FY 2001 RDT&E, ARMY
PROGRAM ELEMENT DESCRIPTIVE SUMMARIES

INTRODUCTION AND EXPLANATION OF CONTENTS

1. General. This section has been prepared for the purpose of providing information concerning the Army Research, Development, Test and Evaluation program. The Descriptive Summaries are comprised of R-2 (Army RDT&E Budget Item Justification – Program Element level), R-2A (Army RDT&E Budget Item Justification – project level) and R-3 (Army RDT&E Cost Analysis) Exhibits which provide narrative information on all RDT&E program elements and projects for the FY 1999, 2000 and 2001 time period.

2. Relationship of the FY 2001 Budget Submission to the FY 2000/2001 Budget submitted to Congress. This paragraph provides a list of program elements restructured, transitioned, or established to provide specific program identification.

A. Program Element Restructures. Explanations for these changes can be found in the narrative sections of the Program Element R-2/R-3 Exhibits.

C. Establishment of New FY 2001 Program Elements/Projects. One major system new start is associated with the New Army Transformation and is denoted by a diamond. Minor new initiatives for FY 2001, in addition to Congressionally directed initiatives for FY 2000, are shown below with asterisks. The remaining programs listed are outyear initiatives or restructures beyond FY 2000 or were previously funded from other Defense appropriations.

A. Mission Description and Budget Item Justification: HQDA General Order No. 5, 1 March 1998, designated the US Army Space and Missile Defense Command (USASMDC), the specified proponent for space and National Missile Defense (NMD) and the operational integrator for Theater Missile Defense (TMD). In response to this designation, the Missile Defense Battle Integration Center (MDBIC) and other existing USASMDC elements were reorganized and merged to form the Space and Missile Defense Battle Lab (SMDBL). The SMDBL is chartered to develop warfighting concepts, focus military science and technology research, and conduct warfighting experiments. The reorganization also created the Force Development and Integration Center (FDIC), a major support element of USASMDC. This project funds the FDIC, which was created to execute the specified proponent role of the USASMDC. The FDIC develops space and NMD solutions to Doctrine, Training, Leader Development, Organization, Materiel, and Soldiers (DTLOMS) and executes their implementation. This project funds the production of requirements for hardware and software solutions, the interfaces with technology development, and the development of operational and system architectures for Space, NMD and TMD. In addition, this project funds analysis and experimentation designed to integrate the pillars of TMD (active defense, passive defense, attack operations, and battle management/command, control, communications, computers, and intelligence functions) and to input Army TMD requirements into Joint forums. This program also supports Aviation and Artillery attack operation systems and passive missile defense materiel solutions.

--	------------------------------

BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603308A Army Missile Defense Systems	PROJECT D979
Integration		

COST <i>(In Thousands)</i>	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D979 Tactical Simulation Interface Unit (TSIU)	1445	0	0	0	0	0	0	0	1445

A. Mission Description and Budget Item Justification: As the Army moves toward digitization, Force XXI and beyond, many command and control functions that were once done by grease pencil and map overlays have been replaced by automated, computer controlled workstations. Until only recently, training soldiers on their workstations with realistic simulations was not possible. The Tactical Simulation Interface Unit (TSIU) bridges the gap between the simulation environments and command and control systems by interfacing with simulations compliant with the Institute of Electrical, Electronic Engineer (IEEE) standards governing the use of Distributed Interactive Simulations. The TSIU is a computer "black box" which interfaces, processes, and routes computer-generated simulations to the appropriate Command, Control, Communications, Computers, and Intelligence (C4I) systems. The C4I operator then inputs orders from his workstation, causing the process to be reversed and the simulation to respond accordingly. The TSIU provides the hardware to permit "human in the loop" training to take place using simulations on tactical workstations. The program was accepted as a Warfighter Rapid Acquisition Program (WRAP) initiative, permitting a rapid acquisition of the system to take place.

FY 1999 Accomplishments:

- 1445 Developed and prepared documentation, standards, qualifications, and other requirements taking the TSIU from the research laboratory to an acquisition program. Defined and documented message protocols, linking simulations for aviation, artillery fires, Unmanned Aerial Vehicles, and air defense to tactical message formats, including: Variable Message Format; U.S. Messages Test Format; Moving Target Indicator and Position; Tactical Data Link-B (TADIL-B), Tactical Information Broadcast Services (TBIS), TRAP Data Dissemination (TDDS); Secure Comm Data Link (SCDL); and FAAD Data Link (FDL).

Total 1445

FY 2000 Planned Program: Project not funded in FY 2000

FY 2001 Planned Program: Project not funded in FY 2001

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D988 Range Upgrades	4816	0	0	0	0	0	0	0	4816

A. Mission Description and Budget Item Justification: Project D988 funds completed range upgrades in support of Atmospheric Interceptor Technology flight tests. In late 1999, the U.S. Army Space and Missile Defense Command participated in the second of two flights from Kodiak Island, Alaska, designed to provide an opportunity for demonstrating various elements potentially suitable for incorporation into a ballistic missile defense system. The flight is a follow-on to the successful missile defense risk reduction flight conducted from Vandenberg Air Force Base, California, on November 5, 1997, and the ballistic missile defense demonstration flight conducted from Kodiak Launch Complex, Alaska, on November 5, 1998.

FY 1999 Accomplishments:

- 4816 Support of test infrastructure upgrades for flight tests involving Atmospheric Interceptor Technology (AIT) interceptor components at the Kodiak Launch Complex on Kodiak Island, AK.
- Total 4816

FY 2000 Planned Program: Project not funded in FY 2000

FY 2001 Planned Program: Project not funded in FY 2001

C. Acquisition Strategy: Not applicable beyond FY99.

D989 Nautilus/THEL	12038	18618	0	0	0	0	0	0	30656	
<p>A. <u>Mission Description and Justification:</u> Project D989 funds continue the Tactical High Energy Laser (THEL) Advanced Concept Technology Demonstration (ACTD) and field testing at the High Energy Laser Systems Test Facility (HELSTF). The THEL ACTD is a joint U.S./Israel program to design, fabricate, and test a tactical-sized THEL demonstrator to evaluate the effectiveness of high energy lasers (HELs) to defeat the threat posed by Katyusha and similar short range artillery rockets. The THEL ACTD is an integration effort that supports the active defense pillar of Theater Missile Defense. The Radar Power Technology will develop technology for lighter, smaller, and more fuel efficient radar systems. Acoustic Technology Research will Develop and demonstrate the benefit of acoustic technologies employed on the surface or on airborne platforms to detect and assist in classification of high priority targets and cruise missiles.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 12038 Continued THEL integration and field testing at HELSTF. <p>Total 12038</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 9545 Completion of the THEL system demonstration test and evaluation at HELSTF. • 3818 Radar Power Technology – demonstrate use of distributed power to drive radar sub-array; demonstrate S/N improvement based on advanced signal processing. • 3818 Acoustic Technology Research – Develop experimental hardware and software. Conduct field test for signature characterization. Develop concept for elevated acoustic sensor system to detect stealthy battlefield threats. Develop concept for low frequency acoustic detection system. • 909 Family of Systems Simulators • 528 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR) <p>Total 18618</p> <p>C. <u>Acquisition Strategy:</u> On 18 Jun 99, the THEL contract was restructured to provide a cost sharing arrangement where the US pays 25%, Israel pays 25%, and TRW pays 50% of the cost until the THEL system successfully shoots down a rocket.</p>

D990 Space and Missile Defense (SMD) Integration	2983	28900	3398	3566	3847	9145	9158	Continuing	Continuing	

A. Mission Description and Justification: HQDA General Order No. 5, 1 March 1998, designated the US Army Space and Missile Defense Command (USASMDC), the specified proponent for space and National Missile Defense (NMD) and the operational integrator for Theater Missile Defense (TMD). In response to this designation, the existing USASMDC elements were reorganized and merged to form the Force Development and Integration Center (FDIC). This project funds the FDIC, a major support element of USASMDC, created to execute the specified proponent role of USASMDC by developing space and NMD solutions to Doctrine, Training, Leader Development, Organization, Materiel, and Soldiers (DTLOMS) and execute their implementation. This project funds the production of requirements for hardware and software solutions, interfaces with technology development, and development of operational and system architectures for Space, NMD and TMD. In addition, this project funds analysis and experimentation designed to integrate the pillars of TMD (active defense, passive defense, attack operations, and battle management/command, control, communications, computers, and intelligence functions) and to input Army TMD requirements into Joint forums. These inter-pillar and intra-pillar products, required to accomplish the integrated TMD mission, exceed the scope of other programs. This program also supports Aviation and Artillery attack operation systems and passive missile defense materiel solutions. The Microelectromechanical System (MEMS) program will develop generic packaging technologies applicable to a wide array of MEMS structures and applications. The program will define and demonstrate these packaging technologies on a MEMS monitoring system for space and missile defense applications. The MSI program will demonstrate the enhanced detection of weapons of mass destruction using miniature sensor designs and rapid methods.

FY 1999 Accomplishments:

- 2983 Developed and published FM 40-1 (JTAGS Operations), TP 525-91 (TMD Integrating Concept) and Theater Missile Defense (TMD) Master Plan. Developed and established the Army Space Master Plan, the Functional Area (FA) 40, Space Operations Officer Personnel Proponency Office and began developing the FA 40 Training Course. Participated as Army Lead in Joint TAMD and JMAA processes. Completed the NMD ORD.

Total 2983

FY 2000 Planned Program:

- 3116 Space and Missile Defense - Plan, develop, and execute concepts and DTLOMS solutions for Space and NMD. Represent users of space and NMD in development of operational and training requirements and test and evaluation to include SBIRS, M3P/JTAGS and space control capabilities. Lead Army's efforts in Joint Theater Missile Defense (JTMD) architecture development. Expand Space and TMD Master Plans to the 2010 time frame. Sponsor exploration of future space and missile defense warfighting efforts. As the FA 40 personnel proponent, ensure that the Army's Space Operations Officers are thoroughly trained and assigned effectively to meet the needs of Joint and Army commanders.
- 6223 Microelectromechanical System - Define opportunities for MEMS packaging. Initiate tasks in development of packaging demonstration.

February 2000

BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603308A Army Missile Defense Systems Integration	PROJECT D990
--	---	------------------------

FY 2000 Planned Program: (continued)

- 1915 Aero-acoustics Instrumentation Technology – Test facility development; high frequency sensor development; and composite structure dynamic pressure instrumentation.
 - 2872 Missile System Integration - Demonstrate a field portable device for detection; complete design of miniaturized sensor; complete rapid spectral analysis method.
 - 14073 Missile Defense Flight Experiment Support – Support flight test experiment in the FY 01 flight from the Kodiak Launch complex.
 - 701 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)
- Total 28900

FY 2001 Planned Program:

- 3398 Space and Missile Defense - Increase FDIC's efforts to plan, develop, and execute concepts and DTLOMS solutions for Space and NMD. Represent users of space and NMD in development of operational and training requirements and test and evaluation to include SBIRS, M3P/JTAGS and space control capabilities. Lead Army's efforts in developing and executing Joint Theater Missile Defense (JTMD) architecture. Expand Space and TMD Master Plans beyond the 2010 time frame. Sponsor exploration of future space and missile defense warfighting efforts. As the personnel proponent for space operations officers, ensure that the Army's Space Operations Officers (FA 40) are thoroughly trained and assigned effectively to meet the needs of commanders.

Total 3398

B. Other Program Funding Summary: There are no other related efforts.

C. Acquisition Strategy: Program is continuous. Various performers will conduct planned accomplishments.

D997 Space and Missile Defense Battlelab (SMDBL)	16647	14010	9175	12194	12564	12810	13114	Continuing	Continuing

A. Mission Description and Justification: Project D997 funds the development of warfighting concepts, focuses military science and technology research, and conducts warfighting experiments, within the Space and Missile Defense Battlelab (SMDBL), (formerly the Missile Defense Battle Integration Center (SMDBIC)). The project will provide users and materiel developer results from experimentation programs, operational analyses, and synthetic battlefield models, simulations, and tools for integrating missile defense and space assets and supporting requirement development activities. The mission of the SMDBL is to integrate space and missile defense into Force XXI/ joint and combined operations through the planning, execution, and analysis of warfighting experiments and technology demonstrations in order to examine advanced concepts and technology which enhance the Commander's capability to fight and win on the 21st century battlefield. This type integration, experimentation, analysis of space and missile defense is not done elsewhere in the Army.

FY 1999 Accomplishments:

- 8938 Conducted experimentation for the following: Army Experiment; III Corps Warfighter Experiment; U. S. Army Central Command Deep Operations Coordination Cell Exercise; Joint Project Optic Windmill; Northern Edge 99; Joint Task Force Exercise; Roving Sands; Ulchi Focus Lens; Battle Command Reengineering experiment; No Horizons Exp; Weather Army Battle Command System Integration; Meteorological Automated Sensor & Transceivers Evaluation; Silent Lightening; and Force Warning Exp. Deployed weather satellite workstation to Albania; developed SMDC Experimentation Campaign Plan, linking Army and Joint Exp. Campaign Plans; developed experiment plans for the Discoverer II Program.
- 950 Completed additional development of the Synthetic Battlefield Environment, to include various interfaces to enhance the realism and fidelity of missile defense training, exercises, and testing. Provided enhancements to the Synthetic Battlefield Center (SBC) to support both customer and internally funded exercises, and warfighter tactical workstation stimulation testing.
- 4816 Conducted stand alone training events, incorporating advanced missile defense hardware/software products linking simulations to tactical workstations, and further enhanced After Action Review (AAR) capabilities for Experiments, Exercises, Training and Analysis. Developed Fire Support Simulation Tools (FSST) and the Digital Battle Staff Trainer (DBST). Developed and field tested prototype simulation and training tools including ARCTIC; Tactical Simulation Interface Unit (TSIU) and the STALKER. "Fly away package" for 32nd AAMDC modernization.
- 1205 Performed space and missile defense studies and analyses, including Space Control Map Exercise DTLOMS solutions for a space threat in the 2010 timeframe; Space Mission Area Analysis; Joint Theater & Air Missile Defense (JTAMD) related analysis; analyses of advanced concepts & technologies. Incorporated existing testbeds and migrated to the DOD's High-level Architecture. Provided modeling, simulation and advanced visualization capabilities for battle lab experiments, trainers, materiel developers and other decision-makers.

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)		DATE February 2000

---	---

COST (<i>In Thousands</i>)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
Total Program Element (PE) Cost	7802	10934	22803	30773	8222	4851	7888	Continuing	Continuing
D005 Landmine Advanced Development	1100	4068	12761	11376	0	0	0	Continuing	Continuing
D606 Countermine/Barrier Advanced Development	6702	6866	10042	19397	8222	4851	7888	Continuing	Continuing

A. Mission Description and Budget Item Justification: This program element provides for advanced development of new mine and countermine systems by prototyping modern munitions technology, advanced development sensors, logic networks, fuzes, power sources, warhead components and modules into complete systems. It provides for advanced development of the Intelligent Combat Outpost (Raptor) which will significantly enhance minefield effectiveness through coordinated attack/tactics and elimination of overwatch forces. It also provides for the initiation and/or continuation of advanced development of the Handheld Stand-off Minefield Detection System (HSTAMIDS), and Ground Stand-off Minefield Detection System (GSTAMIDS).

B. Program Change Summary	FY 1999	FY 2000	FY 2001
Previous President's Budget (FY 2000/2001 PB)	6707	4099	19832
Appropriated Value	6778	11099	
Adjustments to Appropriated Value			
a. Congressional General Reductions	-71		
b. SBIR/STTR	-178		
c. Omnibus or other above threshold reduction		-46	
d. Below threshold reprogramming	+1299		
e. Rescissions	-26	-119	
Adjustments to Budget Years Since FY 2000/2001 PB			+2971
Current Budget Submit (FY 2001 PB)	7802	10934	22803

Change Summary Explanation: Funding - FY 1999: The 1299 increase is the net of a 2700 below threshold reprogramming from PE63619 D005 to PE64619/D088, Wide Area Munition (WAM) and a 3999 reprogramming from PE 64808/D415 to D606 for continuation of HSTAMIDS Program Definition and Risk Reduction (PDRR) effort.
 FY 2001: Increase (+2971) to support Ground Stand-off Minefield Detection System (GSTAMIDS) development; system inflation
 Schedule: Raptor program restructured, PDRR phase completion extended from 4Q00 to 4Q02.

C. Acquisition Strategy: For HSTAMIDS, competing contractors (2) competitively selected for PDRR phase which will lead to a down select for the EMD phase. GSTAMIDS will leverage the Vehicle Mounted Mine Detector ATD effort with two competitively selected contractors for a total of five competing contractors in PDRR. One contractor will continue into EMD. Successful EMD contractors will be awarded initial production contract (sole source) with multiple option year buys.

BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603639A Tank and Medium Caliber Ammunition
--	---

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
Total Program Element (PE) Cost	37302	56286	30139	24056	48704	27332	30472	Continuing	Continuing
D643 Tank Ammunition	20448	36668	30139	24056	48704	27332	30472	Continuing	Continuing
D656 X-ROD	16854	19618	0	0	0	0	0	0	191651

A. Mission Description and Budget Item Justification: The Tank and Medium Caliber Ammunition (TMA) program is a comprehensive development to rapidly field advanced tank, medium caliber and other direct fire ammunition and ensure the continued overmatch lethality of the U.S. maneuver force, despite rapid worldwide development of armored vehicle protection technologies. The TMA program identifies promising technology efforts and uses competitive developments and streamlined acquisition procedures to achieve this goal. Current developments are in the areas of kinetic energy, training ammunition, and smart extended range munitions for existing and future weapons platforms. To date, four rounds of tank ammunition have completed development and entered production. All ammunition development funds within this program element (PE) are managed to facilitate transitions between phases, avoid administrative delays and to focus resources on the most promising areas.

B. Program Change Summary	<u>FY 1999</u>	<u>FY 2000</u>	<u>FY 2001</u>
Previous President's Budget (FY 2000/2001 PB)	35784	36937	42511
Appropriated Value	36026	56937	
Adjustments to Appropriated Value			
a. Congressional General Reductions	-242

BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603639A Tank and Medium Caliber Ammunition	PROJECT D643
---	--	-------------------------------

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D643 Tank Ammunition	20448	36668	30139	24056	48704	27332	30472	Continuing	Continuing

A. Mission Description and Justification: This project provides for the development of all tank ammunition with the exception of the Tank Extended Range Munitions-Kinetic Energy (TERM-KE) formerly known as X-ROD. Providing lethal 120mm munitions is essential in maintaining the overmatch capabilities of the Abrams tank. This point is particularly important since the Army may retain the Abrams Tank for at least the next 20 to 25 years. Ammunition improvements will provide the lethality superiority. The focus of the project is first on the development and production of the M829E3 Kinetic Energy (KE) cartridge. KE cartridges provide the primary anti-tank capability for the armor force. The M829E3 will defeat the growing threat of explosive reactive armor that is increasingly effective against KE penetrators. Additionally, the eventual production of the M829E3 will be critical in maintaining the Depleted Uranium (DU) industrial base. The Army is also developing trainers for the M829E3, and the M830A1 Multi-Purpose Anti-Tank (MPAT) cartridge. The trainers are required since the current trainers, the M865 and M831A1, do not have the required range, flight or physical characteristics to adequately simulate modern tactical tank ammunition and tactical rounds are never used in training. The Army also has a requirement for an Objective Kinetic Energy (OKE) Cartridge for future targets and is in the process of finalizing the requirements for the Tank Extended Range Munitions (TERM). TERM will be capable of engaging targets at extended ranges, either line of sight or beyond line of sight, either autonomously or in conjunction with the Future Scout and Cavalry System (FSCS) and/or any other medium caliber weapon systems. Depending on warfighting and affordability considerations, either TERM or the OKE will begin PDRR development in FY02. The OKE or TERM will defeat advanced active protection systems at extended ranges and be substantially more accurate than current tank ammunition.

FY 1999 Accomplishments:

- 5550 Baselined propellant optimization for M829E3
 - 6896 Optimization of cartridge configuration for M829E3
 - 6169 Baselined penetrator configuration for M829E3
 - 538 STAFF program termination
 - 1295 Initiate risk reduction alternative propellant for M829E3
- Total 20448

FY 2000 Planned Program:

- 13817 Finalization of cartridge configuration for M829E3
- 5464 Test optimized design for M829E3
- 6535 Conduct producibility improvements for M829E3
- 2000 MPAT Trainer Projectile optimization, propellant development and producibility
- 900 Continued risk reduction alternative propellant for M829E3

FY 2000 Planned Program: (continued)

- 7000 Initiate LRKE Trainer Development
 - 952 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) Programs
- Total 36668

FY 2001 Planned Program:

- 15089 Complete build of Production Qualification Test (PQT) Hardware for M829E3
 - 6750 Initiate testing of PQT hardware for M829E3
 - 5400 Finalize Producibility Improvements for M829E3
 - 900 Complete risk reduction alternative propellant for M829E3
 - 2000 MPAT Trainer design and producibility completion; procure propulsion PQT components
- Total 30139

C. Acquisition Strategy: M829E3, MPAT and Long Range KE Trainers, TERM/OKE and STAFF These projects have used a streamlined acquisition strategy since inception. Keeping costs low is paramount while meeting schedule requirements. Integrated Product Teams (IPTs) are being used. A development system contractor, Alliant Techsystems, was selected to develop the M829E3 using a performance specification. Long Range Trainers will be developed using performance specifications and system contractors. Operational Requirements Documents (ORDs) have been approved for M829E3, the two Trainers and Objective Kinetic Energy (OKE). The STAFF closeout occurred in 3QFY99.

A. Mission Description and Budget Item Justification: The X-Rod, now known as the Tank Extended Range Munitions – Kinetic Energy (TERM-KE) is a 120mm tank ammunition development effort which will use a standard kinetic energy penetrator, a rocket motor and a dual mode semi-active laser/millimeter wave radar fire-and-forget guidance. The TERM-KE will provide greater hit probability at extended ranges, both line of sight and beyond line of sight, increasing kill probability and expanding the Maneuver Task Force Commander’s battle space. The TERM-KE is one of two concepts being evaluated in the generic TERM Science and Technology Objective (STO) which is scheduled to down select to a single source in FY02.

FY 1999 Accomplishments:

- 5232 System analysis and system design
 - 3655 Lethality demonstration
 - 4462 Dual Mode Sensor demonstration
 - 3505 Met Unguided All-Up-Round (UAUR) Exit Criteria
- Total 16854

FY 2000 Planned Program:

- 10390 System analysis and system design
 - 1900 Lethality testing
 - 2300 Seeker Captive Flight Test
 - 4500 Ignition/Propulsion Test
 - 528 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) Programs
- Total 19618

FY 2001 Planned Program: Project not funded in FY 2001

B. Other Program Funding Source: Not applicable

---	--	-------------------------------

C. Acquisition Strategy: This program uses a streamlined acquisition strategy. The program is in the Concept Exploration phase. A unique system contracting strategy to prove out innovative component technologies was instituted at inception of the program. A modified Integrated Product Team is being used to leverage the expertise of both the Army and the contractor, Alliant Techsystems. The Army terminated the X-Rod Program in FY96 for affordability reasons. The TERM-KE program has continued through congressional plus-ups. The current program is developing one of the Tank Extended Range Munition (TERM) candidates.

DC03 Medium Armored Vehicle Development*	0	0	109323	168818	74414	0	0	0	352555

*A separate Program Element will be established for the Medium Armored Vehicle Development program. FY 2002 and 2003 funding presently in project DC03 will be realigned to the new PE.

A. Mission Description and Budget Item Justification: This PE supports development of the Advanced Tank Armament System (ATAS) and Family of Medium Armored Vehicles (MAV). The ATAS program develops leap-ahead lethality improvements for tank and medium caliber armored systems and other direct fire systems. ATAS provides gun and fire control technologies that address current materiel needs as well as reductions in Operation & Support (O&S) costs. It provides the assured lethality technology upgrades for legacy systems as well as future platforms to defeat the increasingly more capable armored vehicles of potential adversaries. ATAS develops and combines maturing technology and demonstrates the combined improvements on specific weapon platforms such as Abrams, Bradley, Future Scout and Cavalry System (FSCS), Medium Armored Vehicles, etc. This leverages the technology across platforms and saves RDTE funding for these programs.

An immediate need exists for a MAV equipped C-130 transportable Brigade Combat Team (BCT), capable of deployment to anywhere on the globe in a combat ready configuration. A dynamic asymmetric threat environment demands full spectrum, strategically responsive, agile and dominant land forces. Immediate response by a lethal, versatile, tactically agile joint force capable of operational maneuver once in the Area of Operations is essential to fulfilling the Warfighting needs of the National Command Authority. The MAV equipped BCT is this force. This project will fund the RDT&E tasks necessary to field the MAV as part of the BCT.

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)							DATE February 2000		
BUDGET ACTIVITY 4 - Demonstration and Validation				PE NUMBER AND TITLE 0603653A Advanced Tank Armament System				PROJECT DB99	
COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
DB99 Tank and Medium Caliber Armaments	8464	1922	8816	8791	8780	8759	8739	Continuing	Continuing
<p>A. Mission Description and Budget Item Justification: The program develops leap-ahead lethality improvements for tank and medium caliber armored systems and other direct fire systems. ATAS provides gun and fire control technologies that address current materiel needs as well as reductions in Operation & Support (O&S) costs. It provides the assured lethality technology upgrades for legacy systems as well as future platforms to defeat the increasingly more capable threat armored vehicles.</p> <p>ATAS develops and combines maturing technology and demonstrates the combined improvements on specific weapon platforms such as Abrams, Bradley, Future Scout and Cavalry System (FSCS), Medium Armored Vehicles, etc. This leverages the technology across platforms and saves RDTE funding for programs such as the FSCS and the Medium Armored Vehicles of the Medium Brigade Combat Team.</p> <p>In conjunction with the Marine Corps and the Project Manager for the Abrams Tank, the program will complete the demonstration of an Automatic Target Tracker (ATT) for the Abrams tank in FY00. The ATT increases the tank crew's ability to quickly kill battlefield targets by providing the ability to lock-on and automatically track targets. This automatic lock-on and tracking ability will also reduce gunner training time and associated O&S costs. Completion of the ATT Demonstration was rescheduled to include Marine Corps requirements. Electronic Muzzle Reference Sensor (EMRS) testing for the Abrams tank will finish in FY00. If successful, the EMRS will eliminate the current radioactive tritium light source (and associated environmental issues and O&S costs) in the existing Muzzle Reference Sensor.</p> <p>The program is investigating a German developed gun tube as a potential lethality improvement to the Abrams tank. This long barrel 120mm-gun tube, the L55, is currently being fielded in the German Leopard-2A6 tank. This gun tube will expand the battlespace of the Abrams by allowing the tank crew to kill increasingly more lethal enemy tanks at extended ranges. Watervliet Arsenal (New York) is fabricating the U.S. version called the M256E1. This will be completed in FY01.</p> <p>Also in FY01, potential improvements leveraging available medium caliber technologies will be investigated to improve the Bradley Infantry Fighting Vehicle. Advanced fire control gun/turret drive and stabilization systems are also being developed to control the longer gun tube to meet U.S. requirements. Both the US and German versions will be tested, integrated and demonstrated in an M1A2 Abrams tank. The associated fire control and integration developments can also applied to the current M256 gun to improve fire-on-the-move capability and to prevent the gun tube from impacting the ground while the vehicle is moving cross country.</p> <p>In future years, improved bore coatings and better gun tube manufacturing and straightening techniques will be developed to reduce gun tube life cycle costs and enable the development of more advanced ammunition in the future. Together with other Army organizations, the program is planning the development of Abrams fire control system improvements to allow it to kill enemy targets at much longer ranges with the Tank Extended Range Munitions. A fire control demonstration of an improved position-locating device, coordinate processing software, target data sets and communication processes is planned.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 2550 Completed long gun (L55/M256E1) hardware fabrication & testing • 2450 Completed stabilization/fire control system component fabrication & test for L55/M256E1 • 2000 Continued turret integration of L55/M256E1 • 1464 Demonstrated & tested of L55/M256E1 <p>Total 8464</p>

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)	DATE February 2000
--	------------------------------

BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603653A Advanced Tank Armament System	PROJECT DB99
--	--	------------------------

FY 2000 Planned Program:

- 400 Begin L55/ M256E1 gun barrels & mounting hardware testing
 - 440 Begin L55/M256E1 hardware & software modifications testing
 - 500 Begin L55/ M25E1 tank integration
 - 400 Complete Automatic Target Tracker testing and transfer equipment to FSCS
 - 130 Complete Electronic Muzzle Reference Sensor testing
 - 52 Small Business Innovative Research/Small Business Technology Transfer Program (SBIR/STTR)
- Total 1922

FY 2001 Planned Program:

- 2200 Complete L55/M256E1 gun barrel testing
 - 3200 Complete L55/M256E1 hardware & software integration including M256 work
 - 200 Begin Medium Caliber Testing and Evaluation
 - 3216 Complete L55/M256E1 M1A2 demonstration
- Total 8816

B. Other Program Funding Summary: Not applicable

C. Acquisition Strategy: The technologies in Tank & Medium Caliber Armaments will be demonstrated then transferred to PM Abrams, PM-FSCS and other weapon platform PMs for further technological development and will flow into the next major upgrade or Engineering Change Proposal (ECP) to the current Abrams tank. Several contractors and government agencies are used to develop or integrate existing technologies.

BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603653A Advanced Tank Armament System	PROJECT DC03
---	---	-------------------------------

COST (<i>In Thousands</i>)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
DC03 Medium Armored Vehicle Development*	0	0	109323	168818	74414	0	0	0	352555

*A separate Program Element will be established for the Medium Armored Vehicle Development program. FY 2002 and 2003 funding presently in project DC03 will be realigned to the new PE.

A. Mission Description and Budget Item Justification: This Project (DC03) supports the development of the Family of Medium Armored Vehicles (MAV). An immediate need exists for a Medium Armored Vehicle equipped C-130 transportable Brigade Combat Team (BCT), capable of deployment to anywhere on the globe in a combat ready configuration. A dynamic asymmetric threat and operational environment demands full spectrum, strategically responsive, agile and dominant land forces. Immediate response by a lethal, versatile, tactically agile joint force capable of operational maneuver once in the Area of Operations is essential to fulfilling the Warfighting needs of the National Command Authority. The MAV-equipped BCT is this force. The MAV family includes the following planned systems: Infantry Carrier, Mobile Gun System, Reconnaissance Vehicle, Antitank Guided Missile Vehicle (ATGM), Command and Control/TOC Vehicle, Mortar Carrier, Self-Propelled Howitzer, Engineer Vehicle, Striker/Fire Support Team Vehicle, Nuclear, Biological and Chemical (NBC) Reconnaissance Vehicle, Medical Evacuation/Medical Treatment Vehicle, and Recovery Vehicle. The use of a common platform/common chassis design reduces requirements for repair parts and logistics support in the area of operations. RDTE funding will be used in the short term to address obsolescence and integration issues, to make corrections to vehicle design and for systems design for the interim vehicle. In the mid-term, RDTE funding will be used to design/incorporate fixes for unit identified deficiencies and desired changes, for systems improvements such as digitization, and for system capability enhancements.

FY 1999 Accomplishments: Project not funded in FY 1999

FY 2000 Planned Program: New Army Transformation funding for FY 2000 has yet to be determined.

FY 2001 Planned Program:

- 83645 Continue design/refinement of MAV variants
 - 20542 Systems Testing
 - 5136 Program Management
- Total 109323

B. <u>Other Program Funding Summary</u>	<u>FY 1999</u>	<u>FY 2000</u>	<u>FY 2001</u>	<u>FY 2002</u>	<u>FY 2003</u>	<u>FY 2004</u>	<u>FY 2005</u>	<u>To Compl</u>	<u>Total Cost</u>

C. Acquisition Strategy: In October 1999, the Army leadership announced a vision of the future. This vision includes a Brigade structure and organization which is crucial to the Army's strategic responsiveness goals of deploying from the CONUS base to the global theater of operation one Brigade within 96 hours, one Division within 120 hours, and five Divisions within 30 days. TACOM is taking action to achieve this vision for the Army via accelerated procurement of the family of Medium Armored Project DC03

Vehicles. An RFP will be developed by the end of 2nd Quarter FY00, with a planned contract award in 4th Quarter FY00. Contractors will present their concept for the Brigade Combat Team (BCT). It is currently planned that contract(s) will be awarded for the family of Medium Armored Vehicle Systems to equip the new brigade organization. It is anticipated that the solution to meeting the Program Objective may include the acquisition of: off-the-shelf equipment, non-developmental items, traditional development, systems' integrator (multiple ground combat vehicle and sustainment solutions), systems' integrator (vehicle and non-vehicle solutions; complete brigade support), or a mix of the aforementioned staggered over time and across variants, or other solutions.

D385 JTIDS (LINK 16)	5916	0	0	0	0	0	0	0	5916

A. Mission Description and Justification The Army Data Distribution System (ADDS) consists of the Near-Term Digital Radio System (NTDRS) and the Joint Tactical Information Distribution System (JTIDS)/Multifunctional Information Distribution System (MIDS) programs. The NTDRS program maximizes the use of non-development item (NDI) and commercial off-the-shelf (COTS) hardware and software. The program provides greatly enhanced data capacities at Tactical Operation Centers. NTDRS will provide the Army's Tactical Internet Tactical Operation Center to Tactical Operation Center (TOC-to-TOC) data distribution from Battalion to Brigade and for all mobile TOC platforms from division and below in the First Digitized Division and may serve as proof of concept leading to the integration of the NTDRS waveform/ network into the JTRS program. The Joint Tactical Information Distribution System (JTIDS) / Multifunctional Information Distribution System (MIDS), LINK-16 program is a joint/international program representing all services and allied force requirements with the purpose of complying with the ASD/C3I policy establishing Link-16 as the DOD primary tactical datalink for C2I and to acquire a digital information system for tactical interoperability and situation awareness. Currently the Army uses LINK-16 terminals in Air Defense platforms to control air and missile defense weapon engagement operations. This Program Element, Project D370 also provides support to the Joint Contingency Force (JCF) Exercise in FY2000.

A. Mission Description and Justification: The Near-Term Digital Radio System (NTDRS) provides the Army's Tactical Internet TOC-to-TOC communication function for the First Digitized Division. In order to allow the NTDRS to evolve and make maximum use of technology insertion, NTDRS is based on an open architecture. The project will provide reliable, real time, secure, jam-resistant data communications and position location capabilities to the soldier and to his unit commander and may serve as the proof of concept leading to the integration of the NTDRS waveform/ network into the JTRS program. This Program Element, Project D370 also provides support to the Joint Contingency Force (JCF) Exercise in FY2000.

FY 1999 Accomplishments:

- 8486 Product Development – Engineering
 - 60 Support Costs – Integration and Logistics
 - 719 Test and Evaluation
 - 903 Management Services – Program/Contractor Support
- Total 10168

FY 2000 Planned Program:

- 10 NTDRS Logistics Support
- The balance of FY2000 NTDRS efforts are funded under PE 0604805A, Project D615.
- Total 10

FY 2001 Planned Program:

- 17 NTDRS Logistics Support
- Total 17

B. <u>Other Program Funding Summary</u>	<u>FY 1999</u>	<u>FY 2000</u>	<u>FY 2001</u>	<u>FY 2002</u>	<u>FY 2003</u>	<u>FY 2004</u>	<u>FY 2005</u>	<u>To Compl</u>	<u>Total Cost</u>

* Funding in FY00 is to complete NTDRS program. Funding in FY2001-2005 is for the JTRS-Army program.

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)	DATE February 2000
--	------------------------------

BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603713A Army Data Distribution System	PROJECT D370
---	---	-------------------------------

C. Acquisition Strategy: The NTDRS program maximizes the use of non-developmental item (NDI) and commercial off-the-shelf (COTS) hardware and software. An RDT&E contract was awarded competitively in January 1996. The NTDRS was successfully tested at the Division XXI AWE in November 1997, Electronic Proving Ground (EPG) (Field Test I) in February 1998, and FBCB2 LUT in August 1998. In FY1999 NTDRS was successfully tested at EPG in Feb/Mar 1999 and participated in other experimental exercises, such as the Navy/USMC Urban Warrior and Navy Fleet Battle Experiment Echo. NTDRS successfully provided TOC-to-TOC data communications capability at the NTC-99-05 rotation in March 1999. This is the first digital data network to enable the ATCCS hosts to intercommunicate between Brigade and Battalion and fight the battle-on-the-move, covering a geographical area of over 1800 square kilometers using only 19 radios for the NTC-99-05. In FY2000 the NTDRS will participate in the FBCB2 Field Test II and Limited User Test to provide the Army's Tactical Internet TOC-TOC data communications. The NTDRS will also participate in the Joint Contingency Force (JCF) Army Warfighting Experiment (AWE) to provide TOC to TOC data communications in 4QFY2000. In FY 1999/2000 NTDRS will complete design and testing efforts before planned distribution to the FDD in late FY 2000 for continued experimentation purposes, and may serve as a proof of concept for wideband waveform development in support of the JTRS program.

D. Schedule Profile	<u>FY 1999</u>	<u>FY 2000</u>	<u>FY 2001</u>	<u>FY 2002</u>	<u>FY 2003</u>	<u>FY 2004</u>	<u>FY 2005</u>

BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603713A Army Data Distribution System	PROJECT D385
---	---	-------------------------------

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D385 JTIDS (LINK 16)	5916	0	0	0	0	0	0	0	5916

A. Mission Description and Justification: The Joint Tactical Information Distribution (JTIDS)/Multifunctional Information Distribution System (MIDS)/LINK-16 portion of the ADDS program provides a joint and allied interoperable LINK-16 tactical digital data and voice comm link among air, ground surface and subsurface platforms. LINK-16 is the DoD directed standard for tactical communications of all processed data and is DoD's primary tactical data link for C2I. Link-16 supports the Army's Theater Air and Missile Defense Engagement Operations. The Army intends to migrate to the Multifunctional Information Distribution System (MIDS) through investment in an Army variant of that multi-national terminal.

FY 1999 Accomplishments:

- 246 Product Development
- 1777 Support Costs
- 1710 Testing and Evaluation
- 2183 Management Services – Program, Logistics Support
- Total 5916

FY 2000 Planned Program: Project not funded in FY2000.

FY 2001 Planned Program: Project not funded in FY2001. Future MIDS efforts will be funded under BMDO funding lines.

B. Other Program Funding Summary: Procurement funding resides at BMDO/platform level.

C. Acquisition Strategy: The Multifunctional Information Distribution System (MIDS) program is a Navy managed joint services development program currently viewed as an eventual low cost replacement for parts of the Joint Tactical Information Distribution System (JTIDS) family of high speed data terminals. In FY1999/2000 MIDS will continue developmental and Limited User testing to support a projected FY2000 LRIP Decision and FY2000 LRIP award. FY1999 funding will be utilized in FY2000 to continue program and test efforts until LRIP award. There is no MIDS RDTE funding after FY1999.

A. Mission Description and Budget Item Justification: Provide advanced development for unit/organizational equipment, improved individual clothing and equipment, airdrop equipment, rigid wall and fabric shelters, food and field service equipment which will enhance soldier battlefield effectiveness, survivability, sustainment and quality of life. Program element supports advanced development of a new generation of field service support items and shelters, including collective protection and shelter heaters for unit/organizational use to enhance the quality of life of field soldiers and the ability to project forces to Spartan environments. Program Element (PE) also supports advanced development of individual clothing and equipment items to lighten the soldier's load and incorporate protection against chemical and biological agents, thermal nuclear flash, ballistic threats, visual and electronic detection and environmental hazards. Program Element also supports advanced development of food, packaging, and food service equipment systems to reduce food service logistics for all four services, lighten the warfighter's load, and increase fuel efficiency and to improve or replace existing systems. PE also supports the development of air delivery equipment (personal and cargo) to improve Army force projection capabilities, increase warfighter safety and support national security objectives.

<p>A. Mission Description and Justification: The project funds the development of Joint Service Food/Food Service Equipment to improve individual combat effectiveness and reduce logistics burden and Operation & Support (O&S) costs of subsistence support for service personnel. Enhance rations by increasing quality, acceptability and variety. Develop multi-fuel, rapidly deployable field food service equipment to support combat, humanitarian missions and operations-other-than-war. Improve equipment to enhance safety in food service, utilize battlefield fuel and decrease fuel and water requirements. Program is reviewed and validated twice annually by the Department of Defense (DoD) Food and Nutrition Research and Engineering Board as part of the Joint Service Food Program. Additionally, the project will, conduct advanced development of improved subsistence and subsistence support items to enhance soldier effectiveness and quality of life in all four Services as part of an integrated DoD Food Research, Development, Test, Evaluation and Engineering (RDTE&E) program.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 205 Prepared design concept for Air Force all electric field kitchen system to meet specific deployment requirements of the Air Expeditionary Force. • 392 Evaluated emerging food service equipment technologies and food processes for direct shipboard application to reduce life cycle costs. • 120 Investigated hand sinks, evaluated new tray pack heater, griddle coatings and heat shields for use with fielded food service equipment. • 222 Terminated storage studies/demonstrations of glass coated polymeric tray due to deterioration of glass coating in retorting. Identified self-assembling silica nano-fillers to be used to optimize polymeric tray and ensure long term storage stability of group rations. • 581 Continued to identify and conduct user testing of improvements for individual and group ration systems. Transitioned selected heat and serve ration components and Meals Ready to Eat (MRE) improvements, increasing menu variety and acceptance. Developed prototype lightweight minimal "B" ration system to meet specific Air Force requirements. Developed prototype module of Arctic and Medical group rations for all services. • 296 Completed field tests in different environments to establish effectiveness of selected performance enhancing ration components (PERCs) and supplements, demonstrated overall productivity and suitability of PERCs-based rations and transitioned to procurement. • 267 Completed Phase II of MRE ration redesign for nutritional optimization and logistical parameters. Reported all findings to Joint Services Operational Ration Forum and Food Nutrition Research and Engineering Board. • 416 Developed a baseline on which to design future "on demand" feeding systems to reduce logistical burden. <p>Total 2499</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 110 Develop, fabricate and evaluate improvements to field feeding systems as required by the services and incorporate changes to support ongoing and future procurements. • 459 Develop shipboard applications for state-of-the-art food service equipment technologies and pre-prepared foods. • 372 Conduct design reviews of Air Force all electric field kitchen system and procures long lead items.

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)		DATE February 2000
BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603747A Soldier Support and Survivability	PROJECT D610
FY 2000 Planned Program: (continued)		
•	134 Complete design and field testing of lightweight minimal “B” ration for the Air Force.	
•	665 Continue advanced development of ration components and conduct user testing of improvements for individual and group ration systems. Transition selected heat and serve ration components and Meals Ready to Eat (MRE) items.	
•	424 Develop ration delivery prototype, which incorporates on demand feeding concepts.	
•	238 Initiate polymeric tray optimization efforts, focusing on “drop-in” technology enhancements to the current tray structure in order to ensure storage stability, oven ability, etc.	
•	217 Conduct detailed analysis of accelerated storage data for operational rations to establish a baseline of information, which will be used to develop a predictive model.	
•	146 Develop a management decision document that allows leaders to incorporate conceptual and quantitative variables in decision process prior to development of new special purpose rations.	
•	284 Conduct Market Investigation and requirements development for the Battlefield Kitchen to replace the Mobile Kitchen Trailer. Prepare solicitation for combined R&D and Production Contract.	
•	48 Small Business Innovation Research/Small Business Technology Transfer (SBIR/STTR) Program	
Total	3097	
FY 2001 Planned Program:		
•	113 Develop, fabricate and evaluate improvements to field feeding systems as required by the services and incorporate changes to support ongoing and future procurements	
•	407 Continue assessment of new food technology and food service equipment technologies and complete shipboard evaluations.	
•	436 Complete fabrication and conduct DT/OT of Air Force all electric field kitchen system.	
•	207 Develop a Marine Corps 8x8x10 refrigerated ISO container to improve efficiency and reduce weight to cube ratio and maintenance requirements.	
•	813 Continue improvement of individual and group rations and conduct field test of transitioning technologies to include irradiated foods, high frequency processed items, and innovative packaging systems.	
•	429 Conduct field demonstration of the efficiency of an alternative ration delivery prototype.	
•	285 Complete investigation of mono layer/high impact alternates to current polymeric tray. Initiate Technical Tests of prototype trays.	
•	520 Design Battlefield Kitchen to replace the Mobile Kitchen Trailer. Initiate fabrication of prototypes.	
•	170 Conduct storage studies of microbiological and sensory evaluations on operational ration components to correlate with baseline date.	
Total	3380

BUDGET ACTIVITY 4 - Demonstration and Validation				PE NUMBER AND TITLE 0603774A Night Vision Systems - Advanced Development				PROJECT D131	
<i>COST (In Thousands)</i>	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D131 Night Vision Systems Advanced Development	2240	3164	10968	12698	11677	5373	5339	Continuing	Continuing
<p>A. <u>Mission Description and Justification:</u> The key objective of this program is to demonstrate and validate improvements to Night Vision Electro-Optic devices/systems for acquisition and engagement of enemy targets at maximum weapon system ranges under degraded battlefield/weather conditions and in countermeasure environments. This project provides the funding necessary to implement advances for product improvement or horizontal technology integration (HTI) to upgrade current capabilities in the future. The efforts are centered around development of improved electro-optic sensors, countermeasures and laser systems capabilities for the individual soldiers and combat vehicles to meet stated Army deficiencies such as fratricide reduction.</p> <p>This project also provides for Program Definition and Risk Reduction (PDRR) of Prophet Unmanned Aerial Vehicle (UAV). Prophet UAV will replace currently deployed divisional assets. This will be the Division and Armored Cavalry Regiment Commanders principal SIGINT and Electronic Warfare (EW) System. It will be designed to support Army XXI and beyond. Prophet will provide the Tactical Commander with an enhanced capability for situational awareness, electronic Intelligence Preparation of the Battlefield (IPB), battlespace visualization, target development, and force protection throughout the division's width and depths as defined in Army XXI. The Prophet system will interface with the division and armored cavalry Analysis Control Element's (ACE) All Source Analysis System (ASAS) as well as the maneuver brigade Analysis Control Team's (ACT) Common Ground Station (CGS) and/or ASAS-Remote Work Stations (ASAS-RWS) providing near-real-time (NRT) digital inputs to the common operating picture (COP).</p> <p>The Prophet System components will include a ground-sensor, an air sensor and a control facility. Key operational (and doctrinal) features will be the remote control of airborne sensors and electronic mapping of the enemy's communications and radar systems in the Division's Area of Operations. The Prophet System will also rapidly generate information to identify critical enemy nodes (emitters), and then develop locations that assist in targeting by EW or by division assets. The Prophet System is needed to counter the communications technology revolution and the current worldwide threat; and to support the current Army mission, doctrine, priorities, and requirements.</p> <p>FY01 funding supports the Program Definition and Risk Reduction (PDRR) phase for Prophet UAV. The Prophet UAV EMD efforts are covered under PE/Project 64270/L12.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 510 Completed development of backside illumination laser protection for HTI SGF ground "B" Kit to be integrated into M2A3, M3A3, M1A2 SEP, and LRAS3.

PE NUMBER AND TITLE 0603774A Night Vision Systems - Advanced Development		PROJECT D131
•	25 Completed Interface Control Document (ICD) and connectors for Automatic Target Recognition/Automatic Target Cueing (ATR/ATC) interface capability with SGF "B" kit.	
FY 1999 Accomplishments: (continued)		
•	1337 Initiated and completed sight level demonstration of improved FLIR capabilities (one test unit).	
•	200 Developed HTI Laser designs.	
•	168 Completed development and demonstrated Sensor Risk Reduction Project (SR2P) Testbed for the Future Scout Cavalry System (FSCS) (one test unit).	
Total	2240	
FY 2000 Planned Program:		
•	1292 Develop frontside illumination laser protection and advanced capabilities (i.e., local area processing and frame integration) for high performance systems, such as HTI SGF (five test units).	
•	893 Demonstrate Automatic Target Recognition/Automatic Target Cueing capabilities on LRAS3 (one test unit).	
•	706 Continue HTI Laser activities including design, component solid models, and system fit tests.	
•	188 Continue demonstration of Sensor Risk Reduction Project (SR2P) Testbed with emphasis on user evaluation activities at Fort Hood and Hunter Liggett (two test units).	
•	85 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) Program.	
Total	3164	
FY 2001 Planned Program:		
•	1456 Develop HTI SGF optical and performance capability improvements.	
•	1326 Demonstrate sensor fusion [e.g. I2/thermal and DTV (Day TV)] in a combat vehicle/platform (LRAS3 and/or TUAV) (two test units).	
•	1186 Develop advanced processing capability for SGF "B" Kit (improve low contrast).	
•	1450 Funds will be used in support of the New Army Transformation and to prepare for and Conduct SSEB to award PDRR contract for Prophet UAV.	
•	5550 Funds will be used in support of the New Army Transformation and to award PDRR Contract for Prophet UAV.

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost	
D035 National Defense Center for Environmental Excellence (NDCEE)	0	0	4897	4883	4878	0	0	0	14658	
<p>A. <u>Mission Description and Justification:</u> This Congressionally mandated project is managed by the Army on behalf of the Office of the Deputy Under Secretary of Defense for Environmental Security (DUSD-ES). The mission of the NDCEE is four-fold: (1) Demonstrate and export new environmentally-acceptable technology to the industrial base; (2) train the industrial base on the use of the new technology; (3) perform research and development, where necessary, to mature a new technology prior to demonstrating and exporting the new technology to the industrial base and (4) assist DoD in technology transfer. The NDCEE, which is located in Johnstown, Pennsylvania, has the goal of resolving the environmental technology and management requirements of the DoD community and commercial industrial base. The primary in-house development agency is the U.S. Army Materiel Command's Armament Research, Development, and Engineering Center, Picatinny Arsenal, NJ.</p> <p>The NDCEE has positioned itself as a critical resource for the Deputy Under Secretary of Defense for Environmental Security for environmental management and technology validation and integration. Major programs supported by the Center include the Joint Group on Acquisition Pollution Prevention, Toxics Reduction Investment & Management (TRIM), environmental cost accounting standards development supporting the DOD sustainment community and the DoD fuel cell program.</p> <p>FY 1999 Accomplishments: Program funded in 0708045A, project E31 in FY 1999.</p> <p>FY 2000 Planned Program: An internal reprogramming action is in progress to transfer \$4.8M from PE 0708045A/project E31 to this PE/project for execution.</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 4897 - Support the needs of Army/DOD pollution prevention. <ul style="list-style-type: none"> - Maintain Environmental Technology Facility and continue demonstration of environmentally acceptable technologies. - Support pollution prevention efforts in acquisition. - Evaluate and transition as appropriate sustainable manufacturing technologies such as structural composite materials produced from renewable sources. - Increase capabilities in modeling using existing capabilities in visualization and 3D modeling. - Investigate and transition next generation finishing and coatings removal technologies. - Increase emphasis on water treatment and DOD-specific waste stream recovery and treatment. <p>Total 4897</p>

<p>A. <u>Mission Description and Justification:</u> This program implements the provisions of Title 10 U.S. Code, Section 2350a, Cooperative Research and Development (R&D) Projects: Allied Countries. The objective is to improve, through the application of emerging technologies, the conventional defense capabilities of the United States, the North Atlantic Treaty Organization (NATO), and U.S. major non-NATO allies. This program element only funds the U.S. equitable share of the cooperative R&D project spent in the U.S. Projects are implemented with the allied partners through international agreements which define the scope, cost and work sharing arrangements, management, contracting, security, data protection and third party transfers. By technology sharing the program jointly develops equipment with our allies to improve operational efforts by achieving multi-national force compatibility through the use of similar equipment and improved interfaces. Funds support all the R&D costs including the identification of cooperative opportunities and administration of the program. All funds are used to pay for the U.S. work share in the United States at U.S. Government and U.S. contractor's facilities. This program focuses on international cooperative technology demonstration, validation, and interoperability of the Battlefield Combat Identification System, Force XXI Battle Command Brigade & Below (FBCB2)/Appliqué Systems, Adaptive Digital Beamforming for THAAD radars, helicopter helmet mounted displays, military network switching, Patriot Tactical Operations Center, improved combat vehicle propulsion, missile seeker electronic countermeasures, eyesafe laser radar, artillery command and control, standoff chemical detectors, kinetic energy penetrators, and signal jamming subsystems. The final program will be reported separately as required by 10 USC 2350a(f).</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 2357 Fighting Vehicle Propulsion Technology using Ceramic Materials (Partner: Japan): Continued to develop, test and characterize advance materials including ceramics, high temperature combustion optimization, low heat rejection technology, and advanced friction and wear phenomena. • 345 Focal Plane Array Countermeasures (FPACM) (Partner: United Kingdom): Characterized and assessed advanced focal plane array missile seekers and develop electronic countermeasures (ECM) to defeat them through simulation, modeling and lab testing. • 500 Cooperative Eyesafe Laser Project (CELRAP) (Partner: Japan): Continued to develop a joint performance specification for a multifunctional, eyesafe laser radar for range finding, target profiling, obstacle avoidance, range and terrain mapping. Continued fabricating subsystems and brassboard. • 400 Combat Identification (CI) Interoperability Demonstration (Partners: France, Germany, United Kingdom): Developed a NATO STANAG for CI based upon the Battlefield Combat Identification System (BCIS) and the completed interoperability trials of prototype systems in Munster, GE. • 150 Adaptive Beamforming Technology (ABFT) for Wide Band Phased Array Radars (Partner: United Kingdom): Completed ABFT technology insertion program for THAAD Radar objective system, beamforming algorithms, hardware and software modifications. Published final point design. • 91 Report to Congress: Pursuant to 10 USC 2350a, prepared and provided to USD(A&T) the Army section of the 1999 Report to Congress on the International Cooperative Research and Development Program <p>Total 3843</p>

<ul style="list-style-type: none"> • 950 • 790 • 68 • 50 Total 	<ul style="list-style-type: none"> Command and Control (C2) Systems Interoperability Program (C2SIP) (Partners: Germany, France, United Kingdom): Continue integration work from Battlefield Interoperability Program (BIP), Quadrilateral Interoperability Program (QIP), and the Army Tactical Command & Control Information System (ATCCIS) into an Advance Technology Demonstration (ATD) to achieve NATO levels four (messaging) & five (database) interoperability. This program will transition into the Multilateral Interoperability Program (MIP) in FY 2000. Laser Stand-off Chemical Detector (LSCD) (Partner: France): Continue development of technology that will allow U.S. troops to detect, identify, and quantify chemical agents from a distance by employment of the preferred doctrine of contamination avoidance. Report to Congress: Pursuant to 10 USC 2350a, prepare and provide to USD(A&T) the Army section of the 2000 Report to Congress on the International Cooperative Research and Development Program. Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR) 	
FY 2001 Planned Program:		
<ul style="list-style-type: none"> • 1840 • 80 Total 	<ul style="list-style-type: none"> Multilateral Interoperability Program (MIP) (Partners: Germany, France, United Kingdom, Canada, Italy): Continue integration work from the Command and Control Systems Interoperability Program (C2SIP) into an Advanced Concept Technology Demonstration (ACTD) to achieve NATO levels four (messaging) & five (database) interoperability and also extends the effort into a sustainable program to incorporate lessons learned into national systems. Extends participation to include Canada and Italy. Report to Congress: Pursuant to 10 USC 2350a, prepare and provide to USD(A&T) the Army section of the 2001 Report to Congress on the International Cooperative Research and Development Program.

DB32 Advanced Maintenance Concepts and Equipment	2495	2972	3034	3421	3541	3788	3883	Continuing	Continuing

A. Mission Description and Budget Item Justification: This project enhances utilization of current and future aircraft by improving the efficiency of maintenance and servicing operations by validating new maintenance concepts to improve man machine interface, enhance aircraft maintenance processes and reduce operation and support costs. Included in the project are Digitized Aviation Logistics (DAL) elements such as: Portable Maintenance Aids (PMA), database management software, on-board diagnostics, health/usage monitoring systems, trending analysis, automated data collection and migration, business process reengineering, software integration, and support infrastructure analysis.

FY 1999 Planned Program:

- 175 Completed development and demonstration of Aircrew Maintenance Interface Debriefing System (AMIDS). Demonstrated system for Apache PMO and performed an implementation study for including AMIDS functionality in the Longbow Integrated Maintenance Support System (LIMSS).
- 40 Performed Cost/Benefit analysis on Structural Usage Monitoring System (SUMS) for the MH-47E based upon information gathered during system demonstration.
- 25 Monitored Small Business Innovative Research (SBIR) programs focused on applying acoustic monitoring to the diagnosis of aircraft mechanical system faults.
- 550 Initiated development of a Structural Usage Monitoring System (SUMS) for the Apache Longbow. This system analyzes flight regime and aircraft configuration information to calculate component usage. Detailed requirements have been defined and preliminary design has begun.
- 225 Initiated development of a system for collecting and analyzing data available from the Full Authority Digital Electronic Control (FADEC) on the T55-GA-714 engine. Defined detailed requirements and began preliminary design. Program Name: Aviation Diagnostic & Engine Prognostic Technology (ADEPT).
- 400 Defined plan for demonstrating the use of Automated Identification Technology (AIT) in the Army aviation maintenance process. Effort included technology survey, coordination with other DoD organizations, and detailed program planning.
- 1080 Initiated effort to define, develop, and demonstrate a seamless information system that allows information to flow from on-board aircraft systems, through electronic diagnostic tools, into the larger logistics information system. Effort included assembling a team of Government and industry personnel to define a unit level information system architecture and to define future information requirements for PMs, manufacturers and materiel managers.

--	------------------------------

BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603801A Aviation - Advanced Development	PROJECT DB32
---	---	-------------------------------

FY 2000 Planned Program:

- 1115 Longbow SUMS: complete preliminary and detailed designs, develop software algorithms, and begin field data collection and analysis.
 - 550 ADEPT: complete preliminary and detailed designs, develop software for data collection and trending, begin field data collection and analysis.
 - 450 Define standardized maintenance decision support tools for use by unit level personnel.
 - 661 Begin development of unit level seamless information system.
 - 132 Support AMCOM Automated Identification Technology demonstration effort.
 - 64 Small Business Innovative Research/Small Business Technology Transfer Program (SBIR/STTR)
- Total 2972

FY 2001 Planned Program:

- 502 Longbow SUMS: complete field demonstration and present results to Apache PM.
 - 650 ADEPT: complete field demonstration and present results to Chinook PM.
 - 150 Continue to support AMCOM demonstration of Automated Identification Technology for use in helicopter maintenance processes. Prepare for application to the Longbow Apache.
 - 1088 Continue development of unit level seamless information system by interfacing existing digital information systems and automating maintenance record keeping and support processes.
 - 644 Begin development and demonstration of maintenance decision support tools for use by unit level personnel.
- Total 3034

B. Other Program Funding Summary: None

C. Acquisition Strategy: This project is an aggregate of advanced maintenance concepts-related projects. While the detailed acquisition strategy varies from project to project, the general strategy for each individual project is to complete the development effort through Government test (developmental and operational). Program documentation for milestone decision is prepared, as appropriate, concurrently with the development effort in preparation for program transition to the organization responsible for production and fielding.

<p>A. Mission Description and Budget Item Justification: This project develops equipment, practices, and procedures for the operational improvement of planning, loading, transport, and off-loading of helicopter cargo in all-weather, around the clock combat scenarios. It also replaces obsolete and insupportable ground support equipment with new and standardized multi-output equipment compatible with all Army aircraft models; develops rapid battle repair procedures and tools to speed the return of aircraft to combat ready status; and develops new equipment for aerial recovery of damaged aircraft.</p> <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> • 706 Completed the expert engine/aircraft-interface diagnostic databases, and initiated development of ATEDS for the force modernized fleet • 555 Identified performance requirements and initiated design of replacement for Aviation Ground Power Unit (AGPU) to meet the needs of the force modernized fleet • 260 Complete preliminary design of objective CANDID system, identifying hardware, software, and packaging requirements • 216 Completed installation of ACHS in National Guard aircraft. Initiated system upgrades to a production configuration • 243 Initiate effort to detect, characterize, treat, and prevent hidden corrosion in aircraft structures; building on detection capability being developed under the CANDID effort and the Navy's ongoing treatment and prevention activities • 266 Completed fabrication, tested and accepted non-compliant system (ACDS). Initiated additional testing of prototype to clarify requirements. • 50 Completed CMEP power electronics, completed vehicle installation kit, installed in vehicle, and test <p>Total 2296</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 329 Develop and execute an acquisition strategy to identify source that meets the Army ACDS requirement. Conduct laboratory tests • 514 Complete detail design of CANDID hardware and software, and fabricate 3 prototype systems • 561 Completed fabrication and test AGPU replacement prototype system. Initiate fabrication of 2 additional prototypes and initiate field tests • 285 Resolve interface issues with ACHS and internal fuel tanks. complete system upgrades to a production configuration. Conduct qualification testing of ACHS subsystems. • 605 Complete detail design of ATEDS hardware and software and initiate fabrication of prototype hardware. Initiate field demo. • 389 Identify corrosion causing parameters and develop algorithm to calculate degree of corrosion development, initiate detail design efforts of corrosion environment monitoring system. • 57 Small Business Innovative Research/Small Business Technology Transfer Program (SBIR/STTR) <p>Total 2740</p>

BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603801A Aviation - Advanced Development	PROJECT DB33
--	--	------------------------

FY 2001 Planned Program:

- 262 Conduct field testing of prototype CANDID systems and develop product/performance specification for follow on procurement
- 777 Complete field tests and develop production acquisition strategy for AGPU replacement.
- 425 Expand ACHS I efforts to meet identified deficiencies through initiation of additional technology development (ACHS II) in the areas of remote external cargo monitoring, high capacity external cargo winches, and automated weight and balance subsystems
- 787 Complete fabrication of ATEDS prototypes and complete field evaluation
- 348 Complete detail design efforts, fabricate corrosive environment monitoring system and conduct field evaluation.
- 215 Conduct field tests of ADCS
- Total 2814

B. Other Program Funding Summary: None

C. Acquisition Strategy: This project is an aggregate of advanced mission support and cargo handling concepts-related projects. While the detailed acquisition strategy varies from project to project, the general strategy for each individual project is to complete the development effort through Government test (developmental and operational). Program documentation for milestone decisions is prepared, as appropriate, concurrently with the development effort in preparation for program transition to the organization responsible for production and fielding.

DB45 Aircrew Integrated Systems - Advanced Development	6205	2943	0	2665	2670	2920	2912	Continuing	Continuing
<p>A. Mission Description and Budget Item Justification: Project DB45 – Aircrew Integrated Systems (ACIS) Advanced Development: This project provides advanced development for those systems and items of equipment that are unique and necessary to the sustainment, survivability, and performance of Army aircrews and troops on the future integrated battlefield and related training missions. Advanced development programs will focus on the development and evaluation of emerging technologies and the adaptation of commercial and nondevelopmental items (NDI) to military requirements. The Air Warrior (AW) program will provide the aircrew with a systems approach to chemical and biological (CB) protection, noise protection, microclimatic conditioning, crash and post-crash survivability, concealment and environmental protection, ballistic protection, night vision capability, heads-up displays, directed energy eye protection, and flame/heat protection. The AW design will improve overall aircrew mission performance, aircrew comfort, aircrew and aircrew station interface, safety, and survivability. The Aircrew Integrated Common Helmet (AICH) program (an Air Warrior program component) is the major information management, control, and aircraft interface for the aviator. The AICH incorporates a helmet mounted display, utilizing Comanche compatible optics and electronics with the advanced HGU-56/P helmet. The Virtual Retinal Display (VRD) development effort evaluates VRD technology for incorporation into helmet mounted displays of Army aircrews. The Virtual Cockpit Optimization Program (VCOP) demonstrates an integrated system providing pilots with improved intuitiveness, sense of awareness, overall aircrew mission performance, aircrew and aircrew station interface, safety, and survivability by providing the pilot with augmented visionics, three-dimensional audio improvements, and visual data regarding aircraft systems status and operation, threat warnings, and improved transition and training of pilots who must operate a number of different aircraft platforms during different missions. This project in this Program Element does not duplicate any aircraft platform program efforts. Both joint and service independent efforts continue to be pursued under the scope of this project.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 2408 Completed basic Air Warrior PDRR effort, and begin studies of emerging technologies for insertion into the basic Air Warrior ensemble • 3797 Began Virtual Cockpit Optimization Program (VCOP) PDRR effort <p>Total 6205</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 2864 Continue Virtual Cockpit Optimization Program (VCOP) PDRR effort • 79 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR) <p>Total 2943</p> <p>FY 2001 Planned Program: Project not funded in FY 2001</p>

C. Acquisition Strategy: DB45 – An Air Warrior Program Definition and Risk Reduction development contract was awarded in FY 97 to perform a functional requirements analysis and consider user requirements and available technologies to optimize recommended alternatives within the constraints of cost as an independent variable. The Air Warrior basic ensemble program was approved to proceed into an engineering manufacturing development system life cycle phase in 1st Quarter, FY 1999. Currently, a combined government and contractor team is developing Air Warrior improvements and integrating those components into a basic Air Warrior ensemble that will be integrated with the force modernization aircraft. Prototypes will be developed that represent the basic Air Warrior ensemble for test and evaluation. The Air Warrior aircraft platform specific nonrecurring production engineering will begin during FY 02 in preparation for basic ensemble production, aircraft integration, and fielding. Through a combined government and contractor team, the Virtual Cockpit Optimization Program Definition and Risk Reduction effort will investigate and demonstrate how a future rotary wing crewstation could be crafted to deal effectively with information overload on the digital battlefield.

A. Mission Description and Justification: This project element addresses the modernization of existing Small Arms Weapon systems. This program provides funds to develop existing and emerging technology to enhance lethality, target acquisition, fire control, training effectiveness and reliability for small arms weapon systems and munitions. It also supports development of the Objective Individual Combat Weapon (OICW) which represents the next generation individual soldier's weapon and provides the soldier with significant increases in individual weapon performance. In addition, it supports development of the Shoulder-Launched Multipurpose Assault Weapon in FY01 and the Mortar Systems in FY02 and FY03.

D066 Shoulder-Launched Multipurpose Assault Weapon	0	2943	0	0	0	0	0	0	2943	
<p>A. <u>Mission Description and Budget Item Justification:</u> The Bunker Defeat Munition (BDM) Shoulder-launched Multipurpose Assault Weapon – Disposable (SMAW-D) is being acquired to meet an urgent FORSCOM requirement to fill the “Bunker Buster” void in the Army inventory. The system is effective against various targets including earth and timber bunkers, masonry walls and light armored vehicles at ranges of 15-500 meters. Currently, the system cannot be fired from enclosed spaces. This effort will be to determine the feasibility of adapting the SMAW-CS (Confined Space) propulsion concept developed by Talley Defense Systems, Mesa, AZ, for the U.S. Marine Corps to the SMAW-D. The USMC program has been continually funded since FY 1997.</p> <p>FY 1999 Accomplishments: Project not funded in FY 1999.</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 375 Conduct feasibility study adapting SMAW-CS to BDM CS • 218 Initiate engineering analysis and support • 175 Component testing and evaluation • 50 Conduct modeling and simulation • 500 Fabricate prototypes • 671 Continue feasibility study • 150 Conduct limited test and evaluation • 725 Continue to provide engineering support and analysis • 79 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR) <p>Total 2943</p> <p>FY 2001 Planned Program: Project not funded in FY01.</p> <p>B. Other Program Funding Source: Not applicable.</p> <p>C. <u>Acquisition Strategy:</u> The BDM SMAW-D was Type Classified Limited Procurement in 4QFY94 and was Full Materiel Released in 1QFY00. A sole source Firm Fixed Price contract will be awarded to the contractor to conduct a feasibility study to adapt USMC Confined Space technology to the BDM resulting in a product improved version which would be able to be fired from enclosed spaces. Additional funding would be required to qualify the system and provide for Type Classification.</p>

--	------------------------------

BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603802A Weapons and Munitions - Advanced Development	PROJECT DAS3
---	--	-------------------------------

COST (In Thousands)	FY 1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
DAS3 Objective Individual Combat Weapon	0	0	25886	1985	0	0	0	0	27871

A. Mission Description and Budget Item Justification: Objective Individual Combat Weapon (OICW) –The OICW, which represents the next generation individual soldier’s weapon, will provide the soldier with significant increases in individual weapon performance. The resulting improvement in overall combat effectiveness will include; hit probability, range, lethality, cost per kill, combat load, man/machine interface, sustainability and logistics. The OICW will replace selected M16 rifles, the M4 series carbine and the rifle mounted M203 40mm grenade launcher; as well as night vision devices and laser range-finders.

FY 1999 Planned Program: Project not funded in FY 1999

FY 2000 Planned Program: Project not funded in FY 2000

Note: OICW will enter Advanced Development in FY00; 14701 is being reprogrammed from PE:0604802A D134 to PE: 0603802A DAS3.

FY 2001 Planned Program:

- 13512 Contract – Ammo/Fuze Development
 - 12374 Contract – Weapon/Fire Control Development
- Total 25886

B. Other Program Funding Summary	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	To Compl	Total Cost
Ammo, E92000 Obj Family of Weapons						2431	2429	139000	143860
RDT&E, PE: 0604802A, D134 OICW		14701	0	25513	22238	19340	14999	1000	97791

C. Acquisition Strategy: The OICW has been demonstrated in an Advanced Technology Demonstration (ATD) in FY 1999. Based on the results of the ATD and the requirements of the final Operational Requirements Document (ORD) for the OICW system, a decision was made to enter the Program Definition & Risk Reduction (PD&RR) phase rather than Engineering and Manufacturing Development (EMD) in FY00. This PD&RR phase (PE: 0603802A DAS3) will be a simulation based acquisition phase which utilizes modeling and simulation while developing, building and testing only the key high technology necessary to conduct Cost as an Independent Variable (CAIV) trade-offs at Milestone II. This phase will produce a near final design for the OICW, as well as, the simulations which will form the basis of the trainers. The PD&RR phase will continue into FY2002. The EMD phase (PE: 0604802A D134) which begins in FY2002 will complete the final design, development and validation of the training simulators and complete the Developmental, Operational, and Live Fire Tests necessary to reach Milestone III in FY06. The FY2000 funding is currently being realigned to conform with this strategy.

A. Mission Description and Justification: This program supports advanced development of new and improved technologies for combat support and combat service support equipment essential to sustaining combat operations. Advancements in airdrop, rigid wall shelters, watercraft, bridging, electric power generators and batteries, potable water, environmental control and petroleum equipment are necessary to improve safety and increase the tactical mobility, operational capability, lethality and survivability on the digital battlefield of the first to fight; and to provide for greater sustainment of all combat forces while reducing the logistics support burden.

BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603804A Logistics and Engineering Equipment - Advanced Development	PROJECT DG11
---	--	-------------------------------

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
DG11 Advanced Electrical Energy Concepts - Advanced Development	1303	988	726	607	1038	639	639	Continuing	Continuing

A. Mission Description and Budget Item Justification: This project provides advanced development for electrical energy devices to improve soldier mobility, readiness and survivability. This project supports initiatives which will lead to tactical electric power procurements in diesel powered generators and power units/power plants rated at 3-920 kilowatts (kW) with higher efficiency, lighter weight, easier maintainability and higher reliability.

FY 1999 Accomplishments:

- 662 Procured and began evaluation of permanent magnet generators, associated electronics and other subsystems for 5-60kW generator sets.
 - 641 Initiated testing of components and subsystems for 5-60kW generator sets.
- Total 1303

FY 2000 Planned Program:

- 380 Complete test and evaluation of commercial components/subsystems for 5-60kW generator sets.
 - 528 Complete system designs for fabrication of proof of concept systems for 5-60kW generator sets.
 - 56 Initiate fabrication of prototypes per system designs. (Quantity 4)
 - 24 Small Business Innovative Research/Small Business Technology Transfer programs.
- Total 988

FY 2001 Planned Program:

- 176 Complete 5-60kW generator prototypes. (Quantity: 4)
 - 550 Begin test and evaluation of prototype systems.
- Total 726

<p>A. <u>Mission Description and Justification:</u> Working with both the user and industry, this program stays abreast of current needs and available technologies to be integrated into military Materials Handling Equipment (MHE). Categories of MHE include warehouse forklifts, cranes and tow tractors, rough terrain forklifts, container handlers and cranes as well as ancillary equipment. This program develops selected technologies and transitions to procurement a series of Material Handling Equipment items.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 33 Conducted market investigation for electric forklifts and rough terrain container crane (RTCC) spreader bars. • 32 Converted MHE military specifications to performance specifications. • 30 Conducted market investigation to reassess All Terrain Lifting Army System (ATLAS) design requirement for FY01 followon buy. <p>Total 95</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 33 Initiate preparation of acquisition package for 50k Rough Terrain Forklift (RTFL). • 33 Conduct market investigations for Container Handling Equipment. • 36 Investigate productivity enhancements to existing military variable reach forklifts. • 3 Small Business Innovative Research program. <p>Total 105</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 64 Conduct market investigation to assist in defining the performance characteristics of Container Handling Equipment and Materials Handling Equipment. • 60 Perform engineering investigation of new technologies which will increase the performance capabilities of existing MHE to meet unique military requirements. • 64 Develop program documentation and performance specifications to reflect data obtained during Market Investigation Efforts. <p>Total 188</p>

D266 Airdrop Equipment Advanced Development*	4419	0	0	0	0	0	0	Continuing	Continuing

*Note: Project D266 was moved to PE 0603747A beginning in FY2000.

A. Mission Description and Justification: Conduct demonstration and validation of aerial delivery systems for equipment and personnel, with emphasis on reduced incidence of injuries, improved safety and accuracy, and increased survivability of aircraft, equipment, and personnel.

FY 1999 Accomplishments:

- 1325 Conducted Design Validation of Advanced Tactical Parachute System.
 - 700 Procured Extraction Parachute Jettison System test items; Conducted Technical Feasibility Testing; Modified test items
 - 150 Conducted Milestone I/II for the Extraction Parachute Jettison System.
 - 750 Conducted Developmental Testing for Extraction Parachute Jettison System; obtained interim tri-service hazard classification for pyrotechnic device and completed Safety of Flight Testing and Electromagnetic Interference Testing.
 - 314 Initiated Dual Row Airdrop System effort. Conducted Market Investigation and initiated procurement of test items.
 - 538 Conducted planning for Component and System Feasibility Testing for Dual Row Airdrop System.
 - 642 Conducted Dual Row Airdrop System Component Testing.
- Total 4419

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)							DATE February 2000			
BUDGET ACTIVITY 4 - Demonstration and Validation				PE NUMBER AND TITLE 0603804A Logistics and Engineering Equipment - Advanced Development				PROJECT D526		
COST <i>(In Thousands)</i>	FY 1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost	
D526 Marine Oriented Logistics Equipment Advanced Development	10577	4368	2302	2004	1791	3827	3913	Continuing	Continuing	
<p>A. <u>Mission Description and Justification:</u> Provides funds for the advanced development and definition of equipment in support of the Army's Logistics-Over-The-Shore (LOTS), In-theatre Port Control, and Intercoastal/Riverine Logistics missions. FY 99 funds supported Army's share of the Joint Modular Lighterage System (JMLS). This program, managed jointly with the Navy, will improve cargo offload speed under normal sea states and allow for successful offload under challenging sea state conditions. These efforts will significantly improve operational capability and flexibility. Funds permit efforts to develop joint plans and materiel in conjunction with the Navy and Marines, truly integrating Logistics Over The Shore (LOTS) capabilities. Project funds are also serving to support conceptual development of the Rapidly Installed Breakwater (RIB). This project will also assist the Army to conduct LOTS exercises under adverse sea state conditions. Together, these efforts will extend capabilities of the joint Army/Navy LOTS program, and allow the Army to proceed with deployment of forces under less than ideal sea and weather conditions. For 00 this project also includes \$2M for the Real Time Automatic Cargo Container Tracking & Control System (RTACTCS). RTACTCS is being implemented in Seattle Terminal 5, operated by APL (American President Lines). Its purpose is to track all containers and chassis entering/exiting the Terminal by truck, containers entering/exiting the Terminal by rail, and all containers entering/exiting Terminal by sea. The continuous spotting and tracking of containers is accomplished as a transparent by-product of normal work-in-process of container handling procedures. In addition, the FY 00 Program initiates the definition of the Port Communications and Control Center (PCCC). The center will track and direct the progress of vessel movements and loading/unloading during LOTS operations. The PCCC program will provide for the safe and efficient management of Army and Joint Port Operations during deployment of forces; both under degraded/non-existent port conditions and in adequate port facilities. FY 00 efforts will also focus on the planned Theatre Logistics Vessel (TLV). The TLV will operate at much greater speeds than current Army Watercraft, thus greatly improving the speed of Army combat mobilization in theatre. The FY 01 program will begin advanced development and limited prototyping to define program parameters and performance characteristics for the Landing Craft Utility (LCU) 2000 Extended Service Program (ESP). Efforts in the outyears will include a Watercraft Operations and Support (O&S) cost reduction study to identify specific cost-effective efforts which can be undertaken to improve the Army's O&S posture within the watercraft fleet. The study will examine areas such as Fuel Management, Lubrication, Paints, Maintenance Frequencies & Procedures, etc.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 1477 Completed conceptual development of the Rapidly Installed Breakwater (RIB). • 9100 Continued joint program with Navy to develop Sea State 3 Capable Causeways/Lighterage (JMLS) <p>Total 10577</p>

BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603804A Logistics and Engineering Equipment - Advanced Development	PROJECT D526

FY 2000 Planned Program:

- 2000 Real Time Automatic Cargo Container Tracking & Control System (RTACTCS) development & prototyping.
 - 1566 Continuation of Rapidly Installed Breakwater System (RIBS) design.
 - 500 Theatre Logistics Vessel (TLV) design
 - 184 Port Communications and Control Center (PCCC)– Advanced Development
 - 118 Small Business Innovative Research/Small Business Technology Transfer programs.
- Total 4368

FY 2001 Planned Program:

- 600 Completion of Rapidly Installed Breakwater System (RIBS) initial design
 - 1202 Theatre Logistics Vessel (TLV) design
 - 500 Landing Craft Utility, Parameters and Performance Characteristics for ESP/Upgrade
- Total 2302

C. Acquisition Strategy: Support for the Joint Modular Lighterage System (JMLS) is being undertaken with the Navy PM and executed through Navy contract and in-house vehicles. RIB: Engineering work is being accomplished by the Corps of Engineers Waterways Experiment Station (WES) (current developers). However, programmatic documentation for the RIB is being undertaken via competitive contract. PCCC Advanced Development & Prototyping will be undertaken through competitive contract. The current Watercraft Communications, Electronics, & Navigation (CEN) Equipment contractor is Conley & Associates. Navy in-house and contract expertise would be available as well. TLV and LCU efforts will be conducted primarily with the Naval Surface Warfare Center (NSWC). NSWC can call on both in-house and contract resources (based on workload and expertise) to cover Army requirements.

D091 Combat Service Support Control System	12590	11017	13753	8657	8751	8942	8929	8200	210577

A. Mission Description and Justification: Project D091, Combat Service Support (CSS) Control System. The Combat Service Support Control System is an automated command and control (C2) system that supports the CSS component of the Army Battle Command System (ABCS), and provides a critical logistical C2 capability for the Army's Force XXI. It will automate the current manual processes of force level planning and decision-making for commanders and their staffs. CSSCS interoperates both vertically, within the CSS Battlefield Functional Area (BFA), as well as horizontally with the other BFAs; namely, Fire Support, Maneuver Control, Intelligence/Electronic Warfare, and Air Defense. CSSCS implements functionally through use of Common Hardware and Software (CHS), Common Operating Environment (COE), reuse software, and unique application software.

FY 1999 Accomplishments:

- 9175 Completed Version 4.1
- 965 Continued Version 5 development
- 875 Conducted Version 4 continuous evaluation activities
- 1575 Prepared for and conducted Army Warfighting Experiments, implemented FDD enhancements and achieved initial web based technologies

Total 12590

FY 2000 Planned Program:

- 5580 Continue Version 5 development
- 2390 Prepare for and conduct Army Warfighting Experiments and achieve First Digitized Division IOC, transition to web based technologies and continue migration to DII COE
- 2750 Continue Version 4 development
- 297 Small Business Innovative Research/ Small Business Technology Transfer (SBIR/STTR) programs

Total 11017

Spares (BS9706)	164	165	0	0	0	0	0	5755	7639

C. Acquisition Strategy: Acquisition strategy is to pursue a spiral development process, with program development structured to evolve over five versions. Versions 1 and 2 served as proof of principle, and provided initial division level CSS functional capability on common hardware. Version 3 was built on the capabilities of the previous versions and provided an Initial Operational Capability at Division and Corps level, to include initial horizontal interoperability with ABCS systems. Version 4 extends CSSCS to EAC, as well as provides added capabilities at Echelons Corps and Below (ECB). Version 5, the objective CSSCS software, will provide remaining ECB functionality, and extend CSSCS capabilities to joint, allied and coalition forces. TRW is the software development contractor. Lockheed Martin Corporation (LMC) provides training support. Hardware is procured from the Common Hardware/Software-2 (CHS-2) contract with GD-CS.

D. Schedule Profile	<u>FY 1999</u>	<u>FY 2000</u>	<u>FY 2001</u>	<u>FY 2002</u>	<u>FY 2003</u>	<u>FY 2004</u>	<u>FY 2005</u>

COST (<i>In Thousands</i>)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D246 Tactical Communications System-Advanced Development	1722	0	0	0	0	0	0	0	6704

A. Mission Description and Budget Item Justification: This project validated the new Tactical Internet capability required for Force XXI. It provided definition; integration and testing of a mix of mature and prototype products which are used to develop a Tactical Internet capability. The Tactical Internet will be the primary data communications infrastructure at Corps and below for Force XXI and will revolve around interconnecting a mix of existing (e.g.: SINCGARS, SINCGARS SIP, EPLRS, MSE TPN, ETC) and emerging communications devices using gateways and routers. Gateways will also provide the link to strategic levels. This capability will result in the tactical equivalent of the Information Highway and will support key battlefield functional areas to include logistics reporting, telemedicine, etc. The Tactical Internet (TI) will use and leverage commercial network standards and products. The *“Internet Protocol “* (IP) suite will be used to provide seamless communications with the capability to dynamically route data to hosts. It was designed to facilitate technology insertion. The focus of this project was to reduce the technical risk by assembling, integrating, and testing the Tactical Internet components prior to TF XXI, Division XXI, and Corps XXI and beyond. New services and components will be added and tested as required for each iteration leading up to Force XXI. Note: Funding for this project has been transferred to PE/Proj. 0604805/D629, beginning in FY2000.

FY 1999 Accomplishments:

- 402 Integrated new applications and data services for the Tactical Internet (TI). Demonstrated advanced architectural concepts for the TI beyond the First Digitized Division (FDD)
 - 619 Evaluated emerging Internet protocols for use in the TI. Supported the Tactical Internet for FDD fielding.
 - 246 Supported Advanced Technology Demonstrations (ATD) including C2 Protect.
 - 455 Conducted airborne demo of latest NTDR capabilities, using new video equipment. Procured emerging technologies in video/multimedia equipment. Demonstrated networking capabilities of Handheld Multimedia Terminal in airborne platform.
- Total 1722

FY 2000 Planned Program: Project has been transferred to PE/Proj. 0604805/D629.

FY 2001 Planned Program: Pproject has been transferred to PE/Proj. 0604805/D629

B. Other Program Funding Summary: Not Applicable.

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)		DATE February 2000
BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603805A Combat Service Support Control Systems Evaluation and Analysis	PROJECT D246

C. **Acquisition Strategy:** The objective of this program is to validate new TI Capabilities required for Force XXI. In FY97, laboratory integration testing was conducted to reduce risk for Task Force XXI AWE. Similar laboratory testing was performed in FY98 for Division XXI and for the FBCB2 Limited User Test (LUT). In FY99 new services and components will be added and tested to validate critical technologies for Force XXI beyond FDD.

A. Mission Description and Justification: This program element (PE) funds the advanced development (AD) of medical materiel necessary to field an effective capability for counteracting infectious diseases, treating, diagnosing and evacuating combat casualties, and developing operational medical drugs and materiels. The PE funds AD of systems for medical protection against naturally occurring diseases and human immunodeficiency virus (HIV). This includes development and initial human testing of vaccines, prophylactics, and therapeutic drugs. Additionally, the PE supports AD of field medical equipment and drugs essential for combat casualty care on all battlefields and military operations other than war. Systems include resuscitators, blood substitutes, advanced sensors and diagnostic algorithms, field x-ray, field production of medical grade oxygen, intensive care delivery platforms and litters, and hemostatic dressing. The PE also funds AD of systems that provide enhancement of or protection against physiological and psychological factors affecting cognitive and physical performance imposed by military systems, combat operations or the environment. This program is primarily managed by the U.S. Army Medical Research and Materiel Command.

<p>A. <u>Mission Description and Justification:</u> This project funds program definition and risk reduction of candidate medical countermeasures such as vaccines and drugs through safety, immunogenicity, and small-scale efficacy testing in volunteers against naturally occurring infectious diseases of mission-degrading or mission-aborting potential. Work performed in laboratories and among troop populations is directed to prevention, diagnosis, and treatment of viral, bacterial, and parasitic disease to prevent casualties, sustain operational performance, and minimize deaths and disability of armed forces during military operations. Some major contractors are Southern Research Institute, Birmingham AL; South Florida Research Institute, Miami, FL; Institute of Biology for the Army, Rio de Janeiro, Brazil; and Kenya Medical Research Institute, Nairobi, Kenya.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 1834 Completed Phase 2 clinical trial of RTS,S (TRAP) malaria vaccine. • 3 Filed an Investigational New Drug application for the reformulated liquid <i>Leishmania</i> skin test antigen. • 92 Conducted Phase 1 study with reformulated <i>Leishmania</i> skin test antigen. • 142 Continued Phase 2 safety and efficacy field trial for Paromomycin topical antileishmanial cream in Colombia. • 274 Started first year of Phase 1/2 safety and immunogenicity field trial for <i>Shigella flexneri</i> vaccine in Bangladesh. • 142 Completed Phase 1 safety study for <i>Shigella flexneri</i> vaccine in Bangladesh. • 50 Conducted Milestone (MS) I In-Process Review (IPR) for the hepatitis E vaccine program. • 368 Completed dose ranging study (Ghana) for long-term prophylaxis for Tafenoquine, an antimalarial drug. • 67 Conducted a meeting with the Food and Drug Administration (FDA): Endorsed a “fast track” drug development application for Tafenoquine. • 587 Initiated 2-year rat carcinogenicity study for Tafenoquine. <p>Total 3559</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 892 Conduct Phase 1 study to refine dose regimen for RTS,S (TRAP) malaria vaccine. • 148 Complete Phase 2 safety and immunogenicity field trial for Paromomycin topical antileishmanial cream in Colombia. • 30 Conduct market survey for co-development partner for Paromomycin topical antileishmanial cream. • 132 Initiate Phase 2 efficacy field trial for Paromomycin topical antileishmanial cream in France. • 82 Start program for clinical diagnostic assay for <i>Leishmania</i>.

BUDGET ACTIVITY 4 - Demonstration and Validation	PE NUMBER AND TITLE 0603807A Medical Systems - Advanced Development	PROJECT D808
---	--	-------------------------------

- 104 Continue lethal ovitrap for dengue vectors development program.

- FY 2001 Planned Program: (continued)**
- 50 Complete development of human challenge model for the clinical evaluation of the efficacy of dengue tetravalent vaccines.
- 173 Complete sequencing and cloning of dengue types 2, 3, and 4 monovalent vaccines.
- 76 Continue developmental testing of a prototype kit for the rapid detection of *Plasmodium* infected mosquitoes and conduct a MS II IPR.
- 465 Conduct developmental testing of prototype scrub typhus diagnostic device.
- 215 Conduct developmental testing and a MS II IPR of camouflage face paint with insect repellent and reduced infrared signature.
- 50 Conduct a MS II IPR for camouflage face paint with insect repellent and reduced IR signature.
- 325 Conduct developmental testing and a MS II IPR of prototype malaria rapid diagnostic device.
- 174 Continue Phase 1 safety trials on artelnic acid, an antimalarial drug.
- 174 Initiate Phase 2 efficacy trial on artelnic acid.
- 52 Advertise for Cooperative Research and Development Agreement partner on artelnic acid.
- 290 Start first year of Phase 1/2 safety and immunogenicity field trials for *Shigella sonnei* vaccine.
- 50 Conduct a MS I IPR for *Shigella sonnei* vaccine.
- 207 Conduct a MS I IPR and initiate Japanese encephalitis vaccine (improved) program.

- Total 4635

FY 2000 Planned Program: (continued)

- 52 Evaluate the use of commercial Medical Waste Disposal Systems in field military hospitals.
 - 77 Conduct a MS 0/I IPR and initiate advanced development efforts for a 10-week red blood cell storage solution.
 - 81 Small Business Innovative Research/Small Business Technology Transfer Research Programs.
- Total 3974

FY 2001 Planned Program:

- 240 Conduct operational testing and a MS III IPR for the CSTAT device.
 - 404 Conduct development tests of the Next Generation Jet Injector and a MS I IPR.
 - 227 Prepare initial operational test and evaluation for Warrior Medic program.
 - 65 Prepare documentation for FDA submission for TBPS.
 - 1500 Begin low rate initial production and conduct production qualification test for AMEV.
 - 1200 Continue safety and efficacy trials for Hemostatic Dressing, initiate human trials using elective surgery, and conduct an MS II.
 - 112 Continue development of the Ceramic Oxygen Generation System to include testing potential product for durability in the field medical environment and conduct a MS I IPR.
 - 74 Complete user testing of a Field Medical Waste Disposal System.
 - 120 Complete FDA-required in vivo and in vitro testing of a solution capable of maintaining viable red blood cells for a 10-week period.
 - 75 Conduct an MS II IPR for 10-week Blood
- Total 4017

D505 Crusader - Advanced Development	300429	266158	355309	446674	245250	0	0	0	2140620	
<p>A. <u>Mission Description and Budget Item Justification:</u> This program element supports the Program Definition and Risk Reduction (PDRR) efforts for the Crusader – Advanced Development Program. The Crusader system is the Army’s next generation self-propelled howitzer (SPH) and artillery resupply vehicles (RSVs) designed to support Army XXI, Joint Vision 2010 and the Future Army. Crusader will have significantly increased capabilities in the areas of lethality, mobility, survivability, resupply, command and control, and sustainability by capitalizing on emerging, advanced technologies. The SPH will also achieve increased lethality levels through independent operations. The RSV will have significantly increased capabilities in the areas of resupply, mobility and survivability and will provide a single source of ammunition, fuel, propellant and other supplies for the SPH.</p> <p>In consonance with the New Army Vision/Transformation, the Crusader development is being restructured to improve transportability and relevance to the Army’s objective force. The focus of the revised Crusader program is to increase all modes of deployability while retaining all of its Key Performance Parameters. The revised Crusader system will be reduced in weight and volume and employ a change in resupply vehicle philosophy (an equal mix of tracked and wheeled resupply vehicles). The restructured program will leverage the successful development to date and continue development activities that support the revised Crusader concept in conjunction with concept formulation and significant weight reduction initiatives. Major subsystems and technologies remain largely unchanged, but will be repackaged. The program will remain in the Program Definition and Risk Reduction (PDRR) phase to improve deployability and relevance to the Army’s objective force, and transition to Engineering and Manufacturing Development (EMD) in fiscal year 2003.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 264321 Product development: Continued developmental efforts under the Crusader PDRR contract. Continued efforts in support of maturation and continue integration and risk reduction of critical technologies. Initiated long lead item buys. Initiated system prototype fabrication (SPH1/SPH2/RSV1). Completed major component fabrication and demo. Initiated integration and checkout in the Systems Integration Facility (SIF). Selected final System Integration, Assembly, Test and Checkout facility. Delivered RSV- which is the engineering development test article to be used in Automotive Performance/RAM Testing. • 20606 Support and management: Continued project management efforts; to include scientific and engineering analysis, product development team support and engineering management services. • 15502 Test and evaluation: Finalized EDT-A testing. Initiated testing of RSV-. Initiated Safety Certification Activity. Purchased of ammunition and propellant for program testing. <p>Total 300429</p>

D. Acquisition Strategy: On 29 December 1994, a Sole Source-CPIF contract award was made selecting United Defense, Limited Partnership (UDLP) as the prime contractor for the PDRR phase of Crusader. General Dynamics Land Systems (Warren, MI) and General Dynamics Armament Systems (Burlington, VT) are the major sub-contractors in the areas of mobility and resupply respectively. On 19 March 1996, the Army changed the armament system for Crusader from liquid propellant (LP) to solid propellant (SP) as a consequence of cost and persistent technical problems. In June 1996, UDLP selected the government's Advanced Solid Propellant Armament system (XM297 cannon and Modular Artillery Charge System (MACS) as the basis for SP Crusader). On 6 November 1996, TACOM-ARDEC signed a Memorandum of Agreement (MOA) with UDLP establishing a unique teaming arrangement for the Government to provide engineering services to UDLP for the development of the SP

---	--	-------------------------------

armament system. Delay in the decision to switch from LP to SP and alignment of program activities to match fiscal profile required an adjustment in the schedule portion

of the Acquisition Program Baseline (APB). On 23 October 1997, the Office of the Secretary of Defense approved Crusader's revised APB. The revised APB leverages acquisition reform initiatives and features a single continuous objective development path. The seamless transition from PDRR to EMD eliminates inefficiencies in ramping down/up during the milestone decision. The strategy for development of the lightweight Crusader is to build on the successful development to date on major subsystems; e.g. continue development and testing of the XM297 cannon, exercise the resupply subsystem and software in the Systems Integration Facility (SIF), and continue electronics and software development. The strategy is to continue these efforts, without a break, develop weight reduction technologies and initiatives, and re-design the system with the current contractor team.

<p>A. <u>Mission Description and Budget Item Justification:</u> Project D389 - SCAMP Block II: The Single Channel Anti-Jam Manportable (SCAMP) Block II Terminal is a lightweight 12 – 15 lb. manpackable satellite communications terminal to be employed by units that require range extension for command and control communications. Block II will be used by priority ground tactical users to transmit and receive intelligence, situational awareness, and command and control traffic. It will transmit in the Extremely High Frequency (EHF) band and receive in the Super High Frequency (SHF) band. SCAMP Block II will operate over MILSTAR, other MIL-STD-1582 compatible payloads, and the future Advanced EHF payload providing secure voice and data services at data rates up to 64Kbps. SCAMP Block II EHF terminal will provide direct support to the tactical warfighter mobile forces with anti-jam protection, low probability of intercept, and low probability of detection. Engineering Feasibility Efforts (EFE) began in FY96. The FY01 activities include awarding dual source Engineering and Manufacturing Development (EMD) contracts following Milestone II and continuing technology transfer from Lincoln Labs to industry.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 4837 Completed Baseline 0 prototype development • 1010 Tested, evaluated and demonstrated Baseline 0 prototype: (RDTE Test Quantity: 2). • 1602 Commenced Baseline 1 prototype development <p>Total 7449</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 8464 Complete Baseline 1 prototype terminals: (RDTE Test Quantity: 2). • 1178 Test, evaluate and demonstrate two Baseline 1 terminals • 694 RFP/SSEB preparation and documentation for dual source EMD contract award • 286 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR) <p>Total 10622</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 6286 Complete Baseline 1 terminal improvements and conduct MS II decision • 9125 Lincoln Labs and industry contract awards to develop, test and demonstrate 20 Baseline 2 terminals. D. Acquisition Strategy: The SCAMP Block II acquisition strategy is based upon a spiral development approach which allows for the incremental design, development and test of system requirements. Two spiral development phases are being designed, developed and tested by Lincoln Labs during the Engineering Feasibility Phase. Throughout Engineering Feasibility, Lincoln Lab design data is provided to industry through the distribution of CD ROMs. This design information is provided to encourage industry participation in the bidding process for EMD. Following MS II, two contractors will be selected to develop and test EMD terminals during two spiral development phases. Lincoln Labs will continue to work with industry during the first EMD spiral. Following Operational Testing, one of the two EMD contractors will be selected for Full Rate Production. During the Production Phase, 2333 terminals will be produced and fielded.

<p>A. Mission Description and Budget Item Justification: This Program Element (PE) funds the development of avionics systems required to horizontally and vertically integrate the battlefield. Tasks in this PE support research efforts in the engineering and manufacturing development phases of these systems.</p> <p>The Army Airborne Command and Control System (A2C2S) is the Army's <u>only</u> airborne C2 system supporting corps, division, & brigade commanders. This system is critical to enhance the Battle Command Group's ability to effectively perform combat unit operations and serve as a force multiplier in Army XXI. It provides the capability to access the tactical internet to manipulate, store, manage, and analyze situational awareness information, intelligence data, mission plans, and mission progress data to support the command and control decision making process. The A2C2S will provide situational awareness and command & control hosting Army Battle Command System (ABCS) systems such as Maneuver Control System (MCS), All Source Analysis System (ASAS), Advanced Field Artillery Tactical Data System (AFATDS), and Force XXI Battle Command Brigade and Below (FBCB2). The A2C2S provides communications capability that supports deep operations and Stability Augmentation and Support Operations (SASO) with non-line-of site communications such as High Frequency (HF) and Demand Assigned Multiple Access (DAMA) Satellite Communications System Satellite Command (SATCOM). In addition, the system provides digitized battlefield communication links with joint service interoperability and enhanced fire control management with artillery, Longbow Apache, Comanche, and Joint Surveillance Target Attack Radar System (J-STARS).</p> <p>The Improved Data Modem (IDM) is the key link to joining Army Aviation with the digital battlefield and provides digital communication interoperability and flexibility on a fluid battlefield. Developed as an open system architecture, the IDM takes advantage of commercially available software and hardware solutions to enforce common communications protocols and the Joint Variable Message Format (JVMF). IDM improves Army Aviation's lethality and operational tempo through the exchange of fast and accurate data-burst communications through the Army's Fire Support and Tactical Internet (TI), providing seamless communications across the digital battlefield. These RDT&E funds are required to develop and integrate IDM hardware and software interfaces for the CH-47F, embodying the Embedded Battlefield Command (EBC) software. The IDM provides a flexible, software-driven digital messaging system interoperable with existing Battlefield Operating Systems and the Joint Forces.</p> <p>This PE also provides funds to design, develop, integrate, and install Army Aviation Joint Tactical Radio System (JTRS) A-Kits for the AH-64D, SOA, CH-47F, and UH-60Q/L+ aircraft platforms. The JTRS will provide affordable, high-capacity, tactical radios to meet interoperability requirements with all DOD services. The JTRS will provide an internal growth capability through an open systems architecture approach in compliance with the joint technical architecture which improves system performance at minimal cost and effort. The JTRS will provide the much needed wideband waveform capability to facilitate full tactical internet (TI) connectivity. In addition, it will decrease the size, weight, and power requirements associated with discrete legacy radios which already exceed the capability of current aircraft architectures. RDT&E funding is required for systems engineering to develop the system specification and interface control documents for aviation domain JTRS.</p>

Adjustments to Budget Years Since <u>FY 2000/2001</u> PB			+39290
Current Budget Submit (<u>FY 2001</u> PB)	15027	6324	42280

Change Summary Explanation: Funding – FY 2001: Due to Army decision to defer development funding and unplanned changes in digitization initiatives, the Army increased the A2C2S program in FY 2001 by 16452. These funds will be used for the continuation of prototype hardware and software development, integration, and tests.

The IDM program received an FY 2001 increase of 4200 for platform interface software development for processing, displaying, and testing the Joint Variable Message Format messages in the CH-47F.

The FY 2001 addition of 18900 in the JTRS program was a DA plus-up to initiate design and development of the JTRS aircraft A-kits.

D. Acquisition Strategy: This project is comprised of multiple systems: The A2C2S is being developed by the Naval Research Laboratory (NRL). The full production contract will be competitively awarded. The IDM EBC nonrecurring engineering and software development for CH-47F will be performed by Rockwell/Boeing. The B kits will be procured and installed during CH-47F production. JTRS A-Kit hardware, installation, and integration support will be procured from host platform vendor or competitive contractors.

---	---	------------------------

COST (<i>In Thousands</i>)	FY 1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
D538 Kiowa Warrior Live Fire Test & Evaluation (LFT&E)	0	0	532	2335	1871	0	0	0	4738

A. Mission Description and Budget Item Justification: Provides static and dynamic Live Fire Testing and Evaluation (LFT&E) for the Kiowa Warrior aircraft's Mast Mounted Sight (MMS) and main rotor blades. Additionally, quasi-static testing will be accomplished on the rotor blades. The ballistic testing, required by Title X, US Code 2366, is agreed to by the Deputy Under Secretary of the Army, Operations Research (DUSA(OR)) and by the Director, Operational Test and Evaluation (DOTE). The intent of the Code is to correct design deficiencies before entering low-rate initial production. LFT&E has not yet been conducted on Kiowa Warrior aircraft. To complete LFT&E, a ground test vehicle (GTV) will be assembled. The GTV will consist of fully-functional but non-flightworthy airframe and engine parts. No radios, flight instruments, or working mission equipment will be installed. Mission equipment plywood mockups or empty black boxes will be incorporated. The MMS static testing will be off the GTV but the dynamic testing will require the MMS to be mounted on the GTV with engine running and blades turning. The quasi-static testing of the main rotor blades will have loads applied to blade specimens. Munitions to be tested range from 7.62mm to 30mm.

FY 1999 Accomplishments: Project not funded in FY 1999.

FY 2000 Planned Program: Project not funded in FY 2000.

FY 2001 Planned Program:

- 54 Test Planning and Analysis – Operational Test and Evaluation Center (OPTEC), Evaluation Analysis Center (EAC), and Contractors
 - 44 Conduct Test – Army Research Laboratory (ARL)
 - 263 Testing and Support – Bell Helicopter Textron, Inc.
 - 162 Test Analysis – ARL and Others
 - 9 Battle Damage Assessment – US Army Aviation Logistics School (USAALS)
- Total 532

<p>A. Mission Description and Budget Item Justification: This program element provides for the development and operational testing and evaluation of the RAH-66 Comanche and the T800 growth engine. The Comanche is a multi-mission aircraft optimized for the critical battlefield mission of tactical armed reconnaissance. It provides a globally self-deployable attack platform for light/contingency forces. Comanche provides the solution to reconnaissance deficiencies of no night/adverse weather/high/hot/stand-off capability and is a key component on the digitized battlefield in winning the information war. The Comanche is the Army's technology leader and provides significant horizontal technology transfer within the Army and DoD. Project DC72 provides for continued development and qualification of the T800 growth engine and air vehicle support for integration into the Comanche aircraft. Project D2LT includes funding for the operational testing of Comanche to include modeling and simulation accreditation for Early User Test, Limited User Test and Initial Operational Test and Evaluation. Project D327 provides for development of the airframe, mission equipment package, integration and qualification of the complete system to include training and logistic support.</p>

D2LT Comanche Operational Test	0	49	19	716	5942	1169	4798	Continuing	Continuing

A. Mission Description and Justification: This project provides for progressive test requirements in support of the test and fielding of the RAH-66 Comanche helicopter. Requisite activities include Force Development Test and Experimentation (FDTE) I, II, III and IV dedicated to tactics, techniques and procedures, Electro Optical Sensor System (EOSS) Users Survey and Limited User Test (LUT) that provide operational input early in the system's life cycle, the Army Training Evaluation Program (ARTEP) and Initial Operational Test and Evaluation (IOT&E) in support of a Milestone III production decision.

FY 1999 Accomplishments: Project not funded in FY 1999

FY 2000 Planned Program:

- 29 Independent evaluation at contractor test facility in support of LUT
 - 9 Support Comanche Portable Cockpit for Customer Test I
 - 10 Independent evaluation assessment of Mission Equipment Package (MEP) subcomponents at contractor sites
 - 1 Small Business Innovation Research (SBIR) program
- Total 49

FY 2001 Planned Program:

- 19 Independent evaluation at contractor test facility in support of LUT
- Total 19

B. Other Program Funding Summary: There are no other related RDT&E or other appropriation efforts.

C. Acquisition Strategy: This project is for test and evaluation effort to support Comanche acquisition.

A. Mission Description : This program element encompasses engineering and manufacturing development for tactical electronic warfare (EW), signals warfare (SW), aircraft survivability equipment (ASE), battlefield deception, rapid software reprogramming and protection of personnel and equipment from hostile artillery. EW encompasses the development of tactical EW equipment and systems mounted in both ground and air vehicles. The systems under this program provide the Army with the capability to degrade or deny hostile forces the effective use of their communications, countermortar/counterbattery radars, surveillance radars, infrared/optical battlefield surveillance systems and electronically fused munitions. Existing Army EW systems must be replaced or upgraded to maintain their capability in the face of threat technical advancements. This program element satisfies requirements for brigade, division, corps and higher commanders to conduct electronic warfare to meet tactical and Special Electronic Mission Aircraft (SEMA) requirements, attach/scout, and assault/cargo mission requirements. Prophet provides for development of multifunction ground based and airborne intelligence and electronic warfare systems. Trojan developments will complete Proof-of-Principle R&D for specific Trojan applications in advanced threat signals processing and prototype software upgrades; high frequency (HF) algorithms for compact antenna array technology (CAAT) configured into small aperture antenna arrays; search and acquisition capabilities for unattended signal collectors; and new digital intelligence collection, processing and dissemination technology. The ARAT Project will develop, test and equip an Army wide infrastructure capable of rapidly reprogramming electronic combat software embedded in offensive and defensive weapon systems.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604270A Electronic Warfare (EW) Development	PROJECT D2VT
--	---	-------------------------------

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D2VT Advanced Threat Infrared Countermeasures (ATIRCM)/Common Missile Warning System (CMWS) Operational Test	1210	828	0	0	0	0	0	0	2184

A. Mission Description and Justification: This project supports the operational testing for the Advanced Threat Infrared Countermeasures (ATIRCM)/ Common Missile Warning System (CMWS). This project will provide active and passive Infrared Countermeasure (IRCM) protection against infrared guided weapons. The system is designed to meet operational requirements for a modular IRCM system capable of providing awareness and self-protection jamming countermeasures. The system is applicable to the AH-64D, MH-47D/E, MH-60K/L, EH-60, UH-60, and CH-47D aircraft. The program has been designated a tri-service program, with application to the Air Force and Navy aircraft.

FY 1999 Accomplishments:

- 1210 Continue ATIRCM/CMWS operational test support
- Total 1210

FY 2000 Planned Program:

- 806 Continue ATIRCM/CMWS operational test support
 - 22 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)
- Total 828

FY 2001 Planned Program: Project not funded in FY 2001

COST (In Thousands)		FY 1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
DL12	Prophet	11668	21775	4985	1997	29764	19822	44575	Continuing	Continuing

A. Mission Description and Budget Item Justification: This project provides for replacement of the legacy systems Trailblazer, Traffic Jam and Teammate. These systems are currently deployed as divisional assets and will be replaced with the Prophet Ground system. Prophet will be the Division and Armored Cavalry Regiment Commanders principal SIGINT and Electronic Warfare (EW) System. It will be designed to support Army XXI and beyond. Prophet will provide the Tactical Commander with an enhanced capability for situational awareness, electronic Intelligence Preparation of the Battlefield (IPB), battlespace visualization, target development, and force protection throughout the division's width and depths as defined in Army XXI. The Prophet system will interface with the division and armored cavalry Analysis Control Element's (ACE) All Source Analysis System (ASAS) as well as the maneuver brigade Analysis Control Team's (ACT) Common Ground Station (CGS) and/or ASAS-Remote Work Stations (ASAS-RWS) providing near-real-time (NRT) digital inputs to the common operating picture (COP). Tactical Commanders will receive added force protection through Prophets' capability of providing reports of intercepted voice communications to the supported units from the Prophet Ground assets. The Prophet System is needed to counter the communications technology revolution and the current worldwide threat; to support the current Army mission, doctrine, priorities, and requirements.

The Prophet Air program was redirected to a TUAV based platform as part of the new Army Transformation. The Prophet System components will include a ground-sensor, an unmanned aerial vehicle (UAV) and a control facility. They will be developed as two separate contract actions; Prophet Ground and Prophet UAV. Prophet Ground will be developed prior to Prophet UAV. In FY01, the Teammate, Traffic Jam and Trailblazer systems will begin to defield and be replaced by Prophet Ground, due to escalating Operation and Sustainment (O&S) costs and reliability concerns. Prophet Ground will include Electronic Attack (EA) and Low Probability of Intercept (LPI) capabilities. The Prophet Ground system is an integral part of the Army transformation strategy. Prophet UAV will include the remote control of airborne sensors and electronically map the enemy's communications and radar systems in the Divisions' Area of Operations. The Prophet System is required to detect, locate and identify critical enemy nodes (emitters), by EW or by divisional assets.

This PE/Project funds the Prophet Ground EMD efforts through and including FY03. FY04 and beyond, provides for the Prophet UAV EMD phase. The Prophet UAV Program Definition and Risk Reduction (PDRR) phase is covered under PE/Project 63774/131.

FY 1999 Accomplishments:

- 1155 Refurbished HMWWV for Prophet Ground
- 502 Conducted analysis of Electronic Attack (EA) and COMINT Integration into a HMMWV for Prophet Ground
- 6171 Prophet Ground Block I (COMINT) Development and Support
- 965 Conducted Threat Analyses Study for Prophet Ground and Prophet Heliborne
- 638 Conducted EA Characterization Analyses of NDI solutions for Prophet Heliborne

C. Acquisition Strategy: The Prophet Ground Acquisition Strategy is structured to optimize system capability while reducing risk and streamlining business and engineering processes. Prophet Ground consists of three Blocks: Block I, COMINT; Block II, Electronic Attack (EA); and Block III Low Probability of Intercept (LPI). Block I (COMINT) was a sole source effort which leveraged off existing COTS equipment. Block II (EA) will be awarded as a separate contract action in 2Q FY00. Block III (LPI), is expected to be a competitive award.

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)	DATE February 2000
--	------------------------------

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604270A Electronic Warfare (EW) Development	PROJECT DL20
--	---	-------------------------------

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
DL20 Advanced Threat Infrared Countermeasures/ Common Missile Warning Systems (ATIRCM/ CMWS) Development	0	49036	41340	32007	16382	10059	10046	Continuing	Continuing

A. Mission Description and Budget Item Justification: The ATIRCM/CMWS is a U. S. Army program to develop, test and integrate defensive infrared (IR) countermeasures capabilities into existing, current generation host platforms for more effective protection against a greater number of IR guided missile threats than afforded by currently fielded IR countermeasures. The CMWS component systems is a joint U. S. Navy, U. S. Marine Corps, and U. S. Air Force program to develop, test, and integrate common missile warning on tactical aircraft and rotorcraft for IR guided missile threat warning. The ATIRCM/CMWS is the core systems of the U. S. Army's modular Suite of Integrated Infrared Countermeasures (SIIRCM). For the Army, the current IRCM configuration for the fleet helicopters consist of the AN/ALQ-144A for the AH-64 and the UH/MH-60 and the AN/ALQ-156 missile detector and M-130 flare/chaff dispenser for the CH/MH-47. The ATIRCM/CMWS will selectively replace the AN/ALQ-144A, AN/ALQ-156 or AN/AAR-47, and the M-130. For the Navy and the Air Force, no existing equivalent systems exist.

FY 1999 Accomplishments: Project not funded in FY 1999. Funds reside in Project D665 – Aircraft Survivability Equipment Development.

FY 2000 Planned Program:

- 20720 Continue EMD contract for ATIRCM/CMWS
 - 11631 Continue Development Testing for ATIRCM/CMWS
 - 1300 Complete EMD for Advanced Infrared Countermeasures Munitions (AIRCMM)
 - 665 Complete EMD for Advanced Visual Electro-optical Signature Suppression & Analysis (AVESSA)
 - 4194 Continue Modeling & Simulation efforts for ATIRCM/CMWS
 - 6864 Continue Support costs for ATIRCM/CMWS
 - 2371 Continue in-house and program management administration
 - 1291 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)
- Total 49036

FY 2001 Planned Program:

- 11164 Continue EMD contract for ATIRCM/CMWS
- 3000 Continue Modeling & Simulation efforts for ATIRCM/CMWS
- 1000 Initiate AVESSA P3I
- 400 Initiate AIRCMM P3I
- 14680 Complete development testing for the ATIRCM/CMWS

D665 Aircraft Survivability Equipment Development	60263	8380	14731	3117	9978	12915	12925	Continuing	Continuing

A. Mission Description and Budget Item Justification: Aircraft Survivability Equipment Development provides for the development and system integration of Aircraft Survivability Equipment (ASE) to achieve survivability, reduce vulnerability, and enhance combat effectiveness required to fulfill all Army aircraft mission requirements. Equipment developed will increase combat effectiveness and potential for mission accomplishment by reducing or eliminating the ability of threat air defense systems to detect, hit, track, damage or destroy Army aircraft. Developments respond to the approved requirement documents, test and type classification for production and fielding of ASE systems to address infrared, radar, laser and optical/electro-optical directed air defense threats. Efforts in development include new or upgraded systems to counter monopulse, millimeter wave, frequency agile, pulse doppler and continuous wave radars, passive infrared missile seekers and laser directed weapon systems. Continual adjustments are made to this program to meet the changing and evolutionary nature of technology and threat. This program has joint service applications that are coordinated through the Joint Technical Coordinating Group for Aircraft Survivability (JTTCG/AS), as well as NATO applications coordinated through DOD. This project also provides the technical base for electronic warfare equipment for Apache, Blackhawk, Chinook, Comanche and Special Operations Aircraft. The Suite of Integrated Radio Frequency Countermeasures (SIRFC) and Advanced Threat Infrared Countermeasures (ATIRCM) systems are necessary to the survival of the AH-64, MH-47E, MH-60K, RC-12K, EH-60, UH-60 and CH-47D aircraft. The ATIRCM program has been designated a Tri-service program. The SIRFC is an Office of the Secretary of Defense (OSD) oversight program with high joint interest. Air Force Special Operations Command (AFSOC) selected SIRFC as CV-22 EW bus controller and sensor fusion processor. SIRFC EMD schedule is connected to the CV-22 development and test schedule and is monitored closely by US Special Operations Command (SOCOM). Both SIRFC and ATIRCM have application to the Air Force and Navy aircraft. The SIRFC system key capabilities include advanced threat radar warning advanced threat radar jammer, sensor data fusion and lightweight modular design. ATIRCM/CMWS is an integrated Infrared (IR) countermeasure system designed to bring the latest and most sophisticated state of the art technologies available for US Army aircraft to survive on the modern digital battlefield.

- FY 1999 Accomplishments:**
- 34448 Continued EMD of ATIRCM/CMWS
 - 1438 Continued EMD of the AIRCMM
 - 348 Continued EMD of the AVESSA
 - 21054 Continued EMD of the SIRFC
 - 2975 Continued in-house and program management administration
- Total 60263

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604280A Joint Tactical Radio				PROJECT D162																																													
<i>COST (In Thousands)</i>	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost																																												
D162 Joint Tactical Radio System	0	36520	62218	80065	65691	50917	40121	Continuing	Continuing																																												
<p>A. Mission Description and Justification: The mission of the Joint Tactical Radio System (JTRS) Joint Program Office (JPO) is to develop a Software Communications Architecture (SCA) and software waveforms that will enable the Services to acquire a family of affordable, scalable, high-capacity, interoperable Line of Sight (LOS) and Beyond Line of Sight (BLOS) radios. The Army is the Executive Service for this joint program. The singular functionality of current stovepipe systems lacks the connectivity and throughput capacity to support required simultaneous networked voice, video, and data operations with low probability of intercept over multiple frequency bands. Each unique current radio system requires significant allocation of space, weight, power, and cooling on weapons systems platforms, and has a costly logistics infrastructure. These inadequacies are addressed by requirements in the JTRS Operational Requirements Document (ORD). In addition to addressing the problems associated with stovepipe radios, the JTRS program will provide a significant increase in capability while providing a solid foundation for interoperability, and for achieving network connectivity across the RF spectrum. This program element will validate the SCA through hardware and software prototypes. The building of these hardware and software prototypes, using SCA documentation, and the subsequent passing of information between the prototypes and requisite legacy systems will also provide the foundation to validate these prototypes and demonstrate interoperability with each other and with legacy systems. This program element will manage the continual evolution of the SCA, develop a set of software-based tactical waveforms, as described in the ORD, and provide a certification infrastructure for compliance testing of all hardware and software products. The program element also provides a path for advancing technology and resolving problems unique to the military environment. The open standards based SCA will provide the path for future hardware and software growth of delivered systems by allowing the Services to take advantage of advances in technology being driven by the commercial wireless communications marketplace. The overall JTRS program will provide software programmable and hardware configurable digital radio systems that demonstrate increased interoperability, flexibility and adaptability. JTRS will provide the operational forces with an upgraded communications capability for more effective battlespace management and interoperability among Command, Control, Communications, Computers and Intelligence (C4I) Systems supporting the warfighters' goal of realizing a fully digitized battlespace.</p>

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2 Exhibit)	DATE February 2000
---	------------------------------

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604280A Joint Tactical Radio	PROJECT D162
---	---	------------------------

FY 1999 Accomplishments: Project funded in PE 0603280A, project D155.

FY 2000 Planned Program:

- 27329 Validate SCA, using hardware and software waveforms built to SCA documentation. Institute architecture disputes resolution process. Plan for post-MDAP decision program implementation. Conduct market survey.
 - 966 Develop hardware and software waveform certification process, using existing test facilities where possible.
 - 4041 Continue JPO technical support, including systems engineering, spectrum allocation and approval for use, and cryptographic engineering, in support of SCA activities.
 - 3201 Continue JPO program support, including administration, program management, legal, contracting, budget execution and cost estimating activities.
 - 983 Small Business Innovation Research/Small Business Technology Transfer (SBIR/STTR) Program.
- Total 36520

FY 2001 Planned Program:

- 38526 Maintain and evolve the SCA, resolve residual validation issues, begin acquisition of waveforms listed in Table 1 of JTRS ORD.
 - 6817 Provide for technology advancement and problem resolution, to include areas such as multiple independent levels of security (MILS) and network security.
 - 7801 Implement hardware and software waveform certification process (SCA compliance testing).
 - 5545 Continue JPO technical support, including waveform development, systems engineering, spectrum allocation and approval for use, cryptographic engineering and problem resolution and support of SCA activities. Provide SCA guidance to Service program management offices.
 - 3529 Continue JPO program support, including administration, program management, legal, contracting, budget execution and cost estimating activities.
- Total 62218

C. Acquisition Strategy: The JTRS development strategy consists of a three-Step process. Step 1 resulted in a baseline architecture definition. In Step 2, the architecture definition is being developed and validated as the Software Communications Architecture (SCA). The SCA is expected to become the Government and Industry standard for software radios. As such, it will be the basis for acquiring future Department of Defense (DoD) software radios. The validation process will use hardware prototypes and an initial set of software-based tactical waveforms. Concurrently with validation activities, the JPO will conduct a market survey, which will benchmark Industry capabilities with respect to the architecture. At the completion of these activities, a Major Defense Acquisition Program (MDAP) review will be held. Following a successful MDAP

decision, Step 3 activities will begin. The Services will perform acquisition, integration, testing, fielding and training activities. The JPO will continue to maintain and evolve the SCA, acquire waveforms listed in Table 1 of the ORD, and address technology advancement issues. The JPO will provide certification of JTRS SCA compliance for acquired systems and waveforms.

A. Mission Description: This program element funds the development of the All Source Analysis System (ASAS) and Counterintelligence/Human Intelligence (CI/HUMINT) products. The Project Manager Intelligence Fusion provides management oversight of PM ASAS software. ASAS is the automated support system for the intelligence and electronic warfare (IEW) functional area of the Army Battle Command System (ABCS). It is a tactically deployable Automated Data Processing (ADP) system designed to support management of IEW operations and target development in battalions, brigades, armored cavalry regiments, separate brigades, divisions, corps, and echelons above corps. Counterintelligence/Human Intelligence software products are a subsystem to the ASAS and are designed to facilitate the collection, management and dissemination of counterintelligence and Human Intelligence information to the Warfighters.

<p>A. <u>Mission Description:</u> Project DB19 - ASAS Evolutionary Acquisition: This project funds the development of the Army's only tactical intelligence fusion system. The successful execution of military operations requires a flexible and modular intelligence and targeting system that will provide tactical commanders a common view of the battlefield and a means for gaining a timely and comprehensive understanding of enemy force deployments, capabilities, and potential courses of action. The ASAS is a ground based, mobile, command and control, intelligence processing system. ASAS provides automated support to the combat commander in the areas of intelligence collection management, all-source fusion (signals intelligence, imagery intelligence, human intelligence, open source intelligence and measurements and signatures intelligence), target development and situation analysis, single source and multi-source processing, intelligence reporting, electronic warfare/countermeasures, and operational security as well as "digitized Army" automation support to the Army Battle Command System (ABCS). ASAS is providing incremental prototype software for military intelligence operations in the First Digitized Division (FDD).</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 21949 Continued ASAS Block II Evolutionary Acquisition EMD <ul style="list-style-type: none"> -Completed development and testing of (RWS) V4.1, and received approval to field 1, 211 RWS's Army wide -Began incorporating US Message Text Format (USMTF00) message upgrades -Continued rehost and update of All Source intelligence functionality from Blk I -Initiated design efforts for Block II Analysis Control Element (ACE) -Upgraded Communications Control Set (CCS) -Enhanced Remote Workstation (RWS) to meet evolving ABCS 6.X FDD Force XXI capabilities -Completed final assessment of "Year 2000" Proof of Operation, and compliance certification -Developed "ASAS-Light" battalion level software prototype -Provided warfighter training, test support, and Central Technical Support Facility (CTSF) on-site field support for ABCS/FDD -Developed program acquisition decision package for procurement fielding deployment and operational support of RWS -Completed ASAS RWS MS III and fielding to Ft. Hood units -RWS "V1" and "V4" Type Classified "Standard" (Material Release Version 4 software) • 2435 Completed developmental testing of Block II ASAS RWS/V4 • 3183 Quantity of Test Articles: 55 RWSs and 12 ASAS Lights were procured for engineering development and operational testing <p>Total 27567</p>

C. Acquisition Strategy: The ASAS development program will build upon and expand the capabilities and functionality developed and produced in the ASAS Block I System including conversion to the Army Common Hardware/Software and the OSD directed Defense Information Infrastructure Common Operating Environment (DII COE) and Modernized Integrated Database (MIDB). Additional software capabilities include enhanced intelligence and command and control functionality, jump and degraded mode operations, enhanced communications, and improved reliability, supportability and survivability. Emphasizes multiple prototype deliveries and integrated test and continuous evaluation opportunities. Builds upon experience and feedback gained from the fielded ASAS and other tactical prototypes.

--	--	-------------------------------

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
DB41 CI/HUMINT Software Products	5556	3646	1832	2244	2359	2531	2437	Continuing	Continuing

A. Mission Description: Project DB41 - CI/HUMINT Management System (CHIMS): The Counter Intelligence/Human Intelligence (CI/HUMINT) Management System (CHIMS) is the tactical CI/HUMINT subsystem of the All Source Analysis System (ASAS). It meets the automation requirements for Army tactical and strategic CI/HUMINT information collection, investigation, interrogation, operations, document exploitation, and force protection. The total CHIMS automation architecture extends from the ASAS Division and Corps Analysis and Control Element (ACE) to the individual agent/collector. The objective architecture will consist of three sub-elements: 1) ASAS CI/HUMINT Single Source (CI/HUMINT SS) workstation software will provide single source analysis and processing capability at the Corps and Division level. Incoming HUMINT and CI information will be processed to produce intelligence and maintain CI/HUMINT intelligence databases and the Common Operational Picture (COP); 2) Counter Intelligence Operations/Interrogation Operations (CI/INTG OPS) workstation provides automation and analysis capabilities to Military Intelligence units, and to the CI Staff Officer (CISO) at echelons division and above. It provides a common interface to the Defense Counterintelligence Information System (DCIIS); 3) CI/HUMINT teams require two types of automation support. The first, a Team Leader device, is the AN/PYQ-3 CI/HUMINT Automated Tool Set (CHATS). It interfaces with the ASAS Remote Workstation (RWS), CI/INTG OPS workstation and individual CI/HUMINT agents/collectors device. The second, the Individual Tactical Reporting Tool (ITRT) provides a handheld automated collection device for agent/interrogator operations. It provides automation capability to collect, manage, receive, store and export text, electronic data, and digital imagery information. It is also capable of preparing, processing and disseminating standard messages. Also within this budget activity is the Refugee Management and Tracking System (RMAT). RMATs is a Congressionally directed prototype project under the FY99 Kosovo Emergency Supplemental Appropriation.

FY 1999 Accomplishments:

- 2556 Developed and applied functionality enhancements to the CHATS developmental baseline
 - Data handling
 - Messaging
 - Mapping and data presentation
 - Communications
 - Interoperability enhancements
 - Hardware
 - Common hardware baseline
- 3000 Developed the Refugee Management and Tracking System (RMATS)
- Total 5556

--	------------------------------

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604321A All Source Analysis System (TIARA)	PROJECT DB41
---	---	------------------------

FY 2000 Planned Program:

- 250 Develop functionality and system enhancements to the CHATS version 2 for the planned Version 3
 - 651 Develop CI/HUMINT Automated Management Software (CHAMS). CHAMS is a common software baseline for use on CHATS, ITRT, and CI/INTG Opns workstation. Complete development of the ITRT Version 1 agent/interrogator device
 - 224 Continue Counter Intelligence Operations/Interrogation Operations (CI/INTG OPS) workstation software and hardware baseline development
 - 1000 Mature, test and hand off ASAS CI/HUMINT Single Source workstation software
 - 383 Conduct system developmental and operational testing
 - 20 Quantity of Test Articles: up to ten ITRTs will be procured for engineering development and operational testing
 - 1019 Management services and program support for development of products
 - 99 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)
- Total 3646

FY 2001 Planned Program:

- 200 Continue development of CHAMS software baseline
 - 250 Continue developing functionality and system enhancements to CHATS version 2 for the planned Version 3
 - 100 Complete development of the ITRT Version 2 agent/interrogator device
 - 189 Continue CI/INTG OPS workstation software and hardware baseline development
 - 50 Continue system developmental and operational testing support
 - 20 Quantity of Test Articles: Ten enhanced capabilities hand-held computers will be procured for ITRT Version 2 engineering development and operational testing
 - 30 Quantity of Test Articles: Two NT based portable computers for CI/INTG OPS workstation engineering development and testing.
 - 993 Management services and program support for development of products
- Total 1832

--	--	-------------------------------

CI/INTG Ops workstation.

CHATS. Version 1 CHATS will be upgraded with Version 2 hardware during FY00 and FY01. This hardware upgrade will extend the life of Version 1 CHATS hardware until CHATS Version 3 is fielded. CHATS Version 3 development will commence FY00 for issue in FY03-04.

ITRT. The Version 1 ITRT will complete development and initiate issue during FY00. The ITRT is a commercial-off-the-shelf (COTS) hand-held sized automation tool capable of receiving tasking messages, preparing and transmitting CI/HUMINT reports, and disseminating digital imagery to the Team Leader CHATS. The initial issue cycle of ITRT Version 1 will continue through FY01. The first life cycle replacement for the approximately 800 ITRTs with their two year life cycle will be initiated in FY03.

CI/INTG OPS Workstation. FY00-01 will see the development of the initial hardware and software baseline for the CI/INTG OPS workstation on a NT Platform Military Intelligence unit command and control of CI/HUMINT operations. CI/INTG OPS workstation functionality will be interoperable with the ASAS Remote Workstation (RWS) version 6.2 in 4Q00, with a full functionality software baseline that meets mission requirements for both ASAS and CI/HUMINT MI unit's mid-FY02. The CI/INTG OPS Version 2 Workstation will be issued FY03-04 on CHS-II standard hardware. The CI/INTG OPS workstation will reuse significant portions of ASAS Remote Workstation software and leverage existing technology.

ASAS CI/HUMINT SS Workstation. The CI/HUMINT SS Workstation is an ASAS product that will operate within the ASAS ACE. The PM, ASAS is responsible for the ASAS ACE and the integration of the ACE single source modules. PM CHIMS is responsible for the development of the CI/HUMINT single source software module. The ASAS development schedule calls for an initial capability in 3Q00. This CHS-II standard workstation integrates HUMINT into the ASAS common operational picture.

D2FT ASAS Operational Test	2123	2264	0	0	0	0	0	0	4387

A. Mission Description: Project D2FT - ASAS Test and Evaluation: This project finances the direct costs of planning and conducting testing and evaluation of the ASAS by the Army Test and Evaluation Command (ATEC). ASAS is an Acquisition Category (ACAT) II system with several dedicated iterations of Test and Evaluation (Technical and Operational) between FY 95 and FY 02. Testing and evaluations are conducted under conditions, as close as possible, to those encountered in actual combat with typical user troops trained to employ the system. As necessary, ATEC provides Army leadership with an evaluation of effectiveness and suitability of the system. Project D2FT is restructured from PE 0605712A.

FY 1999 Accomplishments:

- 2123 Warfighter data collection; RWS testing; test scenario development

Total 2123

FY 2000 Planned Program:

- 2204 Warfighter data collection; ASAS-Light test events; test scenario development
- 60 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)

Total 2264

FY 2001 Planned Program: Funds moved to PE 0605712A, project 001 due to the redesignation of ASAS to ACAT II program.

B. Other Program Funding Summary: Not Applicable

C. Acquisition Strategy: Not applicable, see B19 above

D013 Modernized HELLFIRE	0	0	4969	6951	15914	53531	74751	Continuing	Continuing
<p>A. Mission Description and Budget Item Justification: Expanding regional power threats require evolutionary improvements to maintain effectiveness of the Hellfire missile system. The Modernized Hellfire missile will provide the Apache Attack Helicopter (AH-64) and the Comanche Reconnaissance Helicopter (RAH-66) with an enhanced fire-and-forget capability, greatly increasing weapon system effectiveness and aircraft survivability. The Modernized Hellfire will effectively engage and destroy advanced armor on the digital battlefield well into the future. The funding in FY 2001 and FY 2002 will be utilized for risk reduction and risk mitigation efforts. Risk mitigation and risk reduction will be accomplished using the latest simulation based acquisition tools and techniques. This simulation based acquisition technique will be concentrated on seekers, propulsion, warhead group and platform integration. Modernized Hellfire will enter Engineering Manufacturing Development (EMD) in FY 2003. Modernized Hellfire missile will be designed and tested to achieve the following: an enhanced fire-and-forget capability, increased range, increased survivability (both missile and platform), decreased timeline, decreased weight, decreased size, and modularity for future enhancements. Modernized Hellfire will be compatible with existing launch platforms and the RAH-66.</p> <p>FY 1999 Accomplishments: Project not funded in FY 1999.</p> <p>FY 2000 Planned Program: Project not funded in FY 2000.</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 3553 Risk Reduction • 664 Support Costs • 214 Test and Evaluation Support • 538 Management Services Support <p>Total 4969</p>

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2 Exhibit)							DATE February 2000		
BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604604A Medium Tactical Vehicles				PROJECT DH07	
COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
DH07 Medium Tactical Vehicles	0	1958	1959	1953	1951	1946	1941	17392	29100
<p>A. Mission Description and Budget Item Justification: This program element (PE) supports modernization of the Army's medium truck fleet. The Family of Medium Tactical Vehicles (FMTV) will replace aging M44 Series 2 1/2 ton trucks and M39 and M809 Series 5 ton trucks that are beyond their average useful life of 20-22 years. FMTV will also provide a follow-on to the M939/A2 Series 5 ton truck. FMTV is required to fill 2 1/2 (LMTV) and 5 ton truck (MTV) requirements, resolve operational deficiencies and operate throughout the theater as multi-purpose transportation vehicles used by combat, combat support and combat service support units. This system is designed to be rapidly deployable worldwide and operate on primary and secondary roads, trails, and cross-country terrain in all climatic conditions. The new funds will support continuous product improvements, technological upgrades and new capabilities for FMTV. In FY00, Project DH07 funds will develop, integrate, and demonstrate a commercial type dump body to address weight and payload concerns. In FY00-02, the funds will develop, build and test a prototype FMTV 5 ton water tanker to support an approved requirement to help execute the Army's potable water support concept for Force XXI. FY00-03 will be used to fund the development of an improved survivability Cab for the safety of the soldier in the expanding role of the FMTV in the peacekeeping mission.</p> <p>FY 1999 Accomplishments: Project not funded in FY 1999.</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 1198 Water Tanker Prototype Design/Major Components Purchase. <p>A. <u>Mission Description and Budget Item Justification:</u> U.S. Forces must be able to effectively neutralize and degrade energy weapon systems and threat electro-optical systems/smart weapons that operate in the full range of the electro-magnetic spectrum. This program element supports the conduct of Engineering and Manufacturing Development (EMD) of logistically supportable, high performance smoke and obscurant agents, munitions and devices to improve the survivability of the combined arms force and complement combined weapons systems. Improvements are sought across the entire multi-spectral range from visual through infrared (IR) and millimeter wavelengths (MMW) radar for incorporation into self-protection large area and projected smoke systems. The smoke obscuration technologies supported by this program element enhance smoke systems as force multipliers.</p> <p>This project supports the conduct of Engineering and Manufacturing Development (EMD) in smoke and obscurant agents, munitions, and devices to improve survivability of the combined arms force, complement combined weapons systems, and enhance force effectiveness and combat power. Funding supports (1) Motorized Dual Purpose Mechanical Smoke Generator, M56 mounted on the High Mobility Multi-Purpose Wheeled Vehicle (HMMWV), the Mechanized version (M58A1) mounted on a tracked vehicle to provide large area visual, infrared (IR) and millimeter wavelength (MMW) radar obscuration, and the new Medium Weight Armored Vehicle platform with all required obscurant capability.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 200 VEESS – Integrated M6 Grenade Dischargers and Vehicle Integrated Defense System. • 459 VEESS – Completed data collection and documentation. <p>Total 659</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 201 MMW – Prepare IPR package and conduct milestone I/II program review. • 195 MMW – Prepare complete contract package, issue draft proposal, conduct pre-proposal conference, issue final proposal, evaluate and award contract • 200 MMW – Conduct prototype evaluation of multiple materials against threat radars. • 300 MMW – Award development contract and initiate prototype designs. • 17 Small Business Innovation Research/Small Business Technology Transfer (SBIR/STTR) programs. <p>Total 913</p>

--	---	-------------------------------

COST <i>(In Thousands)</i>	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D499 Javelin	3996	489	490	489	488	973	971	0	637114

A. Mission Description and Budget Item Justification: This program provides for the continuation of Engineering and Manufacturing Development (EMD) of a manportable antitank weapon system for use by the combined-arms team. The infantry must have the capability to defeat numerically superior armored forces. The present medium infantry antitank weapon is the DRAGON. The system developed within this program element will replace the DRAGON to provide enhanced lethality for the early entry force. It will have a high kill rate against all known armor threats at extended ranges under day/night, adverse weather conditions and in the presence of battlefield obscurants. This system will be hardened against countermeasures and will not require extensive training for effective employment. Active protection system developments will be considered and modifications studied to defeat these devices. This system will include software improvements to maintain lethality against evolving targets and countermeasures and increase robustness of system performance in all environments. This system will also integrate the Warhead improvement into the Baseline Main Charge Warhead (BMCW), and Counter Active Protection System (CAPS)/Tracker software, to include Land Warrior capability.

FY 1999 Accomplishments:

- 997 Program Management
 - 151 Counter Active Protection System Studies
 - 2655 Counter Active Protection System Generation 2 Development (Includes 24 Developmental Test Articles)
 - 193 Baseline Main Charge Warhead (Procurement of 12 Live Fire Test Articles)
- Total 3996

FY 2000 Planned Program:

- 25 Program Management
 - 351 Counter Active Protection System/Tracker Software
 - 100 Warhead Damage Assessment Tests
 - 13 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)
- Total 489

FY 2001 Planned Program:

- 25 Program Management
 - 465 Counter Active Protection System/Tracker Software

D088 Wide Area Munition (WAM)	23825	13218	15902	18853	11897	0	0	0	329557

A. Mission Description and Budget Item Justification: The Wide Area Munition (WAM), a “smart,” remotely-reprogrammable antitank weapon, provides unique control and offensive capability for a variety of missions. WAM will significantly reduce Army losses by using advanced smart munitions technology on the battlefield. The program provides for Engineering and Manufacturing Development (EMD) of the Basic WAM deployed by hand emplacement with one-way communications. The pre-planned product improvement to Basic WAM will be executed in two phases: WAM A1 will provides a two-way command and control and redeployable capability. WAM A2 will provide enhancements to the sublet and gowned platform enhancements to include Global Positioning (GPS) .

FY 1999 Accomplishments:

- 11555 Continued WAM PIP(A1) development of munition receiver, transmitter and control station interface module
 - 2064 Initiated fabrication of Technical Test/Initial Operational Test and Evaluation hardware (20 systems)
 - 2006 Continued System engineering
 - 5700 Continued Ground Platform Module development
 - 2500 Continued Control Station development/integration
- Total 23825

FY 2000 Planned Program:

- 4600 Initiate WAM PIP (A1) TT/IOT&E testing
 - 7162 Continue WAM PIP (A1) system engineering
 - 1100 Continue system performance analysis
 - 356 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) Programs
- Total 13218

FY 2001 Planned Program:

- Complete PIP (A1) TT/IOT&E
3105
- 2340 Complete Compass, GPS integration and testing for A2
- 7061 Initiate ground performance enhancement development (A2)
- 3396 Initiate sublet enhancement development (A2)

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604619A Landmine Warfare	PROJECT D088
---	---	------------------------

Total 15902

B. Program Change Summary	<u>FY 1999</u>	<u>FY 2000</u>	<u>FY 2001</u>
Previous President's Budget (FY 2000/2001 PB)	23036	13318	0
Appropriated Value	23189	13318	
Adjustments to Appropriated Value			
a. Congressional General Reductions	-153		
b. SBIR / STTR	-611		
c. Omnibus or Other Above Threshold Reduction		-54	
d. Below Threshold Reprogramming	+1492		
e. Recissions	-92	-46	
Adjustments to Budget Years Since <u>FY 2000/2001 PB</u>			+15902
Current Budget Submit (FY 2001 PB)	23825	13218	15902

Change Summary Explanation: Funding – FY 2001: Funds (+15902) transferred from WAM production (SSN: E78100) in order to continue PIP EMD effort

C. Other Program Funding Summary	<u>FY 1999</u>	<u>FY 2000</u>	<u>FY 2001</u>	<u>FY 2002</u>	<u>FY 2003</u>	<u>FY 2004</u>	<u>FY 2005</u>	<u>To Compl</u>	<u>Total Cost</u>
Procurement of Ammunition, Army (PAA) And Other Procurement, Army (OPA)									
WAM, E78100 (PAA)	9544	15191	7284	29206	44571	56334	56126	1428667	1686230
WAM Remote Control Unit, G01000 (OPA)	0	0	0	0	3874	3900	3896	0	11670
WAM Individual Trainer, E78103 (PAA)	0	1832	1534	0	0	0	0	0	5185
WAM Collective Trainer, E78104 (PAA)	0	0	0	1942	0	0	0	0	3868

D. Acquisition Strategy: The Basic WAM transitioned to Low Rate Production (LRP) in 3QFY96. A sole source Fixed Price Incentive Fee contract was awarded to the EMD contractor for the LRP quantity. Production buys will be included under the LRP contract as Firm Fixed Price options. A sole source Cost Plus Incentive Fee contract for EMD of an improved WAM was awarded to the Basic WAM developer in FY 1996.

DE50 Trailer Development	3371	0	0	0	0	0	0	0	3371
DE51 Forward Repair System, Heavy	3658	0	0	0	0	0	0	0	3658

A. Mission Description and Budget Item Justification: Program element funds various heavy tactical vehicle capabilities to support combat and combat support missions. These missions include the following: line haul, local haul, and unit resupply; and transporting water, ammo, and general cargo. FY99 Project 659 funding supports the Palletized Load System (PLS) safety enhancements. FY00 Project 659 provides funds for a PLS load handling system-compatible water distributor module for construction applications and replenishment/augmentation of fire-fighting operations. Project E50 funding supports requirements for a Trailer R&D program to demonstrate technologies that support the Army's objectives to minimize operational and support costs, while modernizing trailer systems that provide significant benefits to the Army warfighting capability. Project E50 funding also supports the Heavy Equipment Transporter System highway use Engineering & Manufacturing Development and Trailer Modernization for Fuel Transport. Project E51 funding supports Low Rate Initial Production and Testing on the Forward Repair System (FRS) Warfighter Rapid Acquisition Program.

D586 Air Traffic Control	1550	4911	2026	2189	2285	2565	2659	Continuing	Continuing
<p>A. Mission Description and Budget Item Justification: This program element funds continuous efforts for the development of modernized tactical and fixed base Air Traffic Control (ATC) systems that will enhance and ensure total aviation safety in both the tactical and strategic ATC domains. Primarily funds the total system integration and qualification for the Air Traffic Navigation Integration Coordination System (ATNAVICS). ATNAVICS supports the tactical aviation warfighter at remote landing zones, pickup zones and temporary fixed wing and helicopter operating/landing areas worldwide. FY 99 funds completes the EMD phase for ATNAVICS. Also funded in this program element is the development of the Mobile Tower System (MOTS), a tactical mobile tower designed to replace an antiquated and obsolete legacy system. A Non-Developmental Item (NDI), MOTS will be equipped with modernized and secure avionics to ensure highly reliable and consistent tactical aircraft communications at semipermanent landing areas. Funds for the Mobile Expeditionary Accurate Night Vision Compatible Portable Airfield Lighting System (MEANPALS) will allow PM to initiate the acquisition to procure and evaluate prototype systems. Also, funds are required for AN/ARC220 integration requirements for the Tactical Terminal Control System (TTCS).</p> <p>FY 1999 Accomplishments:</p> <p>ATNAVICS</p> <ul style="list-style-type: none"> • 399 Closed out EMD phase, transition to production phase • 1151 Conducted final operational testing <p>Total 1550</p> <p>FY 2000 Planned Program:</p> <p>MOTS 50 Conduct Market Analysis</p> <ul style="list-style-type: none"> • 1747 Procure prototype MOTS Test Article for Developmental Testing <p>TTCS 106 Analyze ARC220 Integrations Requirement</p> <p>MEANPALS</p> <ul style="list-style-type: none"> • 15 Conduct Market Analysis • 1383 Procure NDI Prototypes • 275 Conduct Demonstration and Analysis • 310 Modify System and Evaluate Results as Required • 900 Integrate with Other ATC Systems • 125 Small Business Innovative Research/Small Business Technology Transfer Programs <p>Total 4911</p>

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2 Exhibit)							DATE February 2000		
BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604641A Tactical Unmanned Ground Vehicle				PROJECT DE47	
COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
DE47 Tactical Unmanned Ground Vehicle (TUGV)	2528	4905	0	0	0	0	0	0	0
<p>A. Mission Description and Budget Item Justification: The Army is the lead for this joint service program. The development of a Tactical Unmanned Ground Vehicle (TUGV) is within the Family of Tactical Unmanned Vehicles (FTUV) within the OSD Joint Robotics Program. TUGV provides commanders the ability to see the battlespace while at the same time reducing soldiers' exposure during dangerous reconnaissance, surveillance, target acquisition (RSTA) and Nuclear Biological and Chemical (NBC) detection missions. Performs as a force multiplier, eliminates trickle-down combat information, reduces the "fog-of-war" and fills the brigade intelligence gap. Most importantly, the TUGV will remove brigade and battalion commanders from the bottom of the combat intelligence food chain. Unmanned systems, operating out front, provide a force multiplication capability where TUGVs report the nature of the terrain, find the enemy, locate obstacles, acquire targets, detect chemical vapors, and provide this information directly to those who need it the most –the battalion commander's battle staff. There will be at least two versions of the TUGV. A medium version, Tactical Unmanned Vehicle-Medium (TUV-M), will be developed for emerging requirements from the United States Marine Corps and U.S. Army Infantry Center for Scout/surveillance and engineer reconnaissance. Tactical Unmanned Vehicle-Light (TUV-L) will be a man-packable unit for intelligence collection and dissemination, and conducting remote/area/building reconnaissance. The platforms will include a minimum day/night audio/video, and accept a family of modular multi-sensor capabilities such as through-wall and countersniper sensors. Data will be produced in a format compatible with higher level communications architecture. This PE supports the critical transition of Defense Advanced Research Project Agency (DARPA) and Army Research Laboratory (ARL) developed technologies to the Project Manager (PM) Unmanned Ground Vehicles/Systems so that they can be assessed (maturity, supportability, operationally) during user appraisals, advanced concept technology demonstrations (ACTD) and, packaged and readied for incorporation into the TUV Engineering and Manufacturing Development (EMD) performance specifications.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 1107 Concept Exploration/Design – TUV – Light/Medium participated in Military Operations in Urban Terrain (MOUT) ACTD, and Advanced Warfighting Experiments/Limited Objective Experiments (AWE/LOE). • 619 Modeling and simulation . • 200 Assessed Demo III technology for insertion into the FTUV specification. • 602 Datalink Testing and fiber optic design and build. <p>Total 2528</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 4273 Integration of Haaglunds flail technology and SRS kit onto selected platform. Single test prototype for ACTD. • 500 Mine testing in various soil types. • 132 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR) <p>Total 4905</p>

The effort involves incorporation of the Standardized Robotic System, flail integration, and evaluation in an ACTD setting.</p> <p>C. Other Program Funding Summary: Not applicable.</p> <p>D. Acquisition Strategy: The Joint Project Office is following a disciplined Evolutionary Acquisition strategy. This strategy requires Horizontal Technology Integration (HTI) of emerging sensors, lasers, and command and control data link technologies so that the first generation TUGV will enable soldiers to perform dangerous scout/RSTA, biological and chemical detection, and targeting missions from remote and safer locations. This program differs from traditional acquisition programs by incorporating an in-house Program Definition and Risk Reduction phase. TUV-M prototype systems are being built during this phase using state-of-the-art sensors, controlling actuators, low bandwidth communications, mission planning, and off-road navigation technologies. The program utilizes a TUGV Integrating Integrated Product Team (IIPT) approach. TUV-M Engineering and Manufacturing Development will begin with a projected Milestone II decision in FY 2000 using OSD PE 0604709D8Z (FTUV) funding. Viking acquisition will be accomplished through a two phased study, design, fabricate, and test program. Viking will be a candidate for the Joint Area Clearance ACTD in FY02.</p> <table border="1" style="width:100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left;">E. DE46 HMMWV Recapitalization Program	0	2938	2449	0	0	0	0	5387	5387

A. Mission Description and Budget Item Justification: This Program Element supports all Light Tactical Wheeled Vehicles such as the High Mobility Multi-Purpose Wheeled Vehicle (HMMWV), HMMWV Recapitalization Program and the Armored Security Vehicle (ASV). In FY 2000 through FY 2002, Project DE40 funds the RDT&E effort leading to the HMMWV A4 Block Improvement Program through technology integration into the HMMWV. Project DE46 funds the RDT&E effort for the HMMWV Recapitalization Program, which will provide operational and safety improvements to the current fleet of vehicles by component refurbishment, replacement and enhanced performance characteristics.

B. Program Change Summary	<u>FY 1999</u>	<u>FY 2000</u>	<u>FY 2001</u>

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)	DATE February 2000
--	------------------------------

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604642A Light Tactical Wheeled Vehicle	PROJECT DE40
--	--	-------------------------------

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
DE40 High Mobility Multi-Purpose Wheeled Vehicle (HMMWV) Prototype	0	4503	7444	979	0	0	0	12926	12926

A. Mission Description and Budget Item Justification: The HMMWV is a lightweight, high performance, four-wheel drive, air transportable and air droppable, high mobility tactical wheeled vehicle. The HMMWV consists of a basic design with several variants including Cargo/Utility, Armament Carrier, Ambulance, Shelter Carrier and Armored Armament Carrier. FY 2000 through FY 2002 funds the HMMWV A4 block improvement development effort. This effort will meet the key HMMWV ORD requirements focusing on the primary goal of restoring the mobility and reliability of the original HMMWV models at the higher payload and mission requirements of the Army Force XXI. Key performance parameters (KPP) will be addressed by the development of technologies for central tire inflation, steering gear, suspension and corrosion prevention enhancements. The effort will address changes to the Federal Motor Vehicle Safety Standards (FMVSS), including anti-lock brakes and changes to environmental requirements for the engine. The HMMWV development effort will incorporate, where appropriate, commercial light truck technology now being evaluated in National Automotive Center (NAC) programs. New commercial technology, combined with greater achievement of user requirements, will result in a block-improved HMMWV. Developmental testing in FY 2001 will be required. Testing will include reliability, availability, maintainability (RAM), environmental, and transportability.

FY 1999 Accomplishments: Project not funded in FY 1999

FY 2000 Planned Program:

- 3582 HMMWV Development Contract
 - 300 Support Costs (Engineering/Quality/Matrix)
 - 500 Assemble and test up to five prototype vehicles
 - 121 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)
- Total 4503

FY 2001 Planned Program:

- 5044 HMMWV Development Contract
 - 2100 Assemble and test up to eight prototype vehicles
 - 300 Support Costs (Engineering/Quality/Matrix Support)
- Total 7444

--	------------------------------

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604642A Light Tactical Wheeled Vehicle	PROJECT DE46
--	--	-------------------------------

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
DE46 HMMWV Recapitalization Program	0	2938	2449	0	0	0	0	5387	5387

A. Mission Description and Budget Item Justification: The HMMWV Recapitalization Program is a remanufacture program to extend the life of the over age HMMWVs. The HMMWV fleet is experiencing increased Operation and Support (O&S) costs, excessive wear, or corrosion. These HMMWVs, which are in need of replacement/remanufacture, include the Cargo/Utility, Armament, Ambulance and Shelter Carrier. The HMMWV Recapitalization Program will provide operational and safety improvements to the current fleet of vehicles and will correct imbalances in required vs on hand quantities. The recapitalized HMMWVs will include enhanced performance characteristics. These improvements will be achieved by a combination of component remanufacture and replacement. Components, which have been improved during the evolution of the HMMWV and the Commercially Based Tactical Truck (COMBATT) demonstration of commercial technology, will be incorporated in the recapitalized vehicles where technically and economically feasible. The objective of the HMMWV Recapitalization Program is to extend the useful service life of the vehicles. In FY 2005, 60% of the HMMWV fleet will be over-aged. Technology insertion opportunities will be developed, targeted on reducing overall O&S costs and improving performance. Examples are corrosion protection, digitization requirements, data bus integration and other O&S cost drivers.

FY 1999 Accomplishments: Project not funded in FY 1999

FY 2000 Planned Program:

- 2509 Prototype contract(s)
 - 350 Support Costs (engineering/quality/matrix support)
 - 79 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)
- Total 2938

FY 2001 Planned Program:

- 1794 Prototype contract(s)
 - 525 Test up to eighteen prototype vehicles
 - 130 Support Costs (engineering/quality/matrix support)

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604642A Light Tactical Wheeled Vehicle	PROJECT DE46
---	---	------------------------

C. Acquisition Strategy: The HMMWV Recapitalization program acquisition strategy consists of three parts: (1) leveraging the value of the current fleet by assessing its condition, developing rates and schedules, and completing risk assessments; (2) gaining input from industry by using a Government-prepared Statement of Objectives (SOO) to solicit contractor-prepared Scopes of Work (SOW) and proposals for award of Prototype and Test (PAT) contracts; and (3) awarding a single contract for production of recapitalized vehicles. It is the Government's plan to competitively award up to three PAT contracts based upon best value source selection procedures. This phase will use Cost as An Independent Variable (CAIV) principles to establish cost thresholds. During PAT, each contractor will be provided nine candidates HMMWV's as Government Furnished Equipment (GFE) to build six recapitalized prototype vehicles, which will undergo testing. The three contractors will be permitted to compete for award of the follow-on-production contract. The PAT test results will be considered during the best value source selection for the production contract. The production contract will be a five-year requirements type contract.

D426 Advanced Colt System	0	0	0	0	0	15378	24755	Continuing	Continuing

A. Mission Description and Budget Item Justification: This program element supports the Engineering and Manufacturing Development efforts for the Multi-Option Fuze for Artillery (MOFA). MOFA will provide proximity, time, delay, and point detonation functions for 105mm and 155mm bursting projectiles. Funds the development of the replacement system for the Striker fire support vehicle, leveraging developments in the mobile armored system and future combat vehicle. System will be compatible with the maneuver scouts for Brigade reconnaissance teams in heavy, medium and light divisions. Performs fire support planning, direction, controlling, target designation, night observation and while retaining equivalent mobility of supported units .

D175 Multi-Option Fuze Advanced Field Artillery System	4259	2877	2200	0	0	0	0	0	48034	
<p>A. <u>Mission Description and Justification</u> This project finances the Engineering and Manufacturing Development phase of the Multi Option Fuze Artillery (MOFA). MOFA will provide proximity, delay, time and point detonation functions for 105mm and 155mm bursting projectiles. MOFA will be inductively set. This induction set feature is critical to the automated ammunition handling capability of the Crusader 155mm self-propelled howitzer, allowing Crusader to meet rate of fire (10 rounds/min) requirements. The Portable Inductive Artillery Fuze Setter (PIAFS) is being developed to allow non-Crusader equipped artillery units to inductively set the MOFA. A Low Cost Advanced Target Sensor (LCATS) is being developed for enhanced electronic countermeasures effects.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 1424 Performed Design Enhancements and Qualification Builds, XM782 (Contract Task VI), this included the cost for 500 XM782 fuzes for testing. • 280 Began Low Cost Advanced Target Sensor (LCATS) developmental efforts. • 1550 Portable Inductive Artillery Fuze Setter (PIAFS) advanced development and testing. • 305 Program management and management engineering services. • 700 Conducted XM782 MOFA Pre-Production Qualification Testing (PPQT). <p>Total 4259</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 894 Low Cost Advanced Target Sensor (LCATS) development and technology insertion. • 320 Program management & management engineering. • 1336 Portable Inductive Artillery Fuze Setter (PIAFS) development effort. • 250 Conduct PIAFS testing. • 77 Small business Innovative Research/Small Business Technology Transfer (SBIR/STTR) Programs. <p>Total 2877</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 1361 Low Cost Advanced Target Sensor (LCATS) development and technology insertion • 239 Program management and management engineering • 600 Complete LCATS testing

C. Acquisition Strategy: Intent is to award a competitive best value (restricted to North America) contract for FY1999, FY2000 and FY2001 buys. We will have a follow-on, competitive multi-year contract beginning with the FY2002 buy. We anticipate that the Low Cost Advanced Target Sensor (LCATS) will be incorporated into the XM782 design during follow-on, competitive buy in FY2002. A sole source award will be made on the Portable Inductive Artillery Fuze Setter (PIAFS) using a FFP contract in FY2000.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604649A Engineer Mobility Equipment Development
--	---

COST <i>(In Thousands)</i>	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
Total Program Element (PE) Cost	69044	57880	0	0	0	0	0	0	293731
DG25 M1 Breacher	57710	57719	0	0	0	0	0	0	194104
DG26 Heavy Assault Bridge	11334	161	0	0	0	0	0	0	99627

A. Mission Description and Budget Item Justification: This Program Element (PE) supports the development of new, advanced combat engineer systems that will have mobility characteristics comparable to the maneuver forces supported. The programs included in this PE are the Grizzly (M1 Breacher) and the Wolverine (Heavy Assault Bridge). The Grizzly base vehicle is an M1 Abrams Tank chassis whereas the Wolverine base vehicle is the M1A2 SEP Abrams Tank chassis. The Grizzly will integrate a versatile/survivable full-width mine clearing blade with automatic depth control, a power driven arm, and an armored commander's control station on the chassis. The Wolverine integrates a Military Load Class (MLC) 70 bridge that spans a 24 meter gap (26 meter bridge) with computer controlled launching mechanism.

Project G25, M1 Breacher, was terminated to support the New Army Transformation.

B. Program Change Summary	<u>FY 1999</u>	<u>FY 2000</u>	<u>FY 2001</u>
Previous President's Budget (FY 2000/2001 PB)	70590	58321	37741
Appropriated Value	71069	58321	
Adjustments to Appropriated Value			
a. Congressional General Reductions	-479		
b. SBIR / STTR	-1809		
c. Omnibus or Other Above Threshold Reductions		-239	
d. Below Threshold Reprogramming	+545		
e. Rescissions	-282	-202	
Adjustments to Budget Years Since FY 2000/2001 PB			+21910
New Army Transformation Adjustments		TBD	-59651
Current Budget Submit (FY 2001 PB)	69044	57880	0

Change Summary Explanation: Funding – FY 2001: Increase (+21910) to project DG25 was in support of the M1 Breacher program; later reduction of 59651 was in support of the New Army Transformation, resulting in the termination of this program.

UNCLASSIFIED

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)							DATE February 2000			
BUDGET ACTIVITY 5 - Engineering and Manufacturing Development			PE NUMBER AND TITLE 0604649A Engineer Mobility Equipment Development				PROJECT DG25			
COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost	
DG25 M1 Breacher	57710	57719	0	0	0	0	0	0	194104	
<p>A. <u>Mission Description and Justification:</u> The Grizzly (M1 Breacher) provides the Combat Engineer with significantly improved mission effectiveness and crew/vehicle survivability while clearing minefields and removing complex natural and man-made obstacles at the forward edge of the battlefield. The Grizzly is capable of moving with, and would be as survivable as, the maneuver force. The system provides a critical resource for executing in stride breaches, supporting the Force XXI maneuver commander's goals of information and maneuver dominance on the battlefield. The current method of breaching obstacles is to coordinate the employment of line charges, bridges, plows, rollers and even soldiers on the ground in a very dangerous and complex mission. The Grizzly replaces all of this with a single, survivable breach platform that gives the Combat Engineer a capability that does not currently exist in today's complex obstacle breaching operations, and will facilitate successful execution of ground combat mission requirements by maneuver forces.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 36844 Continued Refinement of Design to Support Vehicle Production Configuration and Complete Fabrication of 2 Prototypes • 662 Procured Chassis Government Furnished Material (GFM) for Prototype Vehicles • 17352 Performed Component Testing and Simulation, Production Planning, and Accomplish Program Logistics Requirements • 2852 Provided Program Management <p>Total 57710</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 28100 Complete Vehicle Integration, Shakedown & Delivery to Government of 2 Prototypes in Mar 00 • 21568 Perform Test Fix Implementation, Production Planning, Contractor Test Support and Accomplish Program Logistics Requirements • 6497 Contract Termination • 1554 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR) <p>Total 57719</p> <p>FY 2001 Planned Program: Project not funded in FY 2001.</p>

<p>C. <u>Acquisition Strategy:</u> Research and development efforts have leveraged the accomplishments of the Combat Mobility Vehicle Advanced Technology Transition Demonstrator (CMV-ATTD) contract. Design modifications were written into the Advanced Development contract for the powertrain and other chassis components/systems necessary to insure that the Grizzly meets the mission profile required by the Operational Requirements Document. Modeling and Simulation was an essential aspect of the program and was being used to avoid costs in all areas of the design, training, testing, and production of this system. Through the production buy the vehicle was to be sole sourced to United Defense Limited Partnership (UDLP), Ground Systems Division, York, PA. The contracts for training devices development and production was to be awarded by STRICOM with maximum use of existing commercial off-the-shelf hardware and software.</p>

DG26 Heavy Assault Bridge	11334	161	0	0	0	0	0	0	99627

A. Mission Description and Justification: The Wolverine provides Military Load Class (MLC) 70 capability spanning 24-meter gaps (26-meter bridge). The Wolverine mobility characteristics are comparable to the supported maneuver forces. The Wolverine is an M1A2 SEP Abrams Tank chassis supporting a horizontally launched bridge. The bridge launches in five minutes or less; and can be retrieved in ten minutes or less (inclusive of five minute engagement and five minute placement times).

FY 1999 Accomplishments:

- 3605 Contractor Test Support, Developmental Contract and Refurbishment of Test Vehicles
 - 593 Program Management
 - 7136 Live Fire Test Execution, Production Verification Test Execution, and System Support Package Build and Placement
- Total 11334

C. Acquisition Strategy: Side-by-side Comparison Testing was completed in FY 1993 on three different prototype bridges and launchers for Phase I of Engineering and Manufacturing Development (EMD). As a result of the testing and submission of proposals, one contractor, General Dynamics Land Systems Division (GDLS), was selected to complete Phase II of EMD with a Cost-Plus-Award-Fee contract. A contract was awarded in FY 1996 for two Wolverine systems, with an option for four additional systems exercised in December 1996 that will complete combined developmental and operational testing. A Fixed Price three year multiyear contract was awarded in April 98 for LRIP and initial fielding requirements.

The termination strategy is to be determined.

DL75 Profiler	0	5190	4800	2345	0	0	0	0	12335
DL76 Lightweight Laser Designator Rangefinder Upgrades	0	0	0	863	942	1188	1237	0	4230

A. Mission Description and Budget Item Justification: This program element provides night vision technologies required for U.S. defense forces to engage enemy forces twenty-four hours a day under conditions with degraded visibility due to darkness, adverse weather and battlefield obscurants. These developments and improvements to high performance night vision electro-optics, radar, laser, and thermal systems and integration of related multi-sensor suites will enable near to long range target acquisition identification and engagement to include significant fratricide reduction, which will improve battlefield command and control in “around the clock” combat operations. Project DL69 is focuses on inserting key Horizontal Technology Integration Second Generation and beyond FLIR (HTI SGF) thermal sensor technology into common battle groups. Project DL70 focuses on night vision electro-optical, laser, and other target identification and location equipment for use by individual soldiers and a variety of platforms. In addition to the Lightweight Laser Designator Rangefinder (a Warfighter Rapid Acquisition Program) this project includes both mounted and dismounted HTI laser evaluation and assessment, and integrates individual sensors into a common architecture. It also funds development and qualification of critical upgrades (e.g. dual wavelength target acquisition capabilities) for Thermal Weapons Sight and Drivers Vision Enhancer production programs, and funds activities associated with image and sensor fusion capabilities (e.g. I2 and thermal). Project DL74 focuses on a long-range multi-sensor system utilizing HTI SGF thermal sensor and other technologies, for use by US Army scouts at extended ranges beyond the Abrams and Bradley capabilities. The LRAS3 will provide the scouts with their first reconnaissance and surveillance system with a twenty-four hour, all weather capability that is mounted or man-portable. Project DL75 focuses on development of the Profiler upgrade of the capabilities of the current AN/TMQ-41 Meteorological Measuring Set. Profiler will employ remote and local sensing of the atmosphere, mesoscale modeling and enhanced computing capabilities to provide target area and more accurate meteorological data. These enhancements and new capabilities will increase the lethality of field artillery systems such as Crusader, Multiple Launched Rocket Systems (MLRS) and towed and self-propelled cannons. Project DL76 focuses on LLDR Upgrades that will increase the operational capability and survivability of Combat Observation Lasing (COLT) and Fire Support (FIST) teams, thereby yielding greater lethality for precision and area munitions through precise target location and designation. Upgrades developed under this Project will be inserted either through ongoing production

<i>COST (In Thousands)</i>	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost	
DL70 Night Vision Devices Engineering Development	9915	21229	14335	16309	16604	18167	17642	Continuing	Continuing	

A. Mission Description and Justification: This project develops and improves high performance night vision electro-optics, thermal and laser systems, and systems integration of related multi-sensor suites to enable near to long range target acquisition and engagement as well as improve battlefield command and control in “around-the-clock” combat operations. The Lightweight Laser Designator Rangefinder (LLDR) and entered a thirty month Engineering and Manufacturing Development Phase in FY 1997. LLDR is a day/night manportable modular target location and laser designator system. The target location system combines a thermal imager, a day camera, eyesafe laser rangefinder, compass, global positioning system (GPS) and digital data and image export capability. The laser designator provides pinpoint targeting for all laser-guided munitions. LLDR gives the artillery light forces the capability to observe, locate and designate targets for direct and indirect fire missions. Improvements to the Thermal Weapon Sight (TWS) and the Driver’s Vision Enhancer (DVE) are also developed under this project. TWS improvements are focused on the integration of target location and digital data transfer capabilities. DVE improvements focus on achieving a dual wavelength capability, leading to image fusion. Sensor fusion activities are planned for both vehicle mounted systems, such as DVE, and soldier carried systems, such as TWS. Both TWS and DVE will benefit from MANTECH improvements to focal plane array and optics. The DVE dual wavelength capabilities will be developed, evaluated and inserted incrementally into ongoing production efforts. The architecture for interoperability of sensors [Mini Eye-Safe Laser Infrared Observation Set (MELIOS), LLDR, Lightweight Video Reconnaissance System (LVRS), TWS, DVE, Long Range Advanced Scout Surveillance System (LRAS3), Synthetic Aperture Radar (SAR), Infrared Line Scanner (IRLS), Forward Looking Infrared (FLIR), visible imagers, hyperspectral cameras and Moving Target Indicator (MTI) radars] on the digital battlefield will be developed through an integrated sensor suite program. This will facilitate the merging of existing sensor data for digital distribution within the Joint Technical Architecture-Army. Sensor data distribution activities include the development and promulgation of a common device architecture, and a computer-based system which will verify and validate the flow of data from the sensor, through a variety of computing devices and then out over the communications network. Efforts include Image Intensified photo cathode development in support of an eye-safe laser system, and evaluation of the suitability and technology supporting a common, HTI, laser system that could be used in a variety of ground and air platforms. Manufacturing technology activities in optics and focal plane arrays are also being supported. Targeting aid development will upgrade the AN/TMQ-41 Meteorological Measuring Set by integrating radar and microwave satellite technology to provide “on demand” trajectory and target area weather conditions. This will increase the ability of artillery/rocket forces to project accurately lethal munitions further into the battlespace. The Enhanced NVG program will develop enhancements and improvements to be incorporated into the Night Vision Goggle system.

FY 1999 Accomplishments:

- 5708 Continued development of ten LLDR EMD models for test/evaluation.
- 1062 Conducted integration and technical tests of the sensor architecture on various platforms [USMC Target Location Designation and Hand-Off System (TLDHS), Bradley FIST, Striker, FBCB2] including Ft. Bragg demonstration.

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)		DATE February 2000
BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604710A Night Vision Systems - Engineering Development	PROJECT DL70
FY 1999 Accomplishments: (continued)		
<ul style="list-style-type: none"> • 426 Continued development and integration of prototype HTI tactical laser onto Army platforms, such as FSCS, Apache, Kiowa Warrior, LLDR and LRAS3; focus was on laser performance specifications and interface-to-platform requirements supporting modular laser design. • 1969 Conducted preliminary hardware evaluation and demonstration of Thermal Upgrade activities (TWS Target Location, DVE Dual Wavelength and MANTECH improvements covering both systems). • 750 Conducted evaluation of upgrade alternatives for the AN/TMQ-41 (MMS) to include program/technical requirements definition. 		
Total	9915	
FY 2000 Planned Program:		
<ul style="list-style-type: none"> • 2486 Complete LLDR EMD activities, to include technical and operational testing, reports and equipment refurbishment for transition of the program into production. • 5568 Fabricate prototypes and evaluate Thermal Upgrade activities (TWS Target Location and displays (eight test units), DVE Dual Wavelength (six test units) and MANTECH improvements covering both systems). • 2148 Continue integration and technical tests of the sensor architecture for FBCB2 and a variety of platforms such as TLDS, Striker, including efforts leading to participation in the Joint Contingency Forces (JCF) Army Warfighting Experiment (AWE). • 2472 Conduct modeling and simulation efforts in support of modular laser design for systems such as: FSCS, Apache, Kiowa Warrior, TUAV, LLDR and LRAS3; initiate dismounted multifunction application for the HTI tactical laser (i.e. reduced cost, size, weight and power consumption), to include initial prototype development for systems such as the M-4/M-16, MK-19 and TWS. • 3000 Conduct analysis and preliminary detail design effort for LLDR Long Range Striker Vehicle application • 1000 Design and fabricate internal digital interface (MELIOS Digital RSTA, 4 test units) to support battlefield data dissemination • 1000 Conduct analyses and preliminary design effort for Enhanced NVG to make lighter, smaller and increase individual movement techniques. • 3000 Combustion Eyesafe Laser was funded in this Program Element (PE) in error; Reprogramming to PE 0602709A, Project DH95, Night Vision & EO Tech has been requested. • 555 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) Programs 		
Total	21229	
FY 2001 Planned Program:		
<ul style="list-style-type: none"> • 2639 Continue Thermal Upgrade activities (prototype test and evaluation) to enhance combat effectiveness of TWS and DVE. • 3595 Continue integration and technical tests of the sensor architecture, including implementing results from the JCF AWE. • 3388 Continue dismounted HTI laser activity to reduce cost, size, and weight and power consumption. • 4713 Initiate Image Fusion of Image Intensification and Thermal technologies to enhance the effectiveness of combat and combat service support platforms such as: the individual soldier and vehicles using the DVE (Bradley, Smoke Generators, etc).

DL75 Profiler	0	5190	4800	2345	0	0	0	0	12335	
<p>A. <u>Mission Description and Budget Item Justification:</u> Profiler is an upgrade of the capabilities of the current AN/TMQ-41 Meteorological Measuring Set (MMS). Profiler will employ remote and local sensing of the atmosphere, Mesoscale modeling and enhanced computing capabilities to provide target area and more timely meteorological data. By providing more accurate MET messages, Profiler will enable supported cannon and rocket systems to decrease miss distances, which will increase predicted fire effectiveness. These enhancements and new capabilities will increase the lethality of field artillery systems such as Multiple Launch Rocket Systems (MLRS) and towed and self-propelled cannons. A further enhancement that would remove the balloon radiosonde from the system should reduce the objective crew size from six to four personnel. This Engineering and Manufacturing Development (EMD) effort will increase the accuracy of a wide range of deep fire weapons and munitions, and ultimately reduce total cost of ownership to the Army.</p> <p>FY 1999 Accomplishments: Project not funded in FY 1999.</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 4816 Initiate MMS Profiler (MMS-P) EMD development effort, including hardware for four prototype units for both technical tests and operational evaluation and conduct design reviews. • 162 Studies and simulations to support mesoscale model requirements and enhancements. • 72 Planning and preparation for development and operational testing • 140 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) Programs <p>Total 5190</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 4498 Continue MMS-P EMD development effort. • 99 Ballistics and meteorology simulations to support accuracy requirements. • 203 Conduct developmental testing and prepare for operational testing. <p>Total 4800</p>

A. Mission Description and Budget Item Justification: Project supports Engineering and Manufacturing Development (EMD) and Non-Developmental Item (NDI) evaluation of unit/organizational equipment, weapons/munitions, clothing and individual equipment, fabric shelters, field service equipment, food and food service equipment to enhance soldier efficiency, effectiveness, lethality, sustainability and survivability. New food items and food service equipment will be developed to reduce food service logistics requirements for all four Services. The organizational equipment program supports development of a new generation of field device support items: small, large and collective protective shelters; decontamination items; and improved space heaters to shelter and sustain the soldiers in the field and improve quality of life. The Land Warrior program will produce the first fully integrated fighting system for dismounted combat soldiers. The Soldier Enhancement Program provides soldier items that can be procured in three years or less.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604713A Combat Feeding, Clothing, and Equipment	PROJECT DL40
--	---	-------------------------------

FY 2000 Planned Program: (continued)

- 265 Complete operational testing on the Lightweight Personal Armor Systems Ground Troop (PASGT) Helmet and submit specification change for authorization
 - 263 In-house engineering support services, computer services, and conduct technical and program reviews
 - 82 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)
- Total 3505

FY 2001 Planned Program:

- 740 Complete testing and obtain Milestone II for the Modular Glove Program Phase I (Cold/Wet Weather) and initiate Phase II (Barbed Wire/Flame Retardant) with market survey and procurement of test items
 - 50 Type classify and transition to production the Concealable Body Armor
 - 200 Award engineering manufacturing development contract, procure prototypes, and initiate testing for Improved Toxicological Agent Protective (ITAP) Boots, Glove, and Apron
 - 575 Continue to update fabrics, style changes, and consolidate dress clothing for Joint Services
 - 732 Investigate ballistic protection materials for Body Armor and apply upgrades (increased protection/lighter weight)
 - 1440 Integrate advanced materials for ballistic protection and electronics (audio/microphone) into a Modular Integrated Helmet
 - 529 In-house engineering support services, computer services, and conduct technical and program reviews
- Total 4266

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)							DATE February 2000					
BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604713A Combat Feeding, Clothing, and Equipment				PROJECT D548				
COST (In Thousands)				FY 1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
D548 Military Subsistence System				1194	1620	1747	1856	1863	1979	1976	Continuing	Continuing
<p>Mission Description and Budget Item Justification: Project provides Engineering and Manufacturing Development (EMD) and Non-developmental Item (NDI) evaluation of food and food service equipment to enhance soldier efficiency and survivability. New food items and food service equipment will be developed to reduce food service logistics requirements for all four services. Development of Joint Service Food/Food Service Equipment to improve individual combat effectiveness and reduce logistics burden and operation and support costs of subsistence support for service men and women. Develop multi-fuel, rapidly deployable field food service equipment to support combat, humanitarian missions and operations-other-than-war. Improve equipment to enhance safety in food service, utilize battlefield fuels and decrease fuel and water requirements.</p> <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> • 360 Designed and fabricated prototypes of improved tray ration heater, griddle, and stock pot assembly for improved heat transfer and removal of combustion by-products. Conducted Technical Testing and field evaluation of the Tray Ration Heater. • 368 Completed fabrication and conducted Development and Technical Testing of Marine Corps Rapid Deployment Kitchen. • 62 Completed Technical Testing of Non-Electric Field Refrigerator and developed performance specification. • 404 Completed user evaluations of steam generator/power washer for field food sanitation centers and initiated integration of gray water treatment/handling system for on-site wastewater disposal. <p>Total 1194</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 320 Complete fabrication of remaining field feeding components to improve efficiency and integrate into complete kitchen for formal testing. • 201 Conduct Developmental and Operational Testing of the Advanced Food Sanitation Center • 214 Develop kit components to allow use of Modern Burner Unit in extreme cold weather, and reduce noise levels. • 291 Prepare design concept for food service equipment. Conduct testing of prototype Air Force Expeditionary Field Feeding System. • 203 Complete User Testing of Marine Corps Rapid Deployment Kitchen. • 126 Design improved Tray Ration Heater System with enhanced operational capabilities and reduced cost. • 116 Conduct requirements analysis and develop concept for improved efficiency Advanced Design Refrigerator. • 116 Improve sanitation of Mess Kit to ensure safety of personnel. • 33 Small Business Innovation Research/Small Business Technology Transfer (SBIR/STTR) Program <p>Total 1620</p>

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604713A Combat Feeding, Clothing, and Equipment	PROJECT D548
--	---	-------------------------------

- FY 2001 Planned Program:**
- 275 Conduct Developmental and Operational Testing for field kitchen equipment efficiency upgrades.
 - 297 Complete documentation, type classify, and award production contract for Advanced Food Sanitation Center.
 - 300 Complete fabrication and initiate testing of Air Force Expeditionary Field Feeding System.
 - 189 Conduct noise level and cold weather evaluations of kitchen burner kit and transition to procurement.
 - 150 Evaluate improved Tray Ration Heater System, demonstrate enhanced operational capability.
 - 125 Perform in-house and user evaluations of improved sanitation methods for mess kits.
 - 311 Complete design and fabrication of Advanced Design Refrigerator with enhanced transportability and improved thermal efficiency.
 - 100 Develop and design improvements for the Navy COMMZ Kitchen, incorporating reliability, maintainability and efficiency innovations.
- Total 1747

COST (In Thousands)		FY 1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
D667	Land Warrior	43385	36411	60132	36547	35718	29736	9895	Continuing	Continuing
<p>A. Mission Description and Budget Item Justification: The LW Program establishes the Infantry soldier as the Army's singularly unique weapons platform. It is a first generation integrated fighting system for soldiers and is the first system to provide combat overmatch for the five types of Infantry (air assault, airborne, light, mechanized, and Ranger) in the close, personal, and brutal fight. As a result of the Program not achieving its objectives under the original LW approach, PM-Soldier has developed a restructured acquisition concept. Although all LW subsystems will remain the same in concept, the restructured LW Program will take maximum advantage of components available from Commercial-Off-the-Shelf (COTS), as well as Government-Off-the Shelf (GOTS) components and technologies. With this change in approach, the Program will minimize the use of LW-unique hardware and software and develop a more open systems architecture. This architectural approach will provide greater flexibility to incorporate technology upgrades as they become available, reduce intellectual and proprietary rights issues, and reduce developmental and ownership costs. LW provides the foundation system upon which future Mounted, Air, and other warrior integrated systems will be based, as well as support to the Marine Corps and other services.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 30747 Conducted preliminary systems integration. Transitioned Modular Lightweight Load Equipment (MOLLE) and Interceptor Body Armor into Protective Clothing and Individual Equipment (PCIE) subsystem design. Developed and successfully tested new 16.3 volt/10-cell/2.8 lbs "LW Day Pack" primary battery powered a XM1 LW system for 13 hours. The 10-cell battery fits into the MOLLE 100-round Utility Pouch without modification. Began fabrication and integration of LW peripheral components. Conducted risk mitigation efforts utilizing Commercial Off The Shelf/Government Off The Shelf (COTS/GOTS) candidates. Fabricated 3 demonstration prototypes utilizing alternative COTS/GOTS candidates. • 3229 Conducted Force XXI Battle Command, Brigade and Below (FBCB2) interoperability contractor demonstration. Demonstrated voice and data communications via frequency hopping. Demonstrated ability to transmit FBCB2 Free Text, spot reports, position reports, and Call-For-Fire messages through a LW Platoon RTO to a Bradley Company XO outfitted with FBCB2-Applique software. • 5139 Conducted technology feasibility assessment to identify possible improvements with COTS/GOTS alternatives. Evaluated and implemented selected alternatives to reduce system weight to meet operational requirements. Increased program office to respond to Army Category (ACAT) I/II programmatic requirements. • 4270 Program management and systems engineering support from other government agencies for overall program efforts. Conducted technical and program reviews and briefings. Transitioned configuration management effort from contractor to government. Established PM Soldier - Monmouth the government integration facility located at Fort Monmouth, NJ. <p>Total 43385</p>

<p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 25870 Award Developmental contract to complete system hardware and software integration and produce 15 LW for safety testing and airborne certification. Participate in a platoon(-) exercise to demonstrate operational suitability and soldier acceptance. Conduct LW IPR. • 1748 Conduct safety testing. Conduct airborne certification, contractor component testing, user fightability evaluations, and obtain safety release. • 7824 Program management and systems engineering support from other Government agencies for overall program efforts. Conduct technical and program reviews, Army System Acquisition Review Council (ASARC) reporting/briefings, and increase program office resources to respond to Army Category (ACAT) I/II programmatic requirements. Continue operation of PM Soldier - Monmouth. Conduct LW demonstrations to higher headquarters and other countries to demonstrate system capability and functionality. Support to NATO Land Group 3 and other partnered countries to ensure compatibility with potential multinational military operations. • 969 Small Business Innovative Research (SBIR)/Small Business Technology Transfer program (STTR). <p>Total 36411</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 36427 Fabricate 55 LW prototypes for platoon LUT. Conduct Confidence Testing, Functional Qualification Testing (FQT), and Production Qualification Testing (PQT). • 9650 Complete Single Channel Ground/Airborne Radio System (SINGARS) compatible Leader Radio (repackaged Advanced SINGARS Improvement Program (ASIP)/Network Access Unit (NAU) or "mini-radio" with software router. Complete LW integration of Embedded Battle Command (EBC) software into Windows NT to ensure interoperability with FBCB2/Tactical Internet. Obtain software certification at the Central Technical Support Facility (CTSF) at Fort Hood (digitization). Obtain National Security Agency (NSA) Communications Security (COMSEC) level one certification for leader radio. Incorporate Multiple Integrated Laser Engagement System (MILES 2000) and Combat Identification Dismounted Soldier (CIDDS), and incorporate Integrated Navigation functionality into LW to meet threshold requirements. • 4644 Conduct airborne certification, user fightability assessments, and obtain safety release. Update training package and manuals for platoon (-) LUT and transition to electronic format. Develop interactive training scenarios, and evaluate integrated training environment. Conduct training for platoon LUT. • 9411 Program management and systems engineering support from other Government agencies for overall program efforts. Conduct technical and program reviews. Continue operation of PM Soldier - Monmouth. Conduct LW demonstrations to higher headquarters and other countries to demonstrate system capability and functionality. Support to NATO Land Group 3 and other partnered countries to ensure compatibility with potential multinational military operations. <p>Total 60132</p>

C. Acquisition Strategy: As a result of technical challenges, the LW program was completely restructured last year. The restructured LW Program takes maximum advantage of components available from other Government agencies as well as Commercial-Off-the-Shelf (COTS) components and technologies. With this change in approach, the program will minimize the use of LW-unique hardware and software and develop a more open systems architecture. This architectural approach will provide greater flexibility to incorporate technology upgrades as they become available, reduce intellectual and proprietary rights issues, and reduce cost. System integration will be performed by the Government with products (i.e., subsystems, components) being provided by multiple contractors. These products would conform to standards identified in Interface Control Documents, which will be controlled by the Government. The strategy is to negotiate sole source for the Low Rate Initial Production (LRIP) with options or initial full rate production sufficient to equip the first division. Equipment for each subsequent division is planned to be recompeted. The LW total procurement objective is 34,000 systems. The LW Program supports the Chief of Staff of the Army's (CSA) vision of establishing lethal forces through the use of commercial technologies to lighten the force; increase soldier lethality, and making the force more survivable, more mobile, and more deployable.

<p>A. <u>Mission Description and Budget Item Justification:</u> The Soldier Enhancement Program (SEP) increases the lethality, command and control, sustainability, mobility, and survivability of the soldier through accelerated acquisition of lighter, more lethal weapons and improved "soldier items" including lighter, more comfortable load-bearing equipment, field gear, survivability items, communications equipment, and navigation aids. For SEP purposes, soldiers are managed in three categories: dismounted soldiers, combat crews (air and ground), and other soldiers. Projects generally are completed in three years or less.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 1295 Completed evaluation/type classify/transition to production: Machine Gun Optics, Non Lethal 40MM (XM1006), XM84 Stun Grenade, Short Squad Automatic Weapon, Flashlight Mount, M249 Mounts, Infrared Illumination Hand Grenade, Midsize Riot Control Dispenser, and Advanced Protective Eyewear System • 4944 Continued evaluation/procured prototypes and/or tested: Long Range Sniper Rifle, 12 Gauge Breaching Round, Fire Control for the M203, Long Range Tactical Sniper Cartridge, Lightweight Fragmentation Hand Grenade, 40MM Cannister Round, 12 Gauge Non Lethal Point and Crowd Control, Rifle Launched Non Lethal Munitions, Backup Iron Sight for Modular Weapon System, Canteen Water Insert Purifier, Collapsible Grappling Hook, Small Unit Multi-Purpose Trailer (SUMT), Improved Combat Shelter, Helicopter Emergency Egress Device, Fighting Position Revetment, and Lightweight Voice Amplifier • 1123 Initiated market surveys and/or evaluations: Sniper Accessory Kit, Joint Service Combat Shotgun, M240B Ammunition Pack, Multiple Utility Digging System (MUDS), Concealable Stab Protective Body Armor (CSPBA), Camouflage Uniform System for Soldiers (CUSFS), Advanced Camouflage Face Paint, Protective Gloves, Micro Rappel System, Tactical Search Mirror System, Petroleum Oil Lubricants (POL) Handlers Glove System, and Riot Control Agent Neutralizer • 2496 In-house engineering support services, computer services, conducted technical and program reviews • 2208 Army Materiel Command Reprogram - place marker for Defense Finance and Accounting Services <p>Total 12066</p>

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)		DATE February 2000
BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604713A Combat Feeding, Clothing, and Equipment	PROJECT D668
FY 2000 Planned Program:		
•	4628	Complete evaluation/type classify/transition to production: Rifle Launched Non Lethal Munitions, 40MM Cannister Round, 12 Gauge Breaching Round, 12 Gauge Non Lethal Point and Crowd Control, Long Range Tactical Sniper Cartridge, Long Range Sniper Rifle, Canteen Water Insert Purifier, Collapsible Grappling Hook, Micro Rappel System, Improved Combat Shelter, Helicopter Emergency Egrees Device, and Lightweight Voice Amplifier
•	4086	Continue evaluation/procure prototypes, and/or test: Lightweight Fragmentation Hand Grenade, M203 Enhanced Fire Control, Sniper Accessory Kit, Backup Iron Sight for Modular Weapon System, Petroleum Oil Lubricants (POL) Handlers Glove System, Camouflage Uniform System for Soldiers, Multiple Utility Digging System, Tactical Search Mirror System, Concealable Stab Protective Body Armor, Protective Glove System, Riot Control Agent Neutralizer, Advanced Camouflage Face Paint, and Small Unit Multi-Purpose Trailer,
•	3061	Initiate market surveys and/or evaluations: Joint Service Combat Shotgun, M240B Combat Ammunition Pack (CAP), 12 Gauge Chlorobenzalmalononitrile (CS) Dust Cartridge, Smart Mine Probe, Family of Batons/Night Sticks, Parachutist's Drop Bag, Tactical Assault Ladder Systems, Improved Cold Weather Mask, and Boot Gaiters
•	2205	In-house engineering support services, computer services, conduct technical and program reviews
•	380	Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)
Total	14360	
FY 2001 Planned Program:		
•	4847	Complete evaluation/type classify/transition to production: Lightweight Fragmentation Hand Grenade, M203 Enhanced Fire Control, Sniper Accessory Kit, Backup Iron Sight for Modular Weapon System, Riot Control Agent Neutralizer, POL Handlers Glove System, Boot Gaiters, Camouflage Uniform System for Soldiers, Advanced Camouflage Face Paint, 12 Gauge CS Dust Cartridge, Multiple Utility Digging System, Tactical Assault Ladder System, Tactical Search Mirror System, Family of Batons/Night Sticks, Concealable Stab Protective Body Armor, Protective Glove System, Small Unit Multi-Purpose Trailer, and Smart Mine Probe
•	2083	Continue evaluation/procure prototypes and/or test: Joint Service Shotgun, M240B Combat Ammunition Pack, Parachutist Drop Bag, and Thermal Cutting Device
•	4875	Initiate market surveys and/or evaluations on new items to commence n FY2001
•	2500	In-house engineering support services, computer services, conduct technical and program reviews

C. Acquisition Strategy: The Soldier Enhancement Program (SEP) consists of Non-Developmental Items (NDI) or Commercial Off-The-Shelf (COTS) that can transition to production in three years or less. Items that are technologically challenging requiring more than three years development are pursued under the appropriate system area. New SEP items are reviewed and approved for evaluation annually. Procurement varies by appropriation.

<p>A. <u>Mission Description and Justification:</u> Mounted Warrior (MW) is an integrated modular system that will enhance the combat vehicle crewman's fighting capabilities. The MW system will be used by a wide variety of combat crewmen and will be tailored based on Mission, Enemy, Terrain/weather, Troops available and Time (METT-T). The physical burden imposed by cumbersome personal equipment degrades a crewman's effectiveness by increasing rates of fatigue, reducing mobility and restricting their ability to perform mission functions. Consideration will be given to optimizing the balance between vehicle mounted and crewman mounted equipment and designing an overall system that will improve crewman's endurance, safety, mission performance and crewman/vehicle interface. The MW system will provide hands free, tetherless communications, increased laser eye protection, maximum individual protection from Nuclear, Biological, Chemical (NBC) contamination, spill, flame and heat, and will provide for better performance of crew tasks without reducing tactility and agility.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 179 Provided engineering support to the USA Armor Center in development of the Mounted Warrior cordless communication and heads up display Operational Requirements Documents (ORD). D573 STRICOM and Naval Air Warfare Center Training Systems Division (NAWCTSD) Support	10638	9594	2690	977	1001	1030	1047	Continuing	Continuing

A. Mission Description and Justification: Program Element funds engineering development of Non-System Training Devices to support force-on-force training at the Combat Training Centers (CTC), general military training and training on more than one item/system, as compared with system devices which are developed in support of a specific item/weapon system. Training devices and training simulations help to modernize the forces while providing force multipliers that improve combat effectiveness by providing realistic training. Training devices maximize the transfer of knowledge, skills, and experience from the training situation to a combat situation. Force-on-force training at the National Training Center (NTC), Ft. Irwin, CA; Joint Readiness Training Center (JRTC), Ft. Polk, LA, and Combat Maneuver Training Center (CMTC), Hohenfels, Germany; and battle staff training in Battle Command Training Program (BCTP) will provide increased combat readiness through realistic collective training in low, mid, and high intensity scenarios. Project D241, Non-System Training Devices-Combined Arms, develops simulation training devices for Army-wide use, including the CTCs. Project D396, WARSIM Intel Module, is the intelligence driver for Warfighter Simulation 2000 (WARSIM)/Joint Simulations (JSIMS) land component. FY99/00 Project D573, STRICOM Non-System Training Devices Support, funds in-house costs of project support by US Army Simulation, Training and Instrumentation Command (STRICOM) and support from Naval Air Warfare Center Training Systems Division (NAWCTSD). FY01 Project D573 funds STRICOM infrastructure for command operations only.

Adjustments to Appropriated Value			
a. Congressional General Reductions	-257		
b. SBIR / STTR	-171		
c. Omnibus or Other Above Threshold Reductions		-262	
d. Below Threshold Reprogramming	+3968		
e. Rescissions	-60	-243	
Adjustments to Budget Years Since <u>FY 2000/2001</u> PB			+21370
Current Budget Submit (<u>FY 2001</u> PB)	67515	72529	73295

Change Summary Explanation: Funding – FY 2001: Increase (+21370) for WARSIM to support required functionality at Initial Operating Capability (IOC).

Note: In the FY00 program, the \$2M increase for WARSIM was inadvertently placed against project D396; funds will be reprogrammed and executed in project D241.

UNCLASSIFIED

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)							DATE February 2000				
BUDGET ACTIVITY 5 - Engineering and Manufacturing Development			PE NUMBER AND TITLE 0604715A Non-System Training Devices - Engineering Development					PROJECT D241			
COST (In Thousands)			FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D241 Non-System Training Devices Combined Arms			52103	50617	50706	40703	64598	34869	39291	Continuing	Continuing
<p>A. <u>Mission Description and Justification:</u> This project is used to develop prototype training devices to support Combined Arms (Infantry, Armor, Aviation, Air Defense, Artillery, Engineer, Chemical, and Support troops) training and multi-system training within the Army, to include the Reserve Components. Corps Battle Simulation (CBS) is the Army's standard command and staff training simulation at the corps/division level. WARSIM will be the next generation battle command simulation system to replace CBS, Tactical Simulation (TACSIM) and Combat Service Support Training Simulation System (CSSTSS). WARSIM will utilize current technology to efficiently provide training support and linkage to other simulations and simulators. WARSIM will comply with Simulation Interoperability Standards Organization (SISO) standards and open architecture to meet the Army's training requirements into the next century, to include High Level Architecture (HLA) compliance. WARSIM is also the land component element of the Joint Simulation System (JSIMS), which is a joint initiative managed by the JSIMS Joint Program Office. The Combat Synthetic Training Assessment Range (CSTAR) trains commanders on combat tactics using a virtual reality battlefield training device with simulated reconnaissance and intelligence capabilities. The Aerial Weapons Scoring System (AWSS) provides for one prototype system to enhance system performance up to the ORD requirements and enable the AWSS to interface with other training systems. AWSS is an integrated group of computer controlled sensors that detect and score rocket and cannon/machine gun engagements during live-fire training and qualification tables. The Engagement Skills Trainer (EST) provides individual and squad level home station training with a deployable small arms engagement trainer, resulting in significant savings in ammunition costs. This project funds the development of training devices, simulators, simulations and instrumentation for the Combat Training Centers (CTCs); Joint Readiness Training Center Military Operations in Urban Terrain (JRTC MOUT) for instrumented training in a realistic MOUT environment; National Training Center Objective Instrumentation System (NTC OIS) to provide a completely digital based system for full tactical system connectivity and High Level Architecture (HLA) compatibility. The Army Battle Command System Integration (ABCSI) provides an interface for the current instrumentation systems to support digitized rotations at the maneuver Combat Training Centers (NTC, CMTC, and JRTC). The National Training Center Range Data Management System (NTC RDMS) Frequency Conversion will develop the architecture to resolve the frequency usage conflict at NTC. The Intelligence Electronic Warfare Tactical Proficiency Trainer (IEWTPT) provides realistic Battle Command training by creating a realistic intelligence information environment that is exploited and reported by Military Intelligence (MI) soldier operation to battle commanders and staff. The Joint Contingency Force Advanced Warfighting Experiment (JCF-AWE) provides for fiber optic connectivity, digital data storage system, C4I after action review capability, and Distributed Interactive Simulation (DIS) requirements at the Joint Readiness Center (JRTC). The FY01 New Generation Army Targetry Systems (NGATS) program provides development and planning to address emerging weapon system targetry requirements</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 34364 Completed Spiral Build 1 and continued development of Spiral Build 2 software development for WARSIM 2000. • 5451 Completed development of Engagement Skills Trainer. • 1400 Continued limited enhancements to CBS and completed validation of Y2K compliance.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604715A Non-System Training Devices - Engineering Development	PROJECT D241
--	---	-------------------------------

- 10442 Continue development of devices, simulators and simulations to support training at the Combat Training Centers (CTCs), to include complete development of the CTIA domain model for NTC OIS, develop the Advanced Interactive Target System common instrumentation architecture for JRTC MOUT II and complete engineering development of Army Tactical Command and Control Systems (ATCCS) modules required for ABCS integration at NTC, CMTC and JRTC.
- FY 2001 Planned Program: (continued)**
- 27873 Continue Spiral Build 3 software development of WARSIM.
 - 3800 Continue the development tasks needed to upgrade the AWSS to full Operational Requirements Document (ORD) compliance.
 - 4548 Initiate NGATS program development and planning to address emerging weapon system targetry requirements to include: Digital Multi-Purpose Range Complex (DMPRC) acquisition contract effort; develop and test prototype Lookback/Shootback Targetry that senses opposing force and initiates appropriate response.
- Total 50706

D573 STRICOM and Naval Air Warfare Center Training Systems Division (NAWCTSD) Support	10638	9594	2690	977	1001	1030	1047	Continuing	Continuing

A. Mission Description and Justification: In support of Non-System Training Devices (NSTD), this project funds the US Army Simulation, Training and Instrumentation Command (STRICOM) personnel salaries and support costs in FY99/00. FY01 D573 project funds STRICOM infrastructure for command operations only.

FY 1999 Accomplishments:

- 9388 Funded STRICOM personnel and support costs for Non-System Training Device programs.
 - 1250 Funded NAWCTSD support costs for Non-System Training Device programs.
- Total 10638

FY 2000 Planned Program:

- 8157 Funds STRICOM Infrastructure for command operations and support costs for Non-System Training Device programs.
 - 1426 Funds NAWCTSD support costs for Non-System Training Device programs.
 - 11 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)
- Total 9594

FY 2001 Planned Program:

- 2690 Funds STRICOM Infrastructure for command operations.
- Total 2690

B. Other Program Funding Summary: Not Applicable.

C. Acquisition Strategy: Not Applicable.

D. Schedule Profile: Acquisition Milestones not applicable on this project

Total Program Element (PE) Cost	6320	5308	6082	7138	5603	4721	5000	Continuing	Continuing
D579 Field Army Map System - Engineering Development	3208	5308	5595	6327	4796	4721	5000	Continuing	Continuing
D598 High Volume Map Production (HVMP) Equipment	0	0	487	811	807	0	0	0	2105
D653 Digital Topography Support System - WRAP	3112	0	0	0	0	0	0	0	3112

A. Mission Description and Budget Item Justification: The Project Director for Combat Terrain Information Systems (PD CTIS) is responsible for developing, procuring, and fielding of topographic support systems for the Army. Program Management responsibility and Milestone Decision Authority have been assigned to the Program Executive Officer for Command, Control and Communications Systems (PEO C3S). CTIS systems provide automated terrain analysis, terrain data management and graphics reproduction in support of Intelligence Preparation of the Battlefield (IPB), Command and Control, Terrain Visualization, weapons and sensor systems, and other topographic information customers. CTIS consists of two versions of the Digital Topographic Support System (DTSS) [i.e., HMMWV (DTSS-Light (L)) and 5-ton (DTSS-Heavy (H))], DTSS-Deployable (DTSS-D), DTSS-Base (DTSS-B) and the High Volume Map Production (HVMP) equipment. A Pre-Planned Product Improvement (P3I) program will be conducted to address technology insertion, cyclic upgrade of Commercial Off-the-Shelf equipment and modernization initiatives for the Topographic Support System (TSS). The DTSS-L was a successful FY98/99 Warfighter Rapid Acquisition Program (WRAP)/Force XXI Initiative. Experimentation results from the Div XXI Army Warfighter Experiment (AWE) identified technological enhancements necessary to support the First Digital Division (FDD). WRAP funding supports the development of these enhancements. PD CTIS has management responsibility for planning system integration and execution of assigned products from development through hand-off to the Readiness Command. The DTSS-H, DTSS-L, DTSS-D, and DTSS-B fall under the Field Army Mapping System - Engineering Development (D579) project. The HVMP falls under the D598 project. DTSS-L WRAP falls under the D653 project.

<i>COST (In Thousands)</i>	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost	
D579 Field Army Map System - Engineering Development	3208	5308	5595	6327	4796	4721	5000	Continuing	Continuing	
<p>A. <u>Mission Description and Budget Item Justification:</u> This Project funds development of the DTSS-L (HMMWV), DTSS-H (5-ton), DTSS-D (COTS) and DTSS-B (COTS). The current terrain analysis, topographic and reproduction support provided by Army Engineer Terrain Teams is a slow, labor intensive process that does not meet the needs of the Force XXI battlefield on which the commander must have the ability to rapidly obtain terrain information and topographic products. The DTSS will provide digital maps and updates to commanders and weapons platforms in support of mission planning (e.g., Imagery exploitation, Cover and Concealment, other IPB), rehearsal (e.g., 3D fly through, simulations) and execution (e.g., Common Tactical Picture, route planning). The DTSS automates terrain analysis and visualization, data base development/update/management/distribution, and graphics reproduction. The Combat Terrain Information Systems (CTIS) Modernization Plan emphasizes the development of a combined, integrated, tactically deployable, fully autonomous terrain analysis and graphics reproduction capability. These capabilities are being provided in 5-ton (DTSS-H) and HMMWV (DTSS-L) configurations. Fielding of the DTSS-H was completed in Dec 99. The DTSS-H systems will eventually be replaced by DTSS-Ls as part of a HQDA approved cyclic upgrade program. The DTSS-L is highly mobile and capable of supporting a full range of military operations, as well as peacetime stability and support operations. Both the DTSS-L and DTSS-H have been Type Classified-Standard. The DTSS-D provides a Commercial Off the Shelf (COTS) configuration that is capable of operating all of the terrain analysis software. The DTSS-D consists of transportable workstations and peripherals that can be set up to augment the tactical configurations. The DTSS-D does not include tactically deployable shelters and vehicles or tactical communications. The DTSS-D has been Type Classified-Standard. The DTSS-B was procured in response to a USAEUR initiative to develop the capability to generate terrain information over sparsely mapped areas to support training, mission rehearsal and contingency operations. The DTSS-B is designed to augment NIMA capabilities at the EAC level by providing quick response, special purpose mapping, terrain analysis and data base generation. The DTSS-B includes a Top Secret – SCI component that is capable of handling national technical means information in a secure environment. The DTSS-B has been Type Classified-Standard. CTIS systems will be deployed from Brigade through EAC. Products developed as part of the CTIS RDT&E program (e.g., improved Army Battle Command Systems (ABCS) interoperability, migration to Joint Technical Architecture – Army (JTA-A) and Defense Information Infrastructure Common Operating Environment (DII COE), improved data base management and distribution, automated feature extraction, improved tactical decision aid functionality, rapid terrain visualization, improved graphics reproduction) will be incorporated into all of the DTSS hardware and software architectures. Additionally, the TSS is outdated and must be modernized to keep pace with Army digitization. The modernization initiatives associated with the TSS include updating the Operations, Distribution and Photomechanical Sections with computer workstations, copiers and printers. The Survey section will be downsized to a HMMWV configuration and the Drafting section will be updated to include digital cartographic equipment.</p>

C. <u>Acquisition Strategy:</u> The Acquisition Strategy for the DTSS - Light EMD phase was to utilize Army standard equipment and the Common Hardware/Software (CHS) computer workstations in conjunction with non-development item (NDI) components to develop an integrated baseline hardware configuration. The previous Combat Terrain Information Systems (CTIS) System Engineering and Integration (SE&I) contractor (Lockheed Martin Corp) executed the EMD phase, performing system integration, and provided units for formal test and evaluation. Milestone III for the DTSS-L was successfully completed in Jan 98. Production of the DTSS-L commenced in February 1999. Previously existing DTSS units have been upgraded to a 5-ton ISO 20-foot shelter configuration (DTSS-H). Funding to support cyclic upgrades to the DTSS-H (DTSS-H will be replaced by DTSS-L in FY02/03 timeframe) and DTSS-L has been programmed on a 5-yr. upgrade cycle. Acquisition of the DTSS-D and DTSS-B was completed in FY 1995 and FY 1996, respectively. Based upon CINC, TRADOC and PEO C3S User Evaluation approvals, the DTSS-D was Type Classified - Standard and added to the gaining unit's Table of Organization and Equipment. Funding to support a 5-yr. cyclic upgrade program for the DTSS-D and DTSS-B will commence in FY 2000 and FY 2001, respectively. The DTSS-B has also been Type Classified-Standard. The acquisition of the DTSS-D and DTSS-B relied upon existing contracts and commercial-off-the-shelf to the fullest extent possible.

The Project Office will continue with this strategy for the cyclic upgrade program. The pre-planned product improvement program (P3I) will be executed with the current SE&I contractor (Litton/TASC, Inc.). The contracting strategy for the DTSS-Light program was to execute the EMD phase through the previous SE&I contractor, Lockheed Martin Corporation. A Competitive Cost Plus Fixed Fee (CPFF) contract was awarded for both the previous and existing CTIS SE&I contracts. A competitively awarded, Firm Fixed Price (FFP) contract was awarded to Sechan Electronics, Inc. for the Full Rate Production of the DTSS-Light. Production of the DTSS-H was accomplished through Firm Fixed Price (FFP) production contracts with Lockheed Martin Corporation (5) and SFA Inc. (4). The computer workstations for CTIS programs are being procured through the project manager for CHS.

<p>A. <u>Mission Description and Budget Item Justification:</u> This Project funds the development of the High Volume Map Production (HVMP) equipment. The current high volume graphics reproduction support provided by the Reproduction Subsection of the Topographic Support System is a time consuming labor intensive process. The HVMP will provide a tactical capability to rapidly reproduce large volumes of graphics (maps, charts, situation overlays, imagery, etc.) material. The HVMP will be capable of reproducing information from hardcopy as well as softcopy via a direct digital interface. It is envisioned that the HVMP will be housed in tactical vehicles (e.g., HMMWV or 5-ton). A total of 16 HVMPs will be produced to support the printing squad of the engineer topographic company located at Corps and Echelons Above Corps.</p> <p>FY 1999 Accomplishments: Project not funded in FY 1999</p> <p>FY 2000 Planned Program: Project not funded in FY 2000</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 487 Initiate Engineering and Manufacturing Development of the HVMP <p>Total 487</p>

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D653 Digital Topography Support System - WRAP	3112	0	0	0	0	0	0	0	3112

A. Mission Description and Budget Item Justification: This project funds the Digital Topography Support System (DTSS) Warfighting Rapid Acquisition Program (WRAP) Force XXI Initiative. Several technological enhancements to the DTSS were identified during the Div XXI AWE that were determined to be necessary to support the First Digital Division. The DTSS is the only system that will provide digital topographic support to maneuver brigades. It provides the digital topographic support that is the underpinning for the entire digitization effort and will provide the topographic data required by all ABCS systems. DTSS products support mission planning and execution functions. WRAP will fund RDT&E efforts to address an improved digital interface with other ABCS systems, digital data communications using the Global Broadcast System (GBS), data subsetting/tailoring for ABCS, and data storage/interface with the ABCS digital geospatial data server (Map Server). WRAP funding provides for the acceleration of RDT&E efforts for required improvements by 2 years, significantly reducing the delay between availability of commercial technologies and integration/evaluation for fielding to the FDD.

FY 1999 Accomplishments:

- 3112 Development of technological enhancements (improved ABCS interoperability, GBS interface, data tailoring, Map Server)

Total 3112

FY 2000 Planned Program: Project not funded in FY 2000

FY 2001 Planned Program: Project not funded in FY 2001

B. Other Program Funding Summary: Not Applicable

C. Acquisition Strategy: The Acquisition Strategy for execution of the WRAP/Force XXI initiative is to accomplish the development effort through the current CTIS SE&I contractor (Litton/TASC, Inc.). A Cost Plus Fixed Fee contract was awarded to the CTIS SE&I contractor.

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2 Exhibit)							DATE February 2000		
BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604726A Integrated Meteorological System (IMETS) (TIARA)				PROJECT DD85	
COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
DD85 Integrated Meteorological System (IMETS)	1901	2301	1771	1903	3412	3368	3365	Continuing	Continuing
<p>A. Mission Description: It is essential to provide the battlefield commander at all echelons with accurate, high resolution, near real time weather data in order to conduct intelligence preparation of the battlefield (IPB). This program element, Integrated Meteorological System (IMETS), funds the development of evolving upgrades to the fielded system. The IMETS is a mobile tactical automated weather data receiving, processing, and dissemination system designed to provide timely weather and environmental effects, forecasts, observations, and decision aid support to the Army. The IMETS is an Army-furnished system, which is operated by Air Force weather personnel and maintained within Army support channels. IMETS provides weather information overlays for the Common Tactical Picture, meteorological (met) messages and other tailored products. IMETS provides all Army Battle Command System (ABCS) systems, mission planning and situation awareness with direct client access to the IMETS 4-D (position and time) meteorological database and to the database of weather impacts on friendly and threat systems. IMETS consists of three basic configurations. These configurations enable support for the full range of military operations from large Major Regional Conflicts to small task forces supporting Military Operations Other Than War: 1) command post (CP) configuration for a fixed facilities at echelon above corps (EAC) level where the CP needs the IMETS permanently integrated into the local area network and a tactical IMETS is not required; 2) vehicle-mounted configuration for tactical operations where the supported echelon moves frequently; and c) light configuration for task-organized elements of a supported echelon, integrated into a small task force, where lightweight, easily deployed core weather functions can be performed without its own vehicle to shelter the system.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 864 Continued to investigate, develop, test and apply advanced software and hardware processing, storage, display and input/output (I/O) technologies to tech base prototypes of high performance expanded weather applications capabilities. This included extending the time domain in battlescale forecast modeling and initial integration of AF and Navy forecast data; evaluated the DoD Meteorological Satellite Program Special Sensor Data, environmental record data, for integration into the Weather Effects database; generated a Down Wind Message from IMETS; adapted the AF Electro Optical Tactical Decision Aid (EOTDA) and Army Target Acquisition Model (TARGAC) to run with IMETS weather data; investigated applications to support Aviation Mission Planning; developed a heat/cold tactical decision aid; certified DII/COE level 5 compliance for UNIX operating system; and began preliminary investigation of laptop configurations for future dismounted IMETS weather effects workstations. Implemented IMETS weather effects workstation software application changes required to provide Y2K compliance. Developed initial capabilities for ingest of Air Force MMS data using GRIB and BUFR World Meteorological Data standard formats. Integrated IMETS ingest of met data by Air Force Tactical satellite (TVSAT) communications. Developed IWEDA weather impact overlays for the Common Tactical Picture. • 658 Continued to evaluate, configure and integrate tech base prototype capabilities into operational IMETS. • 200 Continued test and evaluation support for ABCS digitization products. • 179 Additional funding provided for Y2K compliance. <p>Total 1901</p>

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604726A Integrated Meteorological System (IMETS) (TIARA)	PROJECT DD85
<p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 312 Integrate IMETS applications to ABCS 6.0 foundation software, including weather overlays, weather overlay provider, Joint Mapping Tool Kit map services; and deliver to CTSF for implementation in First Digitized Division. Participate in demonstrations and AWE exercises such as the Division Capstone Exercise and JCF-AWE. Begin conversion of IMETS Weather Effects Workstation applications to a dismounted laptop version (UNIX and PC/NT). Provide weather and impact information on the ABCS Synchronization Matrix, and weather symbol information/warnings on the Common Tactical Picture (CTP). • 567 Extend the IMETS weather forecast and decision aid capability from 24 to 96 hr at 36 km resolution. Produce a fast analysis version of the Battlescale Forecast Model (BFM) to produce short range (3 hr) forecasts over small user-defined Areas of Interest. Improve the BFM forecast output time resolution to one hour. Begin development of a common Atmospheric Sounding Program (ASP) to consistently post-process both BFM and MM5 data into weather hazards and features. Extend the IMETS Gridded Meteorological Database (GMDB) to incorporate multiple numerical weather prediction model data (MM5, BFM and 1 deg NOGAPS), including their different data grid definitions and geographic coordinate projections. Develop an initial version of the GMDB that can be hosted on the DTSS terrain data server, and develop special subsets of meteorological data and products that will reside on the Joint Common Data Base (JCDB). • 250 Interface the first release of tri-service Target Acquisition Weather Software – Army (TAWS-A) to the GMDB and IMETS. Develop a cold stress TDA for the Integrated Weather Effects Decision Aid (IWEDA). Develop a JAVA client version of IWEDA and evaluate as a prototype for platform independent IMETS applications. Investigate constraints on acoustic propagation TDA application prototypes for IMETS. Improve the Vis5D visualization to support the new GMDB data sets. Develop meteograms and other new contour displays. Develop IMETS products and parameters to support Aviation Mission Planning and data visualization from the GMDB met data. Develop initial meteorological satellite remote sensing products for IMETS using the Air Force Small Tactical Terminal or other sources of multi-band met satellite imagery, and special sounder data; and configure to IMETS satellite data registration, calibration and display. • 210 Purchase six IMETS Light test articles at \$35K each • 150 Continue to develop IMETS interoperability with other BFA systems, including MCS, ASAS, AFATDS, CSSCS and AMDWS. • 550 Continue to evaluate, configure and integrate tech base prototype capabilities into operational IMETS. • 200 Continue test and evaluation support for ABCS digitization products. • 62 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR) <p>Total 2301</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 250 Integrate IMETS applications to ABCS 7.0 foundation software. Complete conversion of IMETS data ingest, weather forecast, weather impact applications, graphical user interface, 2-D and 3-D data visualizations to execute on a dismounted laptop configuration. Certify DII/COE level 5 compliance for the laptop configuration.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604726A Integrated Meteorological System (IMETS) (TIARA)	PROJECT DD85
--	--	-------------------------------

FY 2001 Planned Program: (continued)

- 539 Extend the IMETS nested BFM and MM5 forecasts to 120 hours. Extend the IMETS Gridded Meteorological Database (GMDB) to incorporate latest METOC standards for common environmental data across services. Complete development of a common Atmospheric Sounding Program (ASP) to consistently post-process both BFM and MM5 data into weather hazards and features. Continue to develop a GMDB that can be hosted on the DTSS terrain data server for distributing IMETS gridded meteorological data and weather impacts database information to ABCS clients at lower echelons where there is no full IMETS capability. Continue to develop special subsets of meteorological data and products that will reside on the Joint Common Data Base (JCDB), to include hosting the GMDB on the JCDB. Integrate physics-based TAWS-A and rule-based IWEDA decision aids into an Army Tactical Decision Aid (ATDA) on IMETS. Integrate an acoustic propagation decision aid into the ATDA. Integrate additional polar and geostationary meteorological satellite remote sensing data analysis into IMETS to provide surface state, precipitation, snow cover and other weather parameters of interest.
- 150 Develop IMETS interoperability with other BFA systems, including MCS, ASAS, AFATDS, CSSCS and AMDWS.
- 382 Continue to evaluate, configure and integrate tech base prototype capabilities into operational IMETS.
- 200 Continue test and evaluation support for ABCS.
- 250 Implement a capability for IMETS to participate with both live and synthetic weather scenarios in live, virtual and constructive simulation exercises leading to First Digitized Corps. Develop a capability to ingest climatological and synthetic weather scenarios into IMETS for play in exercises. Interface to Air Force Combat Climatology Center and NCAR historical weather databases. Integrate to M&S through a C4I to HLA interface to allow the IMETS data to be used to support simulations and existing M&S weather servers.

D. Acquisition Strategy: The IMETS development program integrates efforts from the Air Force, Army, and OSD's DII COE. It is consistent with the development of the C4I Joint Technical Architecture-Army. The IMETS Non Developmental Item acquisition strategy has proven successful in the fielding of twenty systems since program initiation in FY 1992. This development strategy will be continued to include software modules as they mature and become part of the COE library. A common map server update is of primary focus along with increased user interoperability. Current improvement efforts are to incorporate new numerical weather prediction forecasts and products communicated from centralized Air Force Hubs to the individual IMETS and its Battlescale Forecast Model in the field. Weather tactical decision aid upgrades and updated forecaster aids are developed to include products from Air Force initiatives such as the New Tactical Forecast System and Small Tactical Terminal for high resolution domestic and foreign weather satellite data. IMETS data and applications will be accessible to Battlefield Functional Area C4I systems as clients through weather database services with the Combat Terrain Information System (CTIS) Digital Topographic Support System (DTSS) environmental database and through the Joint Common Data Base. Application modules from the Army Research Laboratory will be integrated and fielded as an upgrade to the current software baseline. These include: improvements in generation and display of higher time resolution and higher spatially resolved weather forecast and effects information; inclusion of physics-based weather decision aids and models; development of more versatile weather databases that support a variety of service and allied weather forecast models and environmental databases; development of weather applications consistent with joint METOC data standards; development of weather remote-sensing products from meteorological satellites; and ingest of battlefield sensor data to augment initializing mesoscale forecasts.

---	------------------------------

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604739A JTT/CIBS-M (TIARA)	PROJECT D702
--	--	-------------------------------

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D702 Common Integrated Broadcast Service-Modules	4192	4519	6060	1975	1956	1945	1939	0	31545

A. Mission Description and Budget Item Justification: The Integrated Broadcast Service (IBS) is the worldwide, DoD standard network for transmitting tactical and strategic intelligence and targeting data within a common format which will migrate to a single family of Joint Tactical Terminals for improved operational jointness. The Common Integrated Broadcast Service - Modules (CIBS-M) is a totally integrated Joint Program (all services and Special Operations Command (SOCOM)) which was created to consolidate and replace existing IBS receiver functionality/capability, inherent with the duplicative existing systems, with a "common family" of IBS modules (both hardware and software). This is required to implement the IBS Plan and consolidate/eliminate duplication of effort previously spread across multiple PEs/SSNs DoD wide. The JTT program leverages to the maximum extent possible, early tech base efforts initiated by the National Reconnaissance Office (NRO). These efforts will continually increase the reliability of the JTT/CIB-M while reducing the size of the JTT family of terminals. For those efforts which show promise, the management control will transition to the JTT JPO. The CIBS-M family of modules will be the "sole" provider of modules ensuring continued IBS interoperability to a variety of tactical receivers across DoD and the services. This program funds the design, development, test and evaluation of initial CIBS hardware and software modules, as well as implementing performance expanding modifications to the family of Joint Tactical Terminal (JTT) equipment, to train, equip and support the warfighter resulting with improved Joint Readiness and Interoperability.

FY 1999 Accomplishments:

- 3440 CIBS-M Software Development, Continuous Phase Modulation (CPM), Joint Control Client (JCC)
 - 60 Multi Mission Advanced Tactical Terminal/Commanders Tactical Terminal (MATT/CTT) Migration Support
 - 520 CIBS-M Hardware Development (Stand Alone CIBS-M Cryptographic Module (SACM), (Cornfield)
 - 137 Defense Information Infrastructure Common Operating Equipment (DII COE) Migration Support
 - 35 Joint Interoperability Test Center Support (JITC)
- Total 4192

FY 2000 Planned Program:

- 1297 Develop Common Integrated Broadcast Service (CIBS-M) Software for Integrated Broadcast Service (IBS) Interoperability
 - 1100 Host Platform Integration for other Services MOT&E
 - 502 DoD Information Technology Security Certification and Accreditation Process (DITSCAP)
 - 1100 Test Support (User Demonstration & JITC Support)
 - 400 Modeling & Simulation in support of Operational Training (Distance Learning, Distributed Interactive Simulation)
 - 120 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) Programs
- Total 4519

BA1081 Integrated Broadcast Terminal Mod (Tiara)	6411	0	0	0	0	0	0	0	8266

This Joint program also supports direct procurement of JTTs under the following PEs: Air Force – 0305158F; Naval Aviation – 0204152N, 0204154N and 0204251N.

D. Acquisition Strategy: The CIBS-M family of modules will be the sole provider of IBS Modules to a variety of IBS receivers across all DOD component agencies. The JTT/CIBS-M acquisition strategy has taken advantage of early streamlining initiatives and has addressed reducing O&S costs under the umbrella of Total Ownership Cost Reduction (TOCR) efforts. The Joint Program will competitively develop hardware and software modules and procure the required modules for integration into host receiver systems. Additionally, this line provides for necessary modifications to IBS modules as the broadcast networks continue to evolve and modify their formats and protocols. The R&D program will fund the design and development of P3I (priority to those objective requirements in the JTT ORD that have not been satisfied). A competitive FFP contract was awarded in FY98 consisting of 9 option awards for JTT and CIBS-M which includes a 10 year warranty.

D169 Air & Missile Defense Planning & Control System - WRAP	4938	0	0	0	0	0	0	0	4938

A. Mission Description and Budget Item Justification: The Forward Area Air Defense Command, Control, and Intelligence (FAAD C2I) System (Project D126) provides critical, automated threat aircraft, cruise missile, and UAV Battle Management/Command, Control, Communication, and Intelligence (BM/C4I) information to support the planning and decision process at various levels of command. The mission is to collect, digitally process, and disseminate real time target cueing and tracking information, common tactical air picture, and C2I information to all Short Range Air Defense (SHORAD) weapons [Avenger, Bradley Linebacker, Manportable Air Defense System (MANPADS), joint and combined arms]. Unique FAAD C2I software will provide this mission capability by integrating FAAD C2 engagement operations software with the Joint Tactical Information and Data System (JTIDS), Single Channel Ground and Airborne Radio System (SINCGARS), Enhanced Position Location Reporting Systems (EPLRS), Global Positioning System (GPS), Airborne Warning and Control System (AWACS), Sentinel, and the Army Battle Command System (ABCS) architecture. Provides joint C2 interoperability and horizontal integration with PATRIOT, THAAD, MEADS, and SHORAD weapon systems. FAAD C2I is the first system to digitize for the First Digitized Division/First Digitized Corps (FDD/FDC).

The Air and Missile Defense Planning and Control System (AMDPCS) (Project D146) is the backbone of air defense which provides BM/C4I capability to Air Defense Artillery Brigades, the Army Air and Missile Defense Command (AAMDC) corps and EAC headquarters, and joint force command and control elements, such as the Battlefield Coordination Detachment (BCD). The AMDPCS provides ADA Bdes with a fire control system via the Air Defense System Integrator (ADSI) for monitoring and controlling engagement operations by subordinate battalions. The AMDPCS provides a common air and missile defense staff planning and battlespace situational awareness tool via the Air and Missile Defense Workstation (AMDWS) to achieve the common tactical and operational air picture. The AMDWS, like ADSI, will be fielded to air and missile defense units at all echelons of command, battery through theater. The AMDPCS provides the ABCS architecture and the Army AMD Task Forces (AMDTF) with BM/C4I capability and the Army component of interoperable Joint Theater Air and Missile Defense (JTAMD) BM/C4I. The AMDPCS enables Active, Passive and Attack Operations coordination with the joint forces. AMDPCS (Project D169) was initiated with WRAP funding in FY 99.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604741A Air and Missile Defense Command, Control, Intelligence - Engineering Development
---	---

B. Program Change Summary	<u>FY 1999</u>	<u>FY 2000</u>	<u>FY 2001</u>
Previous President's Budget (<u>FY 2000/2001</u> PB)	11458	7995	8942
Appropriated Value	11606	7995	
Adjustments to Appropriated Value			
a. Congressional General Reductions	-148		
b. SBIR / STTR	-279		
c. Omnibus or Other Above Threshold Reductions	+1900	-28	
d. Below Threshold Reprogramming			
e. Rescissions	-46	-24	
Adjustments to Budget Years Since <u>FY 2000/2001</u> PB			+7520
Current Budget Submit (FY 2001 PB)	13033	7943	16462

Change Summary Explanation: Funding - FY99 Program increased for Y2K conversion.

FY01 increase for the following efforts:

- 1) Continued AMDWS S/W development to enable AD BOS participation in FDD/FDC.
- 2) Army AD participation in Joint Operations by developing ADMSW & AMDPCS to be compatible with TBMCS.
- 3) Continued to fund Joint Interoperable HW/SW development in order to fight with Air Force and Navy.

C. Acquisition Strategy: The acquisition strategy relies heavily on non-development items (NDI) and evolutionary software development to rapidly meet the demands of air defense battle management/command, control, communications, computers, and intelligence (BM/C4I) requirements, and to keep pace with automated information technologies. The concept of evolutionary software development is being followed and will be accomplished in Blocks I, II, III and IV. Blocks I and II have been completed. FAAD C2 Block III is currently being developed for both the Army's Active and Reserve components.

<p>A. Mission Description and Budget Item Justification: This program element provides for the development of diagnostic/prognostic hardware and software to support the increasingly complex electronics of Army weapon systems. The program focuses on commercial state-of-the-art test technologies which are common to multiple weapons platforms to minimize the cost of troubleshooting and maintenance in the field. Expert systems and artificial intelligence applications are being developed under this program element as part of the Army Diagnostics Improvement Program (ADIP) to support the overall Army strategy of improving the self-diagnostic capability of weapon systems through use of embedded sensors and built-in diagnostics. The goal of embedding diagnostics is to minimize the need for external testers and to improve the troubleshooting abilities of soldiers in the field. Emphasis is also being placed on development of paperless maintenance manuals and procedures and on battlefield electro-optical displays which will reduce the Army's investment in test program sets and in maintenance publications and procedures. This program element further provides for the development of modular, reconfigurable automatic and semi-automatic systems to satisfy calibration and repair requirements of Army general purpose test, measurement, and diagnostic equipment (TMDE). The calibration mission covers all equipment commodities, including the most sophisticated TMDE, and requires capabilities to support state-of-the-art technologies. A rapidly deployable calibration set with emphasis on digital electronics and tailored to support Army field units is being developed to alleviate the serious deployability and survivability shortfalls in the current systems.</p>

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604746A Automatic Test Equipment Development	PROJECT DL59
--	--	-------------------------------

<i>COST (In Thousands)</i>	FY 1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
DL59 Diagnostic/Expert Systems Development	6582	13166	3542	3554	3661	3694	3682	Continuing	Continuing

A. Mission Description and Budget Item Justification: This project funds development of diagnostic and prognostic systems and general purpose test and diagnostic equipment. These systems and equipment are required to overcome existing deficiencies and voids in organic test and diagnostic capabilities and to ensure the operational readiness, accuracy, and effectiveness of the Army's weapons and combat support systems. The project provides for development of diagnostic/prognostic technologies and state-of-the-art general purpose automatic test equipment to support the Army's weapon systems; improvement of general purpose automatic test equipment to meet new testing and technological requirements; market surveys of commercially available test equipment, methods, and procedures to determine applicability to Army requirements; and development and validation of test and diagnostic software. Applications of state-of-the-art technologies in expert systems and artificial intelligence, paperless maintenance and troubleshooting manuals, electro-optical displays for battlefield use, and soldier-friendly equipment will be developed to meet identified requirements.

FY 1999 Accomplishments:

- 670 Tested and evaluated anticipatory maintenance system for ground vehicles.
 - 1529 Developed interface software needed by developers to utilize Integrated Family of Test Equipment (IFTE) test capabilities.
 - 1728 Evaluated commercial diagnostics for application to Army helicopter system maintenance requirements.
 - 2455 Initiated preplanned product improvement program to expand test and diagnostic capabilities of the IFTE Electro-Optics Test Facility (EOTF).
 - 200 Developed test program set for Army VXI test system.
- Total 6582

FY 2000 Planned Program:

- 1390 Expand ground vehicle-based anticipatory maintenance system to brigade level.
 - 1519 Develop initial helicopter-based anticipatory maintenance system.
 - 1424 Develop horizontal technology insertion interface for the Bradley Fighting Vehicle System.
 - 3915 Complete preplanned product improvement program, testing, and user assessment for EOTF.
 - 2213 Develop EOTF test programs.
 - 2360 Upgrade EOTF prototype hardware.
 - 345 Small Business Innovative Research/Small Business Technology Transfer programs.
- Total 13166

C. Acquisition Strategy: This project funds a number of separate but related efforts to develop and upgrade general purpose automatic test equipment and diagnostic software to support Army weapon systems. The projects are managed by the Product Manager, Automatic Test Support Systems and are focused on ensuring maximum use of commercial technologies and equipment to satisfy the Army's test and diagnostic requirements. When the necessary expertise and capability are available within the Department of Defense, services required for the individual developmental projects are ordered from the government source; otherwise, commercial contracts are used. Equipment required for developmental projects is obtained by contract from the commercial supplier. Developmental efforts on the Electro-Optics Test Facility (EOTF) preplanned product improvement program are being completed under a sole source contract awarded to the prime contractor for the system. The Army will participate with the other services in development of a DoD standard automatic test system. The Army requirement is stated in the Integrated Family of Test Equipment (IFTE) operational requirements document (ORD). This developmental effort will be competitive contractual action and will be managed by a joint service NxTest Technical Working Group.										
D. Schedule Profile:										
	<u>FY 1999</u>	<u>FY 2000</u>	<u>FY 2001</u>	<u>FY 2002</u>	<u>FY 2003</u>	<u>FY 2004</u>	<u>FY 2005</u>			
Complete EOTF User Assessment		4Q								
EOTF Type Classification-Standard			1Q							
IFTE ORD Approval		1Q								
Follow-On Automatic Test System Milestone I/II			1Q							
NOTE: This is a continuing program of developmental activities to provide a means for satisfying test and diagnostic support requirements of Army weapon systems. It consists of a number of similar and related efforts many of which do not entail distinct major milestones.

<p>A. <u>Mission Description and Budget Item Justification:</u> This project funds development of the Army's next generation calibration set (CALSET 2000). A redesigned, rapidly deployable calibration set is required to overcome existing deficiencies and voids in organic calibration and repair capabilities. Experiences/lessons learned from Desert Shield/Desert Storm and from operations in Somalia and Bosnia highlighted the need for a more mobile and upgraded calibration set. Primary needs are for an appropriate mobility footprint that will allow airlift via C-141 or C-130 aircraft, greatly reduced electromagnetic interference/radio frequency interference signature for operations on the modern digital battlefield, and enhanced battlefield mobility. The downsized calibration set being developed under this project will employ reconfigurable, open electronics architecture and computer-based calibration instrumentation wherever feasible and will be housed in transport configurations to allow airlift via C-141/C-130 aircraft. This project also funds identification and evaluation of commercial and nondevelopmental test, measurement, and diagnostic equipment (TMDE) with potential to meet weapon system maintenance requirements and to cost effectively migrate new, higher reliability, open architecture electronics test equipment into the Army's inventory. Studies, market research, inventory analyses, bid sample testing, prototyping, and other efforts required in the early phases of the acquisition cycle will be accomplished under this project to support TMDE and calibration standards acquisitions.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 1794 Initiated development of two prototypes combining the current AN/GSM-286 and AN/GSM-287 Calibration Sets into a downsized configuration. • 745 Acquired and evaluated several smaller, lighter, high-precision calibration standards for technology insertion into downsized equipment configuration. • 302 Initiated development of software to link calibration sets computers and demonstrated basic Integrated Calibration Environment (ICE) software. <p>Total 2841</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 1719 Continue development of CALSET 2000 downsized calibration set configuration. • 250 Perform field testing and user assessment of CALSET 2000. • 250 Continue development of software/database linkages, including ICE and external communications links. • 600 Design and develop software to automate transponder/interrogator sets using the Identification Friend or Foe Radar Test Set. • 78 Small Business Innovative Research/Small Business Technology Transfer programs. <p>Total 2897</p>

C. Acquisition Strategy: This project funds development and upgrade of general purpose test equipment and calibration standards and the associated support equipment and software. The projects are managed by the Product Manager, Test Equipment Modernization/Calibration Sets Equipment and provide state-of-the-art capabilities to satisfy test and diagnostic requirements of Army weapon systems. Projects are focused on use of commercial and nondevelopmental item technologies to reduce the Army's investments in test and calibration equipment and to reduce the logistics and operations and support cost burdens. When the necessary expertise and capability are available within the Department of Defense, services required for the individual developmental projects are ordered from the government source; otherwise, commercial contracts are used. Equipment required for developmental projects is obtained from the commercial supplier. Candidate commercial equipment and nondevelopmental items are identified and evaluated through market research and government testing and evaluation.

D. Schedule Profile: This is a continuing program of developmental activities to provide a means for satisfying test and diagnostic support requirements of Army weapons and support systems. It consists of a number of similar and related efforts, many of which do not entail distinct major milestones. Major milestones for the CALSET 2000 Calibration Set being developed under this project are as follows:

	<u>FY 1997</u>	<u>FY 1998</u>	<u>FY 1999</u>	<u>FY 2000</u>	<u>FY 2001</u>	<u>FY 2002</u>	<u>FY 2003</u>	<u>FY 2004</u>	<u>FY 2005</u>	<u>FY 2006</u>

A. Mission Description and Budget Item Justification: This project funds the developmental efforts under the Army Diagnostics Improvement Program (ADIP). The ADIP has three main thrusts: Embed diagnostics on all major Army platforms, develop an anticipatory maintenance system, and improve the diagnostics on current systems. Generic procedures, software applications, and hardware devices that can be embedded in weapon systems will be developed and tested under this project. Included in this effort will be a basic, generic Health and Usage Monitoring System for Army helicopters. A similar system will be developed for ground-based fighting systems, and an inexpensive system will be developed for use in the ground-based diesel engine truck fleet.

FY 1999 Accomplishments: Funded as part of Project DL59 in FY 1999.

FY 2000 Planned Program: Funded as part of Project DL59 in FY 2000.

FY 2001 Planned Program:

- 2175 Test and evaluate helicopter-based anticipatory maintenance system for Kiowa Warrior.
 - 2541 Develop generic embedded diagnostics structure for ground fighting vehicles.
 - 1711 Develop initial anticipatory logistics software interfaces.
- Total 6427

<p>A. Mission Description and Budget Item Justification: Distributed Interactive Simulation (DIS) is a synthetic environment within which humans may interact through a systematic connection of different subcomponent simulations, simulators and/or instrumented live task forces. These components may be located together or distributed at geographically dispersed locations, yet can interoperate using various simulation hardware linked through use of standard communication architecture. This program element supports the Army's Advanced Simulation Program to enable operational readiness and support the development of concepts and systems for Force XXI and the Army After Next through the application of new simulation technology and techniques. This engineering development and application of simulation technology will provide the tools to electronically link all subcomponents together in a manner that is transparent to the user. The synthetic environment is used to verify the scenarios, tactics/techniques and procedures, train testers on new hardware/software and conduct trial test runs before costly live field tests. The tools developed are available for reuse by developers and users of simulations throughout the Army. Project DC73, Synthetic Theater of War, STOW-A, provides innovative applications of legacy systems (live, virtual and constructive, C4I Surveillance and Reconnaissance) to meet the urgent requirements of the domains (e.g. training shortfalls) in preparation of next generation systems. STOW-A provides direct support to the Training, Exercises and Military Operations (TEMO) domain and the Advanced Concepts Requirements (ACR) domain. TEMO support derives from the demonstrated, low cost training capabilities that are provided by the toolkit. ACR support derives from the demonstrated capability of the kit to support battle lab and AWE exercises and experiments and the development of Tactics, Techniques and Procedures to support digital operations. Project DC74, Developmental Simulation Technology, provides simulator equipment upgrades, network upgrades, software upgrades, and resolves interoperability issues in support of the Army's Core DIS Facilities (CDFs) at Fort Knox, Fort Benning, Fort Rucker and the Operational Support Facility in Orlando, Florida. Project DC77, Interactive Simulation, focuses on engineering development of advanced simulation technology and tools to provide a reusable synthetic environment. The project also develops and enhances reconfigurable simulators which are used as Advanced Concepts Research Tools (ACRT) that will allow the battlelabs to accomplish their mission in support of the ACR, Research, Development and Acquisition (RDA), and TEMO domains. Project DC78 develops and upgrades computer generated forces software systems that support experimentation, concept evaluation, materiel development and training. The One Semi-Automated Forces (OneSAF) program will combine and</p>

DC78 Computer Generated Forces	1292	2565	15180	17723	20816	21343	18148	Continuing	Continuing	
<p>A. Mission Description and Justification: This project provides for the development of software systems to realistically represent activities of units and forces in simulation. This representation is used to support concept evaluation, experimentation, materiel acquisition and training communities. This project funds improvements, new functionality, enhancements and re-architecture of Modular Semi Automated Forces (ModSAF). Other initiatives include the systems engineering and design for improvements to the architecture and interoperability of Army SAFs, and the evolution to an Army universal computer generated forces system, OneSAF. OneSAF is a composable next generation SAF that will represent a full range of operations, systems and control processes for support of training research, development and acquisition simulation applications including human-in-the-loop.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 482 Continued the development of the OneSAF architecture to provide composability, HLA compliance and repeatability • 253 Continued OneSAF requirements definition. • 437 Completed development of One SAF Test Bed (OTB) Build 1.0, integrated functionality of ModSAF V5.0, and initiated development of OTB Builds 2.0 and 3.0/4.0. • 120 Verified and validated newly integrated software. <p>Total 1292</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 626 Complete development of OTB Builds 2.0 and 3.0/4.0 and initiate development of OTB Build 5.0 • 499 Complete development and issue OneSAF Version 1.0 (Alpha) for initial use, replacing ModSAF, and initiate development of Version 2.0. • 1373 Prepare Statement of Work (SOW) for system development contract. • 67 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR) <p>Total 2565</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 4907 Complete development of OTB Build 5.0 and continue development of Version 2.0. • 9488 Develop functionality to represent composable behaviors, opposing forces and provide terrain, editing and data collection tools and OneSAF infrastructure enhancements. • 785 Verification and validation of newly integrated software.

D957 Tactical Exploitation System (TES) (TIARA)	0	0	12916	29926	27619	5801	6000	Continuing	Continuing																																												
<p>A. Mission Description and Budget Item Justification: This project supports the engineering development, enhancement, and sustainment of the Tactical Exploitation System (TES), Division TES (DTES), Advanced Electronic Processing Dissemination System (AEPDS), Mobile Integrated Tactical Terminal (MITT), and Forward Area Support Terminal (FAST). The Army's TES incorporates the standards and protocols dictated by the Common Imagery Ground/Surface System (CIG/SS) program. TES brings all of the existing and emerging Army TENCAP capabilities (AEPDS, Modernized Imagery Exploitation System (MIES), and Enhance Tactical Radar Correlator (ETRAC)) into an integrated common baseline that is downsized, modular and scaleable to meet a wide range of contingency requirements. DTES will replace the MITT. TENCAP Common Baseline addresses common subsystems, planned improvements, key activities and ongoing/planned initiatives determined to have potential application to multiple TENCAP systems. MIES, ETRAC, and the CIG/SS portion of TES are funded under PE 0305208A. Specific details are provided in the Tactical Intelligence and Related Activities (TIARA) Congressional Budget Justification Book, Volume II and the Joint Military Intelligence Programs (JMIP) Congressional Budget Justification Book, Vol. II.</p>

C. Acquisition Strategy: As pioneers in streamlined acquisition, ASPO's success in delivering systems as those described above to warfighters can be directly attributed to an environment emphasizing stable funding, low density acquisition, minimal use of MILSPECS, and managed competition. By tailoring existing technology, leveraging the best commercial practices and using commercial and government-off the shelf software, ASPO minimizes risk while maximizing efficiency. Finally, Government and contractor personnel and facilities accomplish dedicated cradle to grave Integrated Logistics Support (ILS) for TENCAP systems through a coordinated effort.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604768A Brilliant Anti-Armor (BAT) Submunition
--	--

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
Total Program Element (PE) Cost	131940	142753	96102	58392	11656	7073	0	0	1780438
D641 BAT	43536	16877	0	0	0	0	0	0	1060087
D687 BAT P3I	49186	80707	68466	58320	11221	5569	0	0	393151
D688 ATACMS BLK II	38308	43015	27586	0	0	0	0	0	321786
D686 ATACMS BLK IIA	652	0	0	0	0	0	0	0	652
D2NT BAT Operational Test	258	2154	50	72	435	1504	0	0	4762

A. Mission Description and Justification: The BAT is the submunition in the Block II missile system that supports the Army's deep fire doctrine calling for the destruction and disruption of threat forces and long range weapons at ranges in excess of 100 kilometers before they can influence the maneuver battle. In the past, the only options have been to engage these targets with attack helicopters or fixed wing aircraft. While effective, these options place critical resources and their air crews at risk. The BAT system significantly reduces this risk through its autonomous acquisition and terminal guidance capabilities to attack well-defended armored forces behind enemy lines. The BAT system includes the BAT submunition, a pre-planned product improvement (P3I) BAT submunition, and the Army Tactical Missile System Block II (ATACMS BLK II) missile. BAT is a dual-sensor (acoustic and infrared) submunition that autonomously seeks out and destroys moving armored vehicles without human interaction. BAT and BAT P3I submunitions are carried deep into enemy territory by the Army TACMS, then dispensed over a large target array to selectively attack and destroy individual targets. The BAT P3I program will improve the sensor and warhead subassemblies to increase lethality and to enable the BAT submunition to attack cold, stationary, armored targets and other critical high priority targets. The ATACMS BLK II missile is a version of the currently fielded and combat-proven Army TACMS Block I missile and is designed to carry 13 BAT or BAT P3I submunitions.

A. Mission Description and Justification: The BAT submunition is an unpowered, aerodynamically stable vehicle approximately 36 inches long, 5.5 inches in diameter, and weighs 44 pounds. The BAT is an acoustic and infrared terminally guided submunition that searches for, tracks, and destroys moving armored combat vehicles. BAT submunitions are carried deep into enemy territory by a variant of the Army Tactical Missile System (ATACMS Block II), then dispensed over concentration of critical high-payoff targets to selectively attack and destroy individual targets. By using acoustic technology, BAT has the advantage of an extremely large footprint, which allows it to compensate for target location errors. Because the BAT is a certified round, it provides for low sustainment costs when coupled with the ATACMS Block II.

FY 1999 Accomplishments Program:

- 37542 Built hardware to support Initial Operational Test and Evaluation (IOT&E) and Live Fire Test and Evaluation (LFT&E) (supports FY 99 incremental funding of test article buildup (total test articles required is 98 BATs))
 - 2999 Continued EMD program
 - 2690 Supported Carrier Flight Testing and Other Integration Activities
 - 305 Conducted Test Range and Target Operation, Maintenance and Improvement
- Total 43536

FY 2000 Planned Program:

- 10078 Support IOT&E/LFT&E Qualification Tests (supports FY 00 incremental funding of test article buildup (total test articles required is 98 BATs))
 - 2811 Conduct LFT&E
 - 2933 Conduct Integration Activities
 - 500 Conduct Test Range and Target Operation, Maintenance and Improvement
 - 100 Trade studies and system improvement and optimization activities
 - 455 Small Business Innovation Research/Small Business Technology Transfer (SBIR/STTR) Programs
- Total 16877

FY 2001 Planned Program: Project not funded in FY 2001

C. Acquisition Strategy: The BAT system is a sole source EMD program. Upon completion of the development program, BAT submunitions will be procured as part of Army TACMS Block II/BAT systems by way of a sole source production contract with Lockheed Martin Missiles and Fire Control-Dallas. Lockheed is the system integrator for the Army TACMS Block II/BAT missile system. This strategy is being followed for the FY99 and FY00 LRIP buys and will be continued through full rate production.

<p>A. Mission Description and Justification: The BAT P3I submunition maintains the Basic BAT length, diameter, and weight configurations while increasing submunition lethality and expanding the target set to be attacked. The BAT P3I program will incorporate new seeker, warhead, and microprocessor technologies into the current Basic BAT configuration while maintaining the current BAT form, fit and maximum commonality of BAT components. This program includes studies/demos pertaining to technology advancements, alternate carriers, target recognition, and acoustic/infrared/millimeter wave characterization of expanded target sets. The BAT P3I is a multi-sensored, terminally guided submunition that searches, tracks, and destroys specific targets including mobile armored combat vehicles, cold stationary armored combat vehicles, Surface-to-Surface missile (SSM) Transporter Erector Launchers (TELs), and Heavy Multiple Rocket Launchers (MRLs). BAT P3I submunitions are carried deep into enemy territory by the Army Tactical Missile System (ATACMS), then dispensed over numerous high-payoff target concentrations to selectively attack and destroy individual targets. D688 ATACMS BLK II	38308	43015	27586	0	0	0	0	0	321786

A. Mission Description and Justification: The Army Tactical Missile System Block II (ATACMS BLK II) is a ground launched, solid propellant, inertially guided Global Positioning System (GPS)-aided missile system with 13 Basic BATs or BAT P3Is as its payload. The mission of the ATACMS BLK II is to delay, disrupt, neutralize, or destroy armored combat vehicles and other critical high-payoff targets. Once the BAT P3I submunition is incorporated into the ATACMS BLK II, the target set will expand to include cold stationary armored combat vehicles. The ATACMS BLK II will carry and dispense BAT and BAT P3I submunitions deep into enemy territory where these submunitions will autonomously track and destroy numerous critical high-payoff targets. The ATACMS BLK II will be capable of being launched from the M270 Launcher with the Improved Position Determining System (IPDS) and the M270A1 launcher. Funds also cover the costs of trade studies/demonstrations pertaining to technology advancements, payload variants, propulsion, guidance and control, and fire control improvements.

FY 1999 Planned Program:

- 24702 Continued Development and Subsystem Qualification
 - 6299 Continued pilot production line and IOT&E preparation activities
 - 3483 Completed PQT and conduct development testing (DT)
 - 1073 Conducted M270A1 Launcher Integration Tests
 - 1451 Conducted C4I System Integration Tests
 - 1300 Continued Command and Control Software Design, Development and Test
- Total 38308

FY 2000 Planned Program:

- 16533 Prepare for and conduct IOT&E
 - 16000 TACMS 2000 Cost reduction activities for Block II/BAT Missile System
 - 4724 Complete missile and submunition integration activities and complete DT
 - 2100 Continue Command and Control Software Design, Development and Test
 - 2000 Complete Launcher Integration Tests
 - 500 Trade studies and system improvement and optimization activities
 - 1158 Small Business Innovation Research/Small Business Technology Transfer (SBIR/STTR) Programs
- Total 43015

B. Acquisition Strategy: The Army Tactical Missile System Block II is a sole source EMD program. Upon completion of the development program, the Army TACMS Block II/BAT systems will be procured by way of a sole source production contract with Lockheed Martin Missiles and Fire Control-Dallas. Lockheed is the system integrator for the Army TACMS Block II/BAT missile system. This strategy is being followed for the FY99 and FY00 LRIP buys and will be continued through full rate production.

D686 ATACMS BLK IIA	652	0	0	0	0	0	0	0	652

A. Mission Description and Justification: The Army TACMS Block IIA (ATACMS Block IIA) will be a ground launched, solid propellant, inertially guided Global Positioning System (GPS) aided missile system with 6 BAT P3I submunitions as its payload. The mission of the ATACMS Block IIA will be to delay, disrupt, or destroy the Block II target sets plus cold stationary armored combat vehicles as well as moving and stationary heavy multiple rocket launchers (MRLs) and surface-to-surface missile (SSM) transporter erector launchers (TELs). The ATACMS Block IIA will be launched from the M270A1 launcher in response to the same Command and Control (C2) systems applicable to the Block I, Block IA, and Block II missiles. The range of the Block IIA missile will be significantly greater than that of the Block II. The Army TACMS Block IIA was terminated and the funds realigned in support of higher priority requirements of the New Army Transformation.

FY 1999 Planned Program:

- 652 Awarded trade studies and system improvement and optimization activities contract

Total 652

FY 2000 Planned Program: Project not funded in FY 2000

FY 2001 Planned Program: Project not funded in FY 2001

B. Other Program Funding Summary: There are no other RDT&E of other appropriation efforts

C. Acquisition Strategy: Not applicable.

D. Schedule Profile: There are no applicable schedule milestones for this effort

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D2NT BAT Operational Test	258	2154	50	72	435	1504	0	0	4762

A. Mission Description and Justification: Project D2NT finances the direct costs of planning and conducting operational testing and evaluation of the BAT submunition by the Operational Test and Evaluation Command (OPTEC). Operational testing is conducted under conditions as similar as possible to those encountered in actual combat with typical soldiers trained to employ the system. OPTEC provides the Army leadership with an independent test and evaluation of both the effectiveness and suitability of the system.

FY 1999 Planned Program:

- 258 IOTE planning and preparation
- Total 258

FY 2000 Planned Program:

- 2096 IOTE planning and preparation. Support IOTE tests.
- 58 Small Business Innovation Research/Small Business Technology Transfer (SBIR/STTR) Programs
- Total 2154

FY 2001 Planned Program:

- 50 IOTE planning and preparation
- Total 50

D202 Army Joint STARS (TIARA)	5316	25676	17898	17713	12833	14372	11527	Continuing	Continuing
<p>A. Mission Description and Justification: The Joint Army/Air Force program objective is to develop a radar, datalink, ground station, and airframe that will provide the capability to locate, track and classify tracked and wheeled vehicles beyond ground line-of-sight during the day, night and under most weather conditions. Radar data from the E-8 Joint STARS aircraft is broadcast to multiple Common Ground Stations (CGS) via a secure surveillance and control data link (SCDL). The rapidly deployable CGS is housed in a Standard Integrated Command Post Shelter (SICPS) and mounted on a High Mobility Multi-Purpose Wheeled Vehicle (HMMWV). The CGS acquisition approach is predicated on an aggressive spiral development approach. This spiral development has and will expand the number and quality of sensor inputs to the CGS and also will expand the CGS' ability to disseminate information to tactical intel and fire support nodes. In addition to receiving Joint STARS Moving Target Indicator (MTI) & Synthetic Aperture Radar (SAR) radar data, the baseline CGS receives Hunter Unmanned Aerial Vehicle (UAV) video, intel broadcasts and National Imagery and disseminates message based information to Army intel and fire support nodes. Block 10 CGS will additionally provide UHF SATCOM connectivity to the E-8 Joint STARS aircraft, receipt of Predator UAV video, direct links for receipt of Airborne Reconnaissance Low (ARL) and U2 MTI radar data and DII COE level 6 compliance. Block 20 CGS will additionally provide accreditation to System High mode to address growing security and information assurance (IA) concerns, integration of the CGS with the ABCS TOC LAN to improve and expand dissemination of CGS products and replacement of the legacy CTT with the objective Joint Tactical Terminal (JTT) to assure continued and improved receipt of intel broadcast data. Beyond Block 20, the CGS spiral development will include direct links (TCDL) with the Predator UAV and Tactical UAV to reduce reliance on UAV ground stations and to reduce the overall TOC footprint IAW CSA medium force initiatives. TCDL will also provide more timely receipt of MTI and SAR radar data from ARL and the follow on Aerial Common Sensor (ACS). Longer term, the CGS will include improved data links and processing to exploit the sensor improvements associated with the Joint STARS Radar Technology Improvement Program (RTIP). The net result of the CGS spiral development will be to integrate signal, imagery, and other intelligence processing into a single ground station, resulting in enhanced battle management as well as significant cost savings. The CGS spiral development will require upgrade of existing data links and addition of data links to improve and expand CGS sensor connectivity and will also require improvements to the CGS software and ADP suite to process the increased intelligence data generated by the JSTARS aircraft and other sensors. The Joint Service Work Station (JSWS) is a variant of the CGS and will use the hardware and software design, analyses and logistics data from the CGS as the basis for its configuration. The CGS supports Land Forces in Joint, Combined and Multinational Formations for a variety of missions. It is deployable, agile, versatile, lethal, survivable, sustainable, affordable and capable of resolving conflicts decisively. The actual radar enhancements and all associated modifications to the Joint Stars air platform are fully funded within the USAF RDT&E PE 060440F.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 2802 Conducted Operational Reliability Demonstration Test (ORDT). • 597 Prepared Information Security (INFOSEC) evaluation report. • 600 Integrated Ground Data Terminal (GDT) Built in Test (BIT) into CGS. • 1317 Developed CGS Army Battle Command System (ABCS) data interchange prototype.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604770A Joint Surveillance/Target Attack Radar System	PROJECT D202
--	---	-------------------------------

Change Summary Explanation: FY2000 – Congressional Increase of \$14.5M. \$10M for SCDL, \$3M for new requirements and \$1.5M for the Joint Service Wideband Datalink.
 FY2001 – Funds were realigned from RDTE to OPA to meet requirements in accordance with the Army Cost Position.

The Joint STARS Program is also related to Air Force PE 060477

D. Acquisition Strategy: In December 1995, the JSTARS Ground Station Program awarded an eight year [basic plus seven one year options] production contract to acquire the balance of ground stations required to meet Army needs. Initial production quantities are designated Low Rate Initial Production (LRIP), and provide a basic capability. This baseline CGS is enhanced via a spiral development approach that adds additional sensor interface, exploitation tools and operator aids. The CGS contract also includes provisions for the design, development and test of various P3I block improvements. Following P3I prove out, the modifications will be folded into the production contract via fixed price contract revisions. All P3Is will be developed and implemented in accordance with the CGS System Improvement Plan (SIP).

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604780A Combined Arms Tactical Trainer (CATT)
--	---

COST <i>(In Thousands)</i>	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
Total Program Element (PE) Cost	21644	19775	18498	8881	5061	5049	5039	Continuing	Continuing
D571 Close Combat Tactical Trainer	9244	13138	7738	4986	5061	5049	5039	Continuing	Continuing
D582 Synthetic Environment Core	0	6637	10760	3895	0	0	0	0	21292
D585 Aviation Combined Arms Tactical Trainer (AVCATT-A) - WRAP	12400	0	0	0	0	0	0	0	12400

A. Mission Description and Justification: The Combined Arms Tactical Trainer (CATT) is a family of combined arms simulation systems designed to support the Army's simulation-based Combined Arms Training Strategy. The initial CATT system is the Close Combat Tactical Trainer (CCTT) which provides the underlying baseline (architecture, terrain data bases, after action review [AAR], semi-automated forces [SAF], and models/algorithms) for future CATT expansions, pre-planned product improvements and system enhancements. Synthetic Environment Core provides for the expansion of the Synthetic Environment baseline to include enhanced Aviation, Engineer, Fire Support, and Air Defense capabilities needed to support integration of hardware/simulators funded by System Program Managers. CATT enables units, from crew to the battalion task force level, to conduct a wide variety of combat tasks on a realistic, interactive synthetic battlefield. CATT's combination of manned simulators and staff officer workstations enables units to train as a combined arms team in a cost effective manner. CATT reinforces the successes and corrects the shortcomings of the Simulator Network (SIMNET) and Aviation Network (AIRNET) demonstration programs executed by the Defense Advanced Research Projects Agency (DARPA). By practicing skills in CATT, units are able to make more effective use of scarce resources and costly live fire and maneuver exercises as well as train tasks deemed too hazardous to conduct in the field. Fielded in both fixed site and mobile/transportable versions, CATT enables both Active and Reserve component units to prepare for real world contingency missions. By being able to process a wide array of terrain data bases and modify the behavior of the computer generated opposing forces, CATT offers a virtually unlimited array of training options to support the Army's many regional contingency missions. The combination of tough field and live fire training and realistic simulation training in CATT is the catalyst to prepare soldiers and their leaders for the uncertainties they will face in an unpredictable world.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604780A Combined Arms Tactical Trainer (CATT)				PROJECT D571				
COST (In Thousands)				FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D571 Close Combat Tactical Trainer				9244	13138	7738	4986	5061	5049	5039	Continuing	Continuing
<p>A. <u>Mission Description and Justification:</u> This program provides for engineering and manufacturing development (EMD) and pre-planned product improvements (P3I) for the Close Combat Tactical Trainer (CCTT) which will enhance readiness of both active and reserve component forces. The program develops a networked system of interactive computer driven simulators, emulators and semi-automated forces that replicate combat vehicles and weapon systems, combat support systems, combat service support systems, and command and control systems to create a fully integrated real-time collective task training environment. This trainer will allow soldiers to practice, repetitively, techniques that, if performed on real equipment, would be too hazardous, time-consuming and expensive. These trainers enhance realism and allow soldiers and units to learn tactical combat lessons on maneuver, command and control, and improved teamwork for increased survivability. The pre-planned product improvements provide CCTT an opportunity to enhance its capabilities as a tactical trainer as well as maintain concurrency with the structural changes that today's battleforce is experiencing.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 6861 Completed EMD contract, provided structured training (STRUCTT) exercises and interface between Commander's Independent Training Tool (CITT) and Maintenance Control Console (MCC), initiated High Level Architecture (HLA) compliance efforts and other Pre-Planned Product Improvements. • 83 Maintained support services to the program office. • 300 Provided government program management, engineering, technical, contract and continuous operational evaluation support. • 2000 Kosovo terrain database development. <p>Total 9244</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 10144 Develop Training Support Packages (TSPs) to support structured approach to preparation for training exercises, complete High Level Architecture (HLA) compliance efforts, and begin Pre-Planned Product Improvements (P3I) for After Action Reports (AAR) and Dismounted Infantry (DI) components of CCTT and other user prioritized P3I. • 2000 Develop Korean terrain database. • 80 Maintain support services to the program office. • 560 Provide government program management, engineering, technical, contract and continuous operational evaluation support. • 354 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR) <p>Total 13138</p>

A. Mission Description and Justification Synthetic Environment Core (SE Core) provides for the engineering, manufacturing, and development (EMD) enhancements to the Synthetic Environment baseline for use in future CATT expansions. This first initiative will support the development and refinement of the SE Core architecture to include functionality for the Aviation Combined Arms Tactical Trainer – Aviation Reconfigurable Manned Simulators (AVCATT-A), which will enhance readiness of the Army (Active and Reserve component forces). The program will provide terrain databases, aviation behaviors, Air Defense capabilities, natural effects (e.g., wind) that enable the Army, specifically the aviation community, to conduct collective training and aviation combined arms training in the virtual environment. SE Core will provide the semi-automated forces (SAF) behaviors to represent the evolving structure, tactics, and procedures of the Army's digitized battlefield. SE Core will provide the additional aviation models to support aviation collective training, and will provide for extended ranges to simulate the aviation weapon systems and communication particular to the aviation community. The program will provide for scenario development to support aviation combined arms and collective training and After Action Review of an exercise.

FY 1999 Accomplishments: Project not funded in FY 1999

FY 2000 Planned Program:

- 4890 Develop aviation semi-automated forces behaviors, an aviation terrain database, interoperability between aviation and ground simulations, and mission planning and controls for the AVCATT-A system. Development and refinement of SE Core architecture.
- 1009 Develop an After Action Review capability, training scenarios, and provide for system High Level Architecture (HLA) compliance. Acquire development hardware to support software development
- 200 Maintain support services to program office.
- 359 Provide government program management, engineering, technical and contract support for the aviation effort and the refinement of the SE Core baseline.
- 179 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)
- Total 6637

D585 Aviation Combined Arms Tactical Trainer (AVCATT-A) - WRAP	12400	0	0	0	0	0	0	0	12400

A. Mission Description and Justification: Aviation Combined Arms Tactical Trainer—Aviation Reconfigurable Manned Simulator (AVCATT-A) is an Army aviation training system for both the active and reserve components. This engineering, manufacturing, and development (EMD) effort will provide the first prototype suite of AVCATT-A equipment which consists of six (6) reconfigurable networked simulators supporting the AH-64A/D, UH-60A/L, CH-47D, OH-58D, UH-1H and AH-1F platforms. Supporting role-player, semi-automated blue and opposing forces (SAF), and after action review (AAR) workstations are also provided as part of the suite. AVCATT-A will be a fully mobile system, capable of utilizing shore and generator power and is deployable worldwide.

AVCATT-A will permit various aviation units to conduct collective task training on a real-time, computerized battlefield in a combined arms scenario. Other required elements that are present on the modern, high intensity battlefield, such as the combat support and combat service support elements are an integral part of the simulation database. The terrain databases, aviation behaviors, Air Defense capabilities, and natural effects (e.g., wind) will be provided through the Synthetic Environment Baseline developed through the Synthetic Environment Core Program.

AVCATT-A is a key component to the Aviation Combined Arms Training Strategy and is designed to provide realistic, high intensity collective and combined arms training to aviation units. AVCATT-A provides Army aviation units (active, reserve and National Guard) the capability to train as they fight prior to deployment to the field, to prepare for deployment to real world contingencies and to support mission rehearsals in deployment areas.

FY 1999 Accomplishments:

- 11140 Developed a prototype Aviation Combined Arms Tactical Trainer - Aviation Reconfigurable Manned Simulation (AVCATT-A) and integrate with the Synthetic Environment Baseline.
- 1260 Provided government program management, engineering, technical and contract support for the development and integration effort.

DC45 Aircrew Integrated Systems - ED	11056	13439	7104	2254	2274	2561	2577	Continuing	Continuing
<p>A. Mission Description and Budget Item Justification: Aircrew Integrated Systems (ACIS) – Engineering Manufacturing Development (EMD) project provides engineering and manufacturing development for those systems and items of equipment which are unique and necessary for the sustainment, survivability, and performance of Army aircrews and troops on the future integrated battlefield and related training missions. The basic Air Warrior EMD programs will focus on air vehicle integration, airworthiness considerations, and user evaluation of multiple technologies to improve aircrew mission performance, aircrew comfort, aircrew and aircrew station interface, safety and survivability. These funds also include work on: advanced laser protection against emerging new threat systems; product improvement of existing helmets to improve performance and increase commonality; development and adaptation of airbag technology to Army aircraft to improve crash protection and enhance aircrew survivability. Follow-on integration and test of Air Warrior program product improvement effort will continue to enhance and maximize aircrew performance in force modernized aircraft by integrating new technologies into the basic Air Warrior ensemble. Maximum advantage will be taken of simulation to reduce program technical risk through early user evaluation and to reduce program design and test cost and schedules. This project does not duplicate any aircraft platform program efforts. Both joint and service independent efforts continue to be pursued under the scope of this project.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 4643 Continued Air Warrior Engineering Manufacturing Development effort and development of technical insertion plan • 509 Continued Advanced Laser Eye Protection (Joint Service) Engineering Manufacturing Development • 4409 Initiated Helmet Mounted Display Engineering Manufacturing Development • 1495 Completed Cockpit Air Bag System (CABS) pre-production evaluation and testing <p>Total 11056</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 6086 Continue Air Warrior Engineering Manufacturing Development for basic ensemble and components design • 6725 Continue Helmet Mounted Display Engineering Manufacturing Development • 300 Continue Advanced Laser Eye Protection (Joint Service) Engineering Manufacturing Development • 328 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR) <p>Total 13439</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 7104 Continue Air Warrior Engineering Manufacturing Development effort for ensemble developmental and operational test <p>Total 7104</p>

D. Acquisition Strategy: An Air Warrior Program Definition and Risk Reduction (PDRR) development contract was awarded in FY 1997 to perform a functional requirements analysis and consider user requirements and available technologies to optimize recommended alternatives within the constraints of cost as an independent variable. The Air Warrior basic ensemble program was approved to proceed into an engineering manufacturing development system life cycle phase in 1st Quarter, FY 1999. Currently, a combined government and contractor team is developing Air Warrior improvements and integrating those components into a basic Air Warrior ensemble that will be integrated with the force modernization aircraft. Prototypes that represent the basic Air Warrior ensemble will be developed for test and evaluation. The Air Warrior aircraft platform specific nonrecurring production engineering will begin during FY 02 in preparation for basic ensemble production, aircraft integration, and fielding. Performance specifications for the joint service advanced laser eye protection program are being developed and will be used for production competition. The Cockpit Air Bag Systems (CABS) common components will be competitively procured using an approved performance specification and interface drawings (except that the initial production quantity will be procured sole-source from the developer). The CABS also requires aircraft platform specific integration nonrecurring engineering and hardware. The CABS aircraft platform specific hardware will be procured competitively. CABS will be installed via field retrofit and production line incorporation (where applicable).

<p>A. Mission Description and Budget Item Justification: Provides for engineering development of weapons and munitions systems. The Multi-Purpose Individual Munition (MPIM) provides the infantry with a fire-and-forget weapon capable of defeating enemy forces in buildings, bunkers, and lightly armored vehicles. The Objective Individual Combat Weapon (OICW) represents the next generation individual soldier's weapon, replacing selected M16 rifles, the M4 series carbine, the rifle-mounted M203 40mm grenade launcher as well as night vision devices and laser range finders. The mortar systems effort supports development of the Mortar Fire Control System (MFCS). The MFCS is a revolutionary improvement in mortar capability, seamlessly linking mortar fires in the future digital battlefield. Additionally, it funds development of a low cost 60mm training round in FY2000 and the Precision Guided Mortar Munition in FY 02 – FY05. The XM982 extended range Dual Purpose Improved Conventional Munition (DPICM) is an extended range 155mm artillery projectile. It will extend the range of the M198, M190A5, M190A6, 155mm Paladin and the lightweight Howitzer to approximately 37 kilometers, with the Modular Artillery Charge System (MACS) in Crusader extending the range to 47 kilometers. Beginning in FY01, funding for the XM982 Program is in Program Element 0604814, Project D708. The Hydra 70 EMD program will accomplish airworthiness testing of the Hydra 70 rocket motor under various flight conditions. The small arms improvement program develops technology to enhance lethality, target acquisition, fire control, training effectiveness, and /or reliability for small arms weapon systems. This project develops a universal mounting bracket for the MK19-3 Grenade Machine Gun.</p>

<p>A. Mission Description and Budget Item Justification: The Objective Individual Combat Weapon (OICW) represents the next generation individual soldier's weapon, replacing selected M16 rifles, the M4 series carbine, the rifle-mounted M203 40mm grenade launcher as well as night vision devices and laser range- finders. The OICW will provide the soldier with significant increases in individual weapon performance that will result in an overall improvement in combat effectiveness to include hit probability, range, lethality, cost per kill, combat load, man/machine interface and sustainability and logistics.</p> <p>FY 1999 Accomplishments: Project not funded in FY 1999</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 7200 Contract award-ammo/fuze development • 7106 Contract award-weapon/fire control development • 395 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR) <p>Total 14701</p> <p>FY 2001 Planned Program: FY 2001 funds for the OICW realigned to PE 0603802A.DAS3 in advanced development.</p>

<p>C. Acquisition Strategy: The OICW prototype system was demonstrated in the Advanced Technology Demonstration (ATD) in FY 1999. Based on the results of the ATD and the requirements of the final Operational Requirements document (ORD) for the OICW system, a decision was made to enter the Program Definition and Risk Reduction (PD&RR) phase rather than Engineering and Manufacturing Development (EMD) in FY00. This PD&RR phase (PE 0603802A.DAS3) will be a simulation based acquisition phase which utilizes modeling and simulation while developing, building and testing only the key high technology necessary to conduct Cost as an Independent Variable (CAIV) trade-offs at Milestone II. This phase will produce a near final design for the OICW. The PD&RR phase will continue into FY2002. The EMD phase (PE 0604802A.DAS1) which begins in FY2002, will complete the final design, development and validation of the training simulators and complete the developmental, operational, and live-fire tests necessary to reach Milestone III in FY06. FY 2000 funding is currently being reprogrammed to conform to this strategy.</p>

D284 Multipurpose Individual Munition				17691	16967	14393	0	0	0	0	0	71859
<p>A. <u>Mission Description and Budget Item Justification:</u> Provides for the engineering manufacturing development (EMD) of a lightweight, shoulder fired, multiple purpose weapon. Provides the infantry with a fire and forget weapon capable of defeating enemy forces in buildings, bunkers, and lightly armored vehicles. The Multi-Purpose Individual Munition/Short Range Anti-Tank Weapon (MPIM/SRAW) is capable of being fired quickly from its carrying configuration and can be safely fired from an enclosure for close battle. It is more versatile than the AT4 system because it can be fired from enclosures and defeat bunkers and various field fortifications. This system will have tremendously increased lethality over the AT4 and will be multiple targets capable. System design will allow for growth, service life extension and technology insertion to support the U. S. Army mission of crisis response to regionally based threats. The Army and U. S. Marine Corps have signed a memorandum of agreement for a horizontal technology integration effort utilizing the USMC SRAW flight module/launcher as the carrier for the MPIM warhead.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 13249 Phase II EMD contract, development, fabrication, and qualification of the MPIM/SRAW system • 955 Twenty missiles for pre-production testing (PPT) • 965 Tested PPT, warhead section and missile flight testing • 575 Systems engineering requirements generation and system level trade studies • 400 Warhead design, development and trade studies • 157 Safe and Arm (grenade S&A design, development and trade studies) • 237 Flight Module risk analysis, design verification and trade studies • 1153 Program management administration <p>Total 17691</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 11227 Phase II EMD contract, development, fabrication, qualification of the MPIM/SRAW system • 400 Cost reduction initiative • 2339 Fifty missiles for preproduction qualification test (PPQT) • 728 Testing – (PPQT) (warhead and missile flight testing) • 765 Systems engineering requirements generation and system level trade studies • 145 Warhead design, development and trade studies • 90 Safe and Arm (grenade S&A design, development and trade studies)

C. Acquisition Strategy: The MPIM/SRAW is a 65-month two phase EMD program which will leverage off the USMC 42-month SRAW EMD contract awarded in June 1994 and the 18-month U. S. Army technology demonstration MPIM/SRAW contract awarded in January 1995. The MPIM/SRAW EMD Phase 1 contract (18 month risk mitigation effort) was awarded in October 1996 with an EMD Phase 2 (maturation) contract (option) award in May 1998. FY99 funding supports PPT and preparation for CDR. FY 00/01 funding will support completion of systems qualifications and maturation in support of Milestone III in FY02. The EMD effort includes dollars to complete a cost reduction initiative (CRI), resulting in increased producibility and a lower average unit production cost.

D613	Mortar Systems	9077	17168	5069	5660	5458	30172	30485	Continuing	Continuing
<p>A. <u>Mission Description and Budget Item Justification:</u> This program provides funds to complete development and type classify items that will enhance the effectiveness, lethality, versatility of use, mobility, and accuracy of mortar systems. Current mortar systems include conventional ammunition with a variety of fuzing and applications, weapons that range from man-portable 60mm to vehicle-mounted 120mm mortars, and related equipment such as fire control, mortar ballistic computer, training devices, and ammunition. Current funding for this project completes development of the digital Mortar Fire Control System (MFCS). MFCS is a revolutionary improvement in mortar capability, seamlessly linking mortar fires in the future digital battlefield. MFCS provides an on-board fire control system that includes a fire control computer, position navigation system, and gun pointing system. MFCS allows mortar crews to set-up in one minute, down from the current eight minutes. Accuracy is increased by a factor of four. Shorter exposure times increase crew survivability. The MFCS is fully compatible with the Advanced Field Artillery Tactical Data System (AFATDS), making mortars an integral part of Force XXI and Army 2010 and beyond fire support network. This will increase situational awareness and reduce the probability of fratricide. Additional funding in FY2000 funds the development and test of a low-cost 60mm full range training round (XM769). This round will decrease the cost of training while increasing safety and lowering environmental impact. FY 2001 begins a Pre-planned Product Improvement (P3I) to the MFCS to develop a variant of the system for use with 81mm mortars and the 120mm towed mortars.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 7063 Continued contractor software development and hardware integration; provided units for Production Qualification Tests (PQT) • 1419 Government hardware integration • 455 Support and management • 140 Development test preparation <p>Total 9077</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 1853 Complete contractor software development (MFCS) • 2023 Government hardware integration • 2013 Support and management (MFCS 1818K and XM769 240K) • 750 Conduct development test (MFCS) • 160 Operational test preparation (MFCS) • 2160 Developmental engineering (XM769) • 725 Developmental tests/Operational tests (DT/OT) (XM769)

C. Acquisition Strategy: The Mortar Fire Control System was approved as a two year Warfighting Rapid Acquisition Program (WRAP) effort. FY 1997 funds were realigned to this program from PE 0203758A (Horizontal battlefield Digitization) in FY 1997. FY 1998 WRAP funding was aligned to this PE in the FY 1998 DoD Appropriations Bill, at the Army's request. Development will be accomplished by the prime contractor (L3 Communications-formerly AlliedSignal Corp. of Teterboro, NJ) teamed with a number of subcontractors. Initial production, scheduled for FY 2001, is planned as an option to the development contract. Development of a light forces variant of the MFCS system will begin in FY 2001. This variant will apply MFCS technology to the 81mm and towed 120mm mortars. The XM769 60mm full range practice round will be developed in house at TACOM-ARDEC, using the 120mm M931 program as a model. Components that are common to other 60mm programs (shell body, fin, and propulsion system) will be provided as GFM to the Load, Assemble, and Pack (LAP) contractor. The LAP may be bundled with the LAP of the M720A1 and M768 High Explosive rounds.

Remark: Because the XM769 is a training round only, the testing need only prove out that 1) the round is safe to use, and 2) the round accurately simulates the tactical round. Formal operational testing is greatly modified. Test hardware is for components that are common to other 60mm rounds. This will be procured by exercising options on existing production contracts.

<p>A. <u>Mission Description and Budget Item Justification:</u> Excalibur (XM982) is a family of extended range, precision guided 155mm artillery projectiles. The first variant carried 64 Dual Purpose Improved Conventional Munitions (DPICM) with self-destruct capability. The second variant will deliver two (2) Product Improved SADARM submunitions. The third variant is a bunker busting Unitary warhead. It will be compatible with all current and future 155mm artillery systems in the U. S. inventory. The XM982 will extend the range of the M198, 155mm Paladin (M109A6), and the lightweight Howitzer to approximately 37 kilometers. The XM982 with the Modular Artillery Charge System (MACS) extends the Crusader range to 47 kilometers. The Excalibur will allow greater stand-off from threats and faster defeat of potential threats, increasing soldier survivability. FY 2001-FY 2005 funds have been transferred to PE 64814.D708.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 1278 Continued design of projectile and structural assembly. Built prototype sub-systems for test evaluation • 1562 Continued design of guidance and instrumentation systems, and simulations. C. Acquisition Strategy: The approved Acquisition Strategy was to award the EMD contract (FY98-01) to a systems contractor through full and open competition utilizing formal source selection. As a result of this strategy, a contract was awarded to Raytheon-TI Systems, Inc., Lewisville, TX on 23 January 1998 for the design, development, fabrication, and engineering services in support of the development and testing of the 155MM ER DPICM XM982 Projectile, with options for the development of a SADARM and UNITARY variant. Two low rate production fixed price ceiling price options were also included in the award for the first year's buy of 3,400 each and the second year's buy of 4,900 each. Additional XM982-D scope identified in FY 1999 (including test rounds for qualification in the Crusader System) will lead to a revised acquisition strategy and a contract restructure.

<p>A. <u>Mission Description and Budget Item Justification:</u> This project addresses the modernization of existing Small Arms Weapon systems. This program provides funds to develop existing and emerging technology to enhance lethality, target acquisition, fire control, training effectiveness, and reliability for small arms weapon systems and munitions. Current small arms include a variety of personal defense weapons (.38 caliber, .45 caliber; 9mm), individual weapons (5.56mm), crew-served weapons (5.56mm-40mm) and related equipment such as fire control, training devices, hand grenades and ammunition. Current efforts focus on the Rifle Launched Entry Munition, improvements to the M249 Squad Automatic Weapon, M16/M4 Rifle, M203 Grenade Launcher, MK19 Grenade Machine Gun, M240B Medium Machine Gun, ammunition, and hand grenades.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • <u>Rifle Launched Entry Munition</u> • 25 Market survey/Program documentation • 150 Program documentation/MS I/II • 150 RFP and source selection • 1950 Contract award • 235 Fabrication of DT/OT hardware Total 2510 <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 420 <u>Lightweight Tripod for Light Machine Gun</u> • 120 Solicitation and evaluation of proposals • 120 Contract award • <u>M249 Rails/BIPOD/Handguard</u> • 60 Contract award • 69 Procure materials • 190 Prototype designs • 100 Prototype fabrication • <u>MK19 Modern Mount</u> • 270 Evaluate hardware samples

<p>A. Mission Description and Budget Item Justification: This project supports the engineering and manufacturing development (EMD) of military tactical bridging for wet and dry gap bridging requirements such as the Common Bridge Transporter (CBT), the Improved Ribbon Bridge (IRB) Bays, Heavy Dry Support Bridge (HDSB), and Bridge Erection Boat (BEB). All bridging work is in support of the increased capabilities of the Multi-Role Bridge Company (MRBC). The completion of the MRBC EMD effort is essential to implement bridging modernization programs, allowing planned force structure reductions. This project also provides for market investigations of engineer construction equipment.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 2051 Prepared and fabricated HDSB EMD System Support Package including Technical Publications & Training. • 923 Completed contractor testing of HDSB EMD Prototype. (Qty – 2) • 2810 Conducted Production Qualification Test (PQT) of HDSB. • 395 Prepared HDSB Production Solicitation. • 210 Modified Bridge Erection Boat (BEB) for engineering evaluation. (Qty –1) • 300 Initiated IRB Flotation Modeling and Simulation. • 482 Conducted market investigation, revised performance specifications, performed Non-Developmental Item (NDI) testing , etc. for reprocurments of construction equipment. <p>Total 7171</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 700 Completion of HDSB prototype contracts. (Qty – 2) • 705 Complete PQT of HDSB. • 414 Fabricate Bridge Erection Boat (BEB) prototypes. (Qty – 4) • 250 Complete IRB Flotation Modeling and Simulation. • 600 Conduct market investigation, revise performance specifications, perform Non-Developmental Item (NDI) testing, etc. for reprocurments of construction equipment. • 74 Small Business Innovation Research/Small Business Technology Transfer (SBIR/STTR) Programs <p>Total 2743</p>

DH02 Tactical Bridging - Engineering Development	332	0	643	1110	828	1981	1980	Continuing	Continuing

A. Mission Description and Budget Item Justification: This project supports the development and transition to procurement of military tactical bridge site mobility equipment to meet requirements such as the Anchorage System for the Ribbon Bridge and Improved Ribbon Bridge (IRB), Access Egress Roadway System (AERS) for bridge approaches, and performance upgrades to the Bridge Erection Boat (BEB).

FY 1999 Accomplishments:

- 100 Conducted market investigation for Bridge Erection Boat (BEB).
 - 232 Obtained BEB to prove out the specification and prepared for FY01 production in RFP.
- Total 332

FY 2000 Planned Program: Project not funded in FY 2000.

FY 2001 Planned Program:

- 100 Conduct Market investigation for Access Egress Roadway System (AERS).
 - 543 Award EMD contract for AERS.
- Total 643

B. <u>Other Program Funding Summary</u>	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	To Compl	Total Cost

<p>A. Mission Description and Justification: The Army has the mission to supply fuel for all land-based forces, including the Marines and the Air Force. This developmental program provides the capability to perform battlefield sustainment operations, including receiving and transferring petroleum from trucks, ships, and permanent and temporary storage facilities; moving petroleum between storage to and within corps and division areas; quality surveillance testing; and dispensing in support of tactical operations, including rapid refueling of airfields. In FY01 this project also includes the development and transition to procurement of water purification equipment which has previously been accomplished in project DL39.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 305 Updated Petroleum Quality Surveillance Lab (PQSL) system specification, program documents and plans. • 90 Initiated pre-planned product improvements in testing capability for Petroleum Quality Analysis laboratory (PQAS). • 307 Initiated development of advanced fuel filter-separators and coalescer elements. • 109 Demonstrated modular fuel farm concept. • 213 Conducted testing of improved PQAS hardware components. <p>Total 1024</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 2750 Award and administer development contract and conduct test/evaluation of PQAS prototypes. • 2037 Award incrementally-funded contract for lightweight pipeline alternatives. • 361 Program management and general support. • 140 Small Business Innovation Research/Small Business Technology Transfer (SBIR/STTR) Programs <p>Total 5288</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 933 Continue development and test/evaluation of PQAS EMD prototypes. • 250 Continue development of pre-planned improvements to PQAS components. • 2389 Award and administer EMD contract for Petroleum Quality Surveillance Lab (PQSL) prototypes. • 1032 Award second increment for lightweight pipeline alternatives. Complete test and evaluation. • 800 Program management and general support.

DL42 Camouflage System - Engineering Development	754	388	380	327	343	486	1456	Continuing	Continuing

A. Mission Description and Justification: Project DL42 provides for development and transition to procurement low cost, low observable systems for suppression of visual, near-infrared, thermal, radar, and acoustic signatures of highly mobile and semi-mobile weapon assets.

FY 1999 Accomplishments:

- 190 Prepared Test Plan for Woodlands Ultra-Lightweight Camouflage Net System (ULCANS).
 - 190 Completed Type Classification Actions for Woodlands ULCANS.
 - 374 Completed Woodland ULCANS Production Qualification testing (PQT)/Operational Test (OT).
- Total 754

FY 2000 Planned Program:

- 191 Complete Desert ULCANS PQT/OT testing.
 - 100 Finalize test report.
 - 86 Prepare final Desert ULCANS Engineering Change Proposal (ECP).
 - 11 Small Business Innovation Research/Small Business Technology Transfer (SBIR/STTR) Programs
- Total 388

FY 2001 Planned Program:

- 280 Prepare draft ECP for Urban ULCANS.
 - 100 Prepare Urban ULCANS PQT/OT test plan.
- Total 380

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604804A Logistics & Engineer Equipment - Engineering Development				PROJECT D461				
COST (In Thousands)				FY 1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
D461	Marine Oriented Logistics Equipment - Engineering Development			1964	4266	1447	1207	2695	2759	2823	Continuing	Continuing
<p>A. Mission Description and Justification: Provides funds for the engineering and pre-production development of equipment in support of the Army's Logistics-Over-The-Shore (LOTS), In-theatre Port Control, and Intercoastal/Riverine Logistics missions. Efforts in FY99 are centered on the completion of Containerized Maintenance Facility (CMF) development (this item replaces current Floating Machine Shops) and pre-production activity on the Logistics Support Vessel acquisition. Componentry Container/Shelter Configuration and Packaging Configurations for the CMF required additional development. Strategy was to complete remaining developmental activity, then immediately commence acquisition, assembly and packaging in the same fiscal year. Activity along these lines is ongoing. The program also provided for minor development work on the Logistics Support Vessel (LSV) prior to the FY 00 procurement. For FY 00, the project supports engineering development for the Joint Modular Lighterage System (JMLS) with the Navy, and the Army's Rapidly Installed Breakwater (RIB) Project; both of which are aimed at allowing defense forces to continue to offload critical equipment and supplies under challenging sea state conditions. Funds support pre-production activity on the LSV Extended Service Program (ESP)/Upgrade including CAIV analysis. Efforts complete the RIB development and center on the Port Communications and Control Center (PCCC). The PCCC program will provide for the safe and effective management of Army and Joint Port Operations during deployment of forces; both under Logistics Over The Shore (LOTS) conditions and operations in existing port facilities. Future year effort completes development efforts on the Landing Craft Utility (LCU) ESP, the Combat Logistics Vessel (CLV), Operating & Support Cost Reduction Hardware, and the New Large Tug.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 1081 Completed design specifications and documentation required prior to Milestone III (full-scale production) approval for the Containerized Maintenance Facility (CMF). • 883 Completed performance specifications, purchase description, and other documentation for Logistics Support Vessel (LSV). <p>Total 1964</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 1731 Complete development of Joint Modular Lighterage System (JMLS) (Sea State 3 Capable) with Navy. • 500 Develop performance specifications, purchase description and other pre-production documents for the LSV ESP/Upgrade. • 1924 Complete final development and testing for Rapidly Installed Breakwater (RIB) Project. • 111 Small Business Innovation Research/Small Business Technology Transfer (SBIR/STTR) Programs <p>Total 4266</p>

A. Mission Description and Justification: This PE supports efforts to develop interoperability of Army programs and products, horizontally and vertically for the digitized battlefield. Project D097 supports development of the C4I Interoperability Network. Also included is the Army portion of engineering development efforts is support of the Combat Survivor Evader Locator System (CSEL) in Project D098. This includes follow-on programs to demonstrated technologies evolving from Wireless Network Access, Communications Network Planning and Management and initiatives to establish a Multiband Radio Integrated testbed. Project D485 supports C4I Systems Certification. It evaluates system's interoperability for the Army XXI battlefield digitization effort, in support of the Vice Chief of Staff of the Army (VCSA) and Army Acquisition Executive (AAE), to identify interoperability issues, develop certification recommendations, and provide architecture assessments by the Digital Integration Lab (DIL). Project D589 Army Systems Engineering & Warfighter Technical Support efforts is recommended by the Army Science Board and directed by the Army Acquisition Executive (AAE) and Vice Chief of Staff of the Army (VCSA). The ASE provides essential technology expertise on all Systems Engineering and Technical Architecture (SE/TA) matters critical to gain Information Dominance and foster interoperability among all Army systems. The Weapons Systems Technical Architecture, Project D591, supports development of the Joint Technical Architecture-Army (JTA-A) which provides the 'building code' foundation for designing, building, fielding, and supporting interoperable systems in an expedient and cost-effective manner. The Near -Term Digital Radio System (NTDRS) is not a new start: It was funded in PE0603713A, D370 in FY1999 & prior and in D615 FY2000. The Army development effort for the Joint Tactical Radio System (JTRS) hardware is funded in D615 in FY 2001-2005. Project D629, Tactical Communications System – Demonstration Validation, provides for insertion of selected proven communications technology from program elements 0602782A, Project AH92 applied research and 0603006A, advanced technology development, into the next phase of development. Note: This is not a new start effort, previously this effort was funded under PE/Proj. 0603805A/D246.

A. Mission Description and Justification: Project D097 - C3I Interoperability Network: Support warfighter systems' interoperability with a virtual command, control, communications, computer, intelligence, electronic warfare and sensor (C4IEWS) Digital Integration Lab (DIL) to help integrate the Army's programs and products, horizontally and vertically for the digitized battlefield, by replicating current and future tactical battlefield environments and enabling/facilitating comprehensive evaluations of new prototypes, evolutionary system developments, new technologies, commercial products, software and systems interoperability. Develop and operate the communications Army Interoperability Network (AIN) to electronically interconnect remote C4IEWS systems, labs/testbeds, field/integration sites, develops facilities and Battle Labs. Develop and apply protocol test tools to assure the capability to support and assess interoperability and compliance with the Joint/Army Technical Architecture's Variable Message Format (VMF) and MIL-STD-188-220 protocol standards suites.

FY 1999 Accomplishments:

- 490 Provided external DIL connectivity to remote battlefield digitization sites for digitization experimentation and tests.
- 331 Upgraded, operated and supported secure DIL Evaluation & Certification Testbed and other facilities supporting experiments/certifications needed for battlefield digitization for Army FDD, Y2K, Joint as well as STO/ACTD/ATD experimentation and evaluation.
- 100 Acquired/updated DIL hardware and software interfacing systems, test tools, and supporting systems for 1st Digitized Division and TA/SA evaluations
- 125 Acquired DIL automated scenario drivers and test analysis tools for FDD evaluations and TA/SA evaluations.
- 350 Developed Prototype Test Tool (PTT) Monitor/decoder V2.1 capabilities to support the Technical Architecture's MIL-Std-188-220B Sync mode, and conformance testing.
- 100 Developed and fielded lower Tactical Internet PTT network Analyzer capability to support MIL-STD-188-220B network operation and performance analysis in FDD
- 260 Developed and fielded VMF test tool, Rel.5, to support correct C4IEWS systems implementation of Technical Architecture's VMF test tool populated with Joint Re-issue 3 database.
- 140 Developed message generation scripting capability for VMF Test Tool (VTT) to support First Digitized Division (FDD), second Digitized Division and the First Digitized Corps.
- 1080 Began Operating Environment (OE) Implementation and COE Process Maturation by defining the OE extensions, identified 3 Application Program Interface (API) implementations, participating in the DII COE RT TWG, and began developing a conformance plan and test suites.

<p>A. <u>Mission Description and Justification:</u> Project D098 - Tactical Radio Accessories: This project will provide for PM participation in the development efforts for the Combat Survivor Evader Locator System (CSEL), a joint program led by the Air Force. This program will provide service, joint, and/or composite operational recovery/rescue forces with the capability to pinpoint the location of and establish communication with downed personnel in need of extraction from hostile territories. The CSEL system will include the capability to pass data directly into the standard warfighter command, control, communications, computer, and intelligence (C4I) systems. The user's equipment will consist of a small hand-held unit used for geopositioning, over-the-horizon data communications, and two-way line-of-sight voice communications.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 451 Program Management Support <p>Total 451</p> <p>FY 2000 Planned Program: Project funded in FY2000.</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 692 Program Support • 310 Test Support/Analysis • 1184 LRIP Contract <p>Total 2186</p>

D485 C4I Systems Certification				4559	5268	3998	3985	3853	3851	3850	Continuing	Continuing
<p>A. <u>Mission Description and Justification:</u> C4I Systems Certification: Evaluate system's interoperability for the Army XXI battlefield digitization effort, in support of the Vice Chief of Staff of the Army (VCSA) and Army Acquisition Executive (AAE), to identify interoperability issues, develop certification recommendations, and provide architecture assessments by the Digital Integration Lab (DIL). Interoperability certification recommendations and assessments are provided to the Army Digitization Office (ADO) and Army System Engineer. Establish and sustain interoperability between Army C4I systems, and between the Army and Joint/Allied C4I communities in support of DOD 4630.5, DODI 4630.8, CJSCI 6212.01, and AR73-1. Provide the Army focal point for the review, staffing, coordination, and development of Army positions for interface interoperability standards and specifications. Participate in Joint/Allied and intra-Army interoperability certification testing and represent the Army in the Joint/Allied Configuration Management Process. Develop and configuration manage two key elements of the Joint/Army Technical Architectures - the Variable Message Format (VMF) message and the MIL-STD-188-220 protocol standards, in support of Army Science Board directive and approved Technical Architectures.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 640 Evaluated and certified IT/C4ISR systems interoperability for FDD, Joint experiments to assure compliance with the Technical and System Architectures • 560 Provided DIL System Engineering and Integration support for conduct of experiments and evaluations to support FDD, Joint Contingency Force AWE, & Joint Tests. • 330 Provided systems engineering, integrated support & field support for identification and resolution of systems' discrepancies and inconsistencies identified during evaluations. • 300 Evaluated and validated Technical and Systems Architectures, including development of tools for compliance evaluation. • 545 Developed and published 188-220B and 47001B application header standards. • 325 Developed/Approved Army/Joint VMF messages. • 332 Obtained Joint Approvals for (43) Army's VMF ICP's for FDD and Y2K • 65 Updated and Maintained VMF data base for evolving standards and provided two new versions to customers • 110 Conducted 6 Army and Joint Configuration control boards • 609 Evaluated, processed and obtained approval of 1100 change proposals • 650 Conducted 10 Joint Certification Testing to include 24 operational systems, and developed over 500 problem reports for analysis by Joint services • 93 Represented the Army in over 24 Joint TADILs, USMTF, OSD tactical data link management plan TDLMP, Joint Interface Requirements <p>Total 4559</p>

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D589 Army Systems Engineering & Warfighter Technical Support	9915	7709	8411	8422	8609	8669	8667	Continuing	Continuing
<p>A. <u>Mission Description and Justification:</u> Army Systems Engineering & Warfighter Technical Support: The ASE provides essential technology expertise on all Systems Engineering and Technical Architecture (SE/TA) matters critical to gain Information Dominance and foster interoperability among all Army systems. The Joint Technical Architecture-Army (JTA-A) provides the ‘building code’ foundation for designing, building, fielding, and supporting interoperable systems in an expedient and cost-effective manner. Army System Engineer (ASE) supports CIO/DISC4/ADO in defining and maintaining the JTA-A and technically influences development and implementation of the JTA. ASE identifies new and emerging standards for integration of new technologies into existing Army Systems and ATD/ACTDs to support Army 2010. The ASE's work efforts associated with the development and implementation of the JTA-A under this project are critical path elements to achieve the Army’s DIV XXI, CORPS XXI, and Army XXI digitization mission, provide the ability to fight and win on tomorrow’s battlefield, and assure compatibility with both Joint and Coalition Warfighters. WTS provides essential technical field expertise, on-site architectural/system analysis and execution planning to integrate emerging technologies and support the next generation of digitization across all 21st Century Battlefield Operating Systems. Promotes joint experiments in conjunction with Joint C4ISR Battle Center (JBC) to foster interoperability between Army Systems and those of other services both joint and coalition. WTS conducts interservice coordination to identify candidate systems, provides expert analysis to define appropriate architecture, evaluates notional designs and conducts performance/cost benefit analysis to recommend viable tradeoffs. Selects target architecture and works with warfighter to engineer appropriate field experiments (Battlelab Warfighter Experiments (BLWE), Army Warfighter Experiments (AWE) and warfighter rotations) to allow selection of appropriate systems and sub-systems for follow-on development and acquisition. Performs technical coordination/integration activities to accelerate system enhancements providing solutions to current user problems in the field capturing soldier ingenuity through on-the-spot soldier input/feedback. Supports development of the operational architecture and implementation of new warfighter information technologies throughout the force structure to achieve Army Enterprise Architecture (AEA) objectives. Develops notional technology driven C4ISR architectures for Army After Next (AAN) in support of AEA.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 1269 Conducted Major design evaluations for Joint Technical Architecture-Army (JTA-A) Interoperability. (Future Scout Calvary System, Tactical UAV, WIN-T, Army Battle Command System Version 5.0) • 1280 Ensured JTA-A Interop Implementation and Assess JTA-A compatibility for Army and S&T Programs (1st. Lt. Division Force Sys. Architecture, 1st. Digitized Corps system Architecture) • 800 Assessed JTA-A interop for Army Systems, (I3A, AMC-ISA) • 600 Technically influenced the development/implementation of Joint Technical Architecture (JTA) • 382 Maintained existing JTA-A Information Technical Standards • 400 Investigated information technical standards for inclusion in JTA-A/JTA

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)		DATE February 2000
BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604805A Command, Control, Communications Systems - Engineering Development	PROJECT D589
<p>FY 1999 Accomplishments: (continued)</p> <ul style="list-style-type: none"> • 169 Technically influenced commercial and international standards forums • 280 Developed preliminary JMTK Reference Architecture and upgraded Mapping API for the Weapon System Technical Architecture Working Group COE. Participated in the DII COE MCG&I. Updated WSTA framework, adding economic factors, and a JTA impact assessment was completed. Developed the Weapon System Technical Architecture Working Group Long Range PM plan. • 2554 Developed Joint Contingency Force (JCF) experimentation plans. Proposed enroute mission planning and rehearsal (EMPRS) initiative and coordinated technical efforts for the same. Developed EMPRS System Architecture – Detail (SA-D) (net vis implementation). Developed major bill of materials (MBOM) for EMPRS. Integrated EMPRS into JCF architecture. Supported synchronization of wideband information data management. • 700 Identified joint experiments and provided inter-service coordination and experimentation design support to Joint Battle Center (JBC). Supported JCF Army Warfighting Experiment (AWE) with joint coordination, early planning and implementation of JCF initiatives. Engineered Joint Intelligence Surveillance and Reconnaissance (JISR) and LINK 16 joint experiments. Conducted Army portion of All Service COMBAT ID Evaluation and Test • 354 Planned and integrated C4ISR concepts for wargames for Army After Next (AAN) exercises. Aligned tech base programs with emerging Army user requirements for 2025 Hybrid Force. Integrated EMPRS as Light Force initiative for Strike Force C4IEWS technology driven architecture concepts. • 243 Conducted information exchange meetings with other services, and provided field engineering support to user experiments and engineered product improvement/technical insertion into post Force XXI AWE systems • 884 Developed and updated the Open Environment Application Program Interface and build prototype efforts to API for WSTAWG DII COE real time prototype effort <p>Total 9915</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 1260 Conduct Major design evaluations for Joint Technical Architecture-Army (JTA-A) Interoperability. • 1292 Ensure JTA-A Interop Implementation and Assess JTA-A compatibility for Army and S&T Programs. • 779 Assess JTA-A interop for Army Systems. • 808 Technically influence the development/implementation of Joint Technical Architecture (JTA). • 591 Maintain existing JTA-A Information Technical Standards. • 608 Investigate information technical standards for inclusion in JTA-A/JTA. • 469 Technically influence commercial and international standards forums.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604805A Command, Control, Communications Systems - Engineering Development	PROJECT D615
--	--	-------------------------------

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D615 JTRS Ground Domain Integration	0	4867	28542	79171	42117	62831	48377	80000	345905

A. Mission Description and Justification: The Near-Term Digital Radio System (NTDRS) program is a Research and Development Program that maximizes the use of Non-Development Item (NDI) and Commercial Off-The-Shelf (COTS) hardware and software. The program provides an interim solution to the long term Army need for greatly enhanced data capacities at Tactical Operations Centers. NTDRS will provide the Army's Tactical Internet Tactical Operation Center (TOC) to Tactical Operation Center (TOC) data distribution from Battalion to Brigade and for all mobile TOC platforms from Division and below in the First Digitized Division and may serve as the proof of concept leading to the integration of the NTDRS waveform/network into the Joint Tactical Radio System (JTRS) Program. FY 2000 funding is the final year of the RDTE dollars in support of the NTDRS. Funding for the NTDRS in FY 1999 and prior resides in PE0603713A, D370. The JTRS Software Architecture Development effort is the responsibility of the JTRS Joint Program Office and is funded under PE0604280A. Beginning in FY 2001, Project D615 supports the Army unique initiatives for the JTRS program. The JTRS is a Research and Development program that will lead to the Services acquiring a family of affordable, scaleable, high-capacity, interoperable Line of Sight (LOS) and Beyond Line of Sight (BLOS) tactical radios. JTRS activity in this program element supports the Army hardware development and testing. The Army must develop hardware that is built to JTRS architecture standards, supports an open standards architecture and a set of software-based, and legacy tactical waveforms. Together, the architecture, the hardware, and the software will yield software programmable and hardware configurable digital radio systems that provide increased interoperability, flexibility and adaptability. The open standards based architecture will also provide the path for future hardware and software growth of delivered systems at minimal cost by allowing the Services to take advantage of advances in technology being realized in the commercial wireless communications marketplace. The JTRS will provide operational forces with an upgraded communications capability for more effective battlespace management and interoperability among Command, Control, Communications, Computers and Intelligence (C4I) Systems supporting the warfighters' goal of realizing a fully digitized battlespace.

FY 1999 Accomplishments: The NTDRS program was funded under PE 0603713A, project D370 prior to FY2000.

- FY 2000 Planned Program:**
- 1022 NTDRS Program Management
 - 606 Completion of NTDRS Testing
 - 2515 Completion of NTDRS Engineering Development and deployment to FDD
 - 593 NTDRS System Integration/Program Technical Support
 - 131 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR)
- Total 4867

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604805A Command, Control, Communications Systems - Engineering Development	PROJECT D615
--	--	-------------------------------

FY 2001 Planned Program:

- 1613 JTRS PMO Support
 - 500 Army Integration – Hardware
 - 1875 Army Integration – JTRS Software/Labs
 - 2254 JTRS System – Power Amp, COSITE, Antenna, etc.
 - 22300 JTRS Hardware Development and Cost of Prototypes
- Total 28542

B. Other Program Funding Summary	<u>FY 1999</u>	<u>FY 2000</u>	<u>FY 2001</u>	<u>FY 2002</u>	<u>FY 2003</u>	<u>FY 2004</u>	<u>FY 2005</u>	<u>To Compl</u>	<u>Total Cost</u>
OPA, Army, ADDS, BU1400/EPLRS*	46855	53003	32675	31920	33857	39657	19143	17657	795183
OPA, Army, ADDS, BU1400/JTRS*							20472	1583443	1603915
RDTE, JTRS, 0603280A/D155	13404								13404
RDTE, JTRS, 0604280A/D162		36520	62218	80065	65691	50917	40121	0	335532

Note: *The BU1400 BLIN is established to procure EPLRS through the FY04 timeframe, which will meet the current AAO. This same BLIN will be used as the core procurement funding line for JTRS, as "productionized" systems become available. Transition to the procurement of JTRS in lieu of EPLRS may occur sooner than FY 05; if segments of the JTRS evolve to a point where production can be initiated earlier (FY03 or FY04).

C. Acquisition Strategy: The NTDRS program maximizes the use of Non-Developmental Item (NDI) and Commercial Off-the-Shelf (COTS) hardware and software. An RDTE contract was awarded competitively in January 1996. The NTDRS was successfully tested in the Division XXI AWE in November 1997, Electronic Proving Ground (EPG) Field Test I in February 1998, and the FBCB2 LUT in August 1998. During FY1999, NTDRS was successfully tested at EPG in Feb/Mar 1999 and successfully participated in other experimental exercises, such as the Navy/USMC Urban Warrior and Navy Fleet Battle Experiment Echo. NTDRS successfully provided TOC-to-TOC data communications capability at the NTC-99-05 rotation in March 1999. This is the first digital data network to enable the ATCCS hosts to intercommunicate between Brigade and Battalion and fight the battle-on-the-move, covering a geographical area of over 1800 square kilometers using only 19 radios for the NTC-99-05. In FY2000 NTDRS will complete design and testing efforts and the NTDRS will participate in the FBCB2 EPG Field Test, FDTE/Limited User Test II (LUTII) and Joint Contingency Force (JCF) exercises to provide the Army's Tactical Internet TOC-TOC data communications. Planned distribution of the NTDRS into the FDD for continued experimentation purposes is scheduled for 4Q FY 2000. Beginning in FY2001 project D615 will support JTRS Army Unique hardware development. The JTRS will support an evolutionary acquisition strategy. The JTRS Joint Program Office (JPO) is responsible for common core activities including developing, maintaining, and evolving the JTRS open standards architecture, providing re-coded versions of legacy waveforms to operate on JTRS architecture compliant hardware, and providing a certifying infrastructure for hardware/software compliance. Following the architecture's validation and a market survey of industry's capabilities, a program review will occur. Following that review, the Services, which retained acquisition and weapon system integration responsibility, will begin

acquiring scaleable JTRS systems commensurate with Service migration plans. The Army portion of the system integration effort will be performed within this Project. Through industry teaming, the JTRS program and architecture will capitalize on previous government sponsored software definable radio activity such as NTDRS, EPLRS, SPEAKEasy, JCIT, TCDL, GLOMO, ULTRACOM, and WRN as well as similar efforts occurring in the commercial wireless information transfer sector. The development of this open standards architecture will foster and facilitate increased competition at all levels for initial acquisitions as well as for future hardware and software upgrades. Further procurement actions will be made by the services to acquire this "proven certified" technology in production configurations to replace the legacy radios in the DoD inventory today.

<p>A. <u>Mission Description and Justification:</u> This program's focus is on the evaluation of emerging communication protocols and enhancements in a controlled lab/testing environment for future Army networks beyond the First Digitized Division (FDD). This approach also provides a method to address and discover interoperability issues early in the development cycle. By providing continuous feedback to the Army System Engineering Office, it is anticipated that technologies can be selected for future versions of the Joint Technical Architecture – Army (JTA-A) faster and with more confidence. Technologies and products come from a variety of sources to include Commercial Industry, Standards Bodies, DARPA, and the Army Communications Science & Technology programs. Execution of this mission is a critical step in the evolution and maturation of communications networks beyond FDD, while at the same time enhancing the Army's tactical communications and demonstrating interoperability within the Army and Joint Community. Output from this task will directly feed future versions of the JTA-A and the Weapons System Technical Architecture Working Group (WSTAWG).</p> <p>Note this program was previously funded under PE/Project 0603805A/D246.</p> <p>FY 1999 Accomplishments: Project was funded under PE/Project 0603805A/D246.</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 1688 Evaluate/integrate emerging new protocols/technologies (i.e., IPV6, reliable multicast, etc.) to enhance the Army's tactical communications. Provide recommendations to the Army System Engineering Office (ASEO) for incorporation into the JTA-A and Weapons System Technical Architecture working group. • 100 Evaluate emerging standards for interfaces with different echelons and platforms related to Airborne networking/communications technologies. • 27 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) <p>Total 1815</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 1728 Evaluate interoperability and evaluate advanced technologies (i.e., mobile technologies, quality of service, (QOS), etc.) for the Army tactical communications. Provide recommendations/assessments to the Army System Engineering Office (ASEO) for incorporation into the JTA-A and Weapons System Technical Architecture working group. • 100 Evaluate architectural capabilities, feasibility, and interoperability transmission capabilities of emerging protocols for higher data rate communications on an airborne platform. Provide recommendations to ASEO for inclusion into the JTA-A. <p>Total 1828</p> <p>Project D629</p>

B. Other Program Funding Summary: Not Applicable

C. Acquisition Strategy: The objective of this program is to validate new TI Capabilities required for Force XXI. In FY97, laboratory integration testing was conducted to reduce risk for Task Force XXI AWE. Similar laboratory was performed in FY98 for Division XXI and for the FBCB2 Limited User Test (LUT). In FY99 new services and components will be added and tested to validate critical technologies for Force XXI beyond FDD.

A. Mission Description and Justification: This Engineering and Manufacturing Development Program funds: (1) improved medical equipment and drugs essential to counteracting lethal and human performance degrading effects of infectious diseases and (2) medical equipment essential to meeting medical requirements on the integrated battlefield, with emphasis on decreased size and weight, yet supporting large numbers of combat casualties. Additionally, foreign medical materiel may be procured for exploitation of advanced technology and development to meet Army medical defense goals. This program element supports the full-scale development of vaccines, prophylactic and therapeutic drugs, resuscitation fluids, and drug products for acquired immune deficiency syndrome (AIDS). This program funds engineering and manufacturing development for both large and small combat casualty care end items for location of casualty, diagnosis, rapid intensive care delivery, intensive care evacuation platforms, and rapidly mobile, lightweight surgical facilities and equipment. Additionally, the program element funds engineering and manufacturing development of medical equipment that provides protection against physiological, psychological or environmental factors that degrade physical performance. This program is primarily managed by the U.S. Army Medical Research and Materiel Command.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604807A Medical Materiel - Engineering Development	PROJECT D849
--	--	-------------------------------

FY 2000 Planned Program: (continued)

- 71 Small Business Innovative Research/Small Business Technology Transfer Research Programs.
- Total 3233

FY 2001 Planned Program:

- 133 Complete Phase 3 study in Egyptian infants and children.
 - 499 Complete Phase 3 pivotal trial in Israel of ETEC vaccine.
 - 174 Complete expanded Phase 2 efficacy study for new adjuvant lot of Campylobacter vaccine.
 - 204 Plan and initiate Phase 3 pivotal trial for new adjuvant lot of Campylobacter vaccine.
 - 1056 Continue six clinical drug trials on Tafenoquine, an antimalarial drug.
 - 51 Submit New Drug Application to the FDA on Primaquine.
 - 50 Conduct a MS III IPR on Primaquine.
 - 179 Prepare Biologics License Application on TBE vaccine and submit to the FDA.
 - 50 Conduct a MS III IPR on TBE vaccine.
 - 200 Prepare Pre-Market Application for Malaria Rapid Diagnostic Device.
 - 50 Conduct a MS II IPR for Malaria Rapid Diagnostic Device.
 - 600 Complete 2-year rat carcinogenicity study of Tafenoquine.
- Total 3246

B. Other Program Funding Summary: Not applicable.

C. Acquisition Strategy: Test and evaluate in-house and commercially developed vaccine candidates in government-managed trials to meet FDA requirements.

A. Mission Description and Budget Item Justification: This program element provides for engineering and manufacturing development of mine and countermine systems. Project D016, Mine Systems Engineering Development, provides for the increased tactical effectiveness and responsiveness of landmines by supporting the development of a minefield command and control (C2) system for the Wide Area Mine (WAM), the Intelligent Combat Outpost (Raptor), the Area Denial Artillery Munition (ADAM)/Remote Anti-Armor Mine (RAAM) Upgrade (which has been renamed the Remote Area Denial Artillery Munition – RADAM), Non-Self-Destructing Anti-Personnel Landmine Alternatives (NSD-A), and an upgrade for the Volcano Dispenser Control Unit. Project D415, Mine Neutralization/Detection Engineering Development, is the engineering and manufacturing development for the Airborne Standoff Minefield Detection System (ASTAMIDS), Ground Standoff Mine Detection System (GSTAMIDS), Handheld Stand-off Mine Detection System (HSTAMIDS), and Countermine Contingency Stock (CMCS). It provides a group of mutually supported mine detection and neutralization devices to counter a variety of threat mines, minefields and obstacles necessary for implementing the Army's Countermine Modernization Plan. Project D434 continues effort on Non-Self-Destructing Anti-Personnel Landmine Alternatives (NSD-A). Project D443 provides for alternatives to anti-personnel (AP) submunitions used in mixed anti-tank (AT) and AP systems.

Adjustments to Appropriated Value			
a. Congressional General Reductions	-225		
b. SBIR / STTR	-684		
c. Omnibus or Other Above Threshold Reductions		-123	
d. Below Threshold Reprogramming	-10427		
e. Recessions	-4102	-104	
Adjustments to Budget Years Since <u>FY 2000/2001</u> PB			+30397
Current Budget Submit (<u>FY 2001</u> PB)	37467	29893	69584

Change Summary Explanation: Funding - FY 1999: Explosive Standoff Minefield Clearer program was terminated. \$10.5M was reprogrammed to other higher priority Army programs. Congress increased the program by \$6.0M. However, \$4.0M was rescinded to support the Non-self Destruct Antipersonnel mixed system replacement studies.

FY 2001: Additional program support was provided in support of the H-STAMIDS EMD effort (+30397).

C. Acquisition Strategy: For Raptor, decision to go sole source or competitive will be based on evaluation of sole source PDRR contractor results. For NSD-A, 12 solicitation respondents were requested to submit proposals for their alternative concept. Cost Plus Incentive Fee (CPIF) contracts for two of the best concepts were awarded for the Early User Experiment (EUE) phase. At the conclusion of the EUE one contractor or a team will be selected to continue into the EMD and Production phases. For ADAM/RAAM Armament Research, Development and Engineering Center (ARDEC) (In-house) will lead the design and development effort. A government owned Load, Assemble, and Pack (LAP) facility will develop processes and tooling for the download of ADAM and RAAM and the creation of the hybrid projectile

C. Acquisition Strategy: ASTAMIDS EMD contractor will be competitively selected for development of Block 0 (helicopter) and Block I (tactical UAV) configurations. EMD contractor will also be awarded production contract for limited quantity Block 0 systems. HSTAMIDS, contractors (two for each project) competitively selected for PDRR phase competition that will lead to a down select for the EMD phase. GSTAMIDS will leverage the Vehicle Mounted Mine Detector ATD effort with two competitively selected contractors for a total of five competing contractors in PDRR. One contractor will continue into EMD. Successful EMD contractors will be awarded initial production contract (sole source) with multiple option year buys. CMCS will use Non-developmental (NDI), Commercial off-the-shelf (COTS), and foreign developed equipment to meet the immediate need.

--	--	-------------------------------

COST (In Thousands)	FY 1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
D434 Anti-Personnel Landmine Alternatives	0	0	12538	6355	0	0	0	0	18893

A. Mission Description and Budget Item Justification: Program provides for development of alternative systems for non self destruct anti-personnel landmines (APLs). The overall goal is to pursue an aggressive program to field alternative system(s) by 2006. This may allow the U.S. to sign the Ottawa Convention.

FY 1999 Accomplishments: Project not funded in FY 1999

FY 2000 Planned Program: Project not funded in FY 2000

FY 2001 Planned Program:

- 2750 Continue Non-Self Destruct Alternatives (NSD-A) government design efforts (initiated under D016)
 - 8323 Continue NSD-A contractor design producibility/manufacturing development (initiated under D016)
 - 1465 Provide general engineering support for NSD-A design efforts
- Total 12538

B. Other Program Funding Summary	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	To Compl	Total Cost

SSN E91700				60811	121809	121562	121448	0	425630

C. Acquisition Strategy: Will competitively solicit for two contracts for development of system level prototypes. At the completion of prototype testing and evaluation, will downselect to the one contractor for continuation of EMD design effort. Option(s) for initial production will be included in contract following downselect.

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2 Exhibit)							DATE February 2000		
BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604814A Sense and Destroy Armor Munition - Engineering Development					
COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
Total Program Element (PE) Cost	30305	24128	52848	66968	66444	56245	28204	Continuing	Continuing
D644 Generic SADARM Engineering Development	30305	24128	21043	2854	0	0	0	0	1030145
D708 XM982 Projectile	0	0	31805	64114	66444	56245	28204	Continuing	Continuing

A. Mission Description and Budget Item Justification: Sense and Destroy Armor (SADARM) munitions will provide an enhanced fire/counterfire capability for 155mm howitzer delivery systems. SADARM can attack targets well beyond the Forward Line of Troops (FLOT) in a fire-and-forget mode. SADARM can be used in day and night, inclement weather and degraded battlefield conditions.

These capabilities will be enhanced by the SADARM Product Improvement (PI) program which began in FY 1997. The PI SADARM submunition will have an enlarged footprint (permitting each submunition to cover approximately three times the area of the Basic SADARM), and improved infrared sensor to see targets from higher altitudes. As a result, the PI SADARM will be more effective against all of its targets. When ejected from the 155mm projectile, the PI SADARM submunitions deploy and descend toward the ground at a constant velocity and spin rate. The submunitions contain an improved sensing mechanism which combines a dual-mode millimeter wave sensor with an improved infrared sensor array. If a target is present within the scan area, the submunition detects and destroys the target. The SADARM Product Improvement Program is in direct support of the new Army Vision/Transformation.

The XM982 (Excalibur) is a family of precision guided, extended range 155mm artillery projectiles with modular payloads of Dual Purpose Improved Conventional Munitions (DPICM), PI-SADARM, and Unitary. It will extend the range of the M190A6, 155mm Paladin and the Lightweight 155mm Howitzer to approximately 37 kilometers, with the Modular Artillery Charge System (MACS) in Crusader extending the range to 47 kilometers. Prior to FY01, funding for the XM982 Program is in Program Element 0604802, Project D695.

Procurement Ammunition, Army, SSN E66300 Proj Arty 155mm SADARM M898	31275	14938	14907						294796

C. Acquisition Strategy: The Cost Plus Incentive Fee (CPIF) contracts were awarded in FY 1986 to Aerojet Electrosystems and Honeywell. In FY 1991, a design select eliminated the Honeywell competition. Aerojet then selected Honeywell (now Alliant Techsystems) as their prime sub-contractor and they have continued this relationship into production. The Engineering and Manufacturing Development contract with Aerojet has been completed.

The SADARM Submunition Product Improvement Program was awarded on 24 February 1997 to GenCorp Aerojet, Azusa, CA for the design, development, fabrication, integration, and testing of improvements on a sole source basis in accordance with FAR 6.302-1, Only One Responsible Source. Due to a funding decrement in FY98, contract restructure modification P00013 was signed on 19 March 1998 reflecting a no cost 5-month period of performance extension (from April 2001 to September 2001). Currently, a contract restructure is in progress to reflect scope changes due to the impacts of additional testing, modeling and simulation efforts required by the user community and the limitations of funding in FY 00.

<i>COST (In Thousands)</i>	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost	
D708 XM982 Projectile	0	0	31805	64114	66444	56245	28204	Continuing	Continuing	
<p>A. <u>Mission Description and Budget Item Justification:</u> XM982 (Excalibur) is a family of extended range, precision guided 155mm artillery projectiles. The first variant carries 64 Dual Purpose Improved Conventional Munitions (DPICM) with a self-destruct capability. The second variant will deliver two (2) Product Improved SADARM submunitions. The third variant is a bunker busting unitary warhead. It will be compatible with M109A6 Paladin, Joint Lightweight Howitzer and Crusader. The XM982 (Excalibur) will extend the range of the 155mm Paladin (M109A6), and the Lightweight Howitzer to approximately 37 kilometers. The Excalibur (XM982) with the Modular Artillery Charge System (MACS) extends the Crusader range to 47 kilometers. The XM982 (Excalibur) will allow for greater standoff from threats and faster defeat of potential threats, increasing soldier survivability. Funding for FY 2001 and beyond has been transferred to 604814 D708 from 604802 D695.</p> <p>FY 1999 Accomplishments: Project funded in PE 0604802A D695</p> <p>FY 2000 Planned Program: Project funded in PE 0604802A D695</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 5000 Initiates the SADARM variant projectile integration, structural analysis, and testing, and conduct contract option IPR. • 6445 Complete design of projectile assembly, continued structural analysis. Build prototype subsystems for test evaluation. • 7543 Complete design of guidance and instrumentation systems. Build prototype subsystems for evaluation, and conducts initial gun fired guidance testing. • 4000 Complete development of system requirements and subsystem requirement allocation. Conduct laboratory and field testing and evaluation. Conduct simulation validation. • 3264 Award systems contract for development of Platform Integration Kit and Enhanced Portable Inductive Artillery Fuze Setter (E-PIAFS) • 5553 Purchase 115 EMD Test Articles <p>Total 31805</p>

C. Acquisition Strategy: The approved Acquisition Strategy was to award the EMD contract (FY98-01) to a systems contractor through full and open competition using formal source selection. As a result of this strategy, a contract was awarded to Raytheon-TI Systems, Inc., Lewisville, TX on 23 January 1998 for the design, development, fabrication, and engineering services in support of the development and testing of the 155MM ER DPICM XM982 Projectile, with options for the development of a SADARM and UNITARY variant. Two low rate production fixed price ceiling price options were also included in the award for the first year's buy of 3,400 each and the second year's buy of 4,900 each. Additional XM982-D scope identified in FY 1999 (including test rounds for qualification in the Crusader System) will lead to a revised Acquisition Strategy and a contract restructure.

D482 Ground Combat Identification (CID)	8153	7125	2380	0	0	0	0	0	121179
D902 Dismounted Soldier CID	7367	1441	2982	0	0	0	0	0	17853

A. Mission Description and Budget Item Justification: The dominant maneuver tactics that allow smaller, more lethal, forces to succeed on the modern battlefield also increase the potential for friendly fire casualties. Thus, a key enabler of complex warfare is the rapid, reliable identification of friends, foes and neutrals. Positive identification at the point-of-engagement is complicated by the capabilities of modern weapons that allow engagements well beyond the range where visual identification is possible, significantly increasing the potential for fratricide. This program is directed toward the design and development of distinct systems to help minimize this battlefield deficiency within the overall Combat Identification architecture. Project D482 addresses the ground-to-ground vehicle mounted mission and Project D902 addresses the dismounted soldier-to-soldier mission.

Change Summary Explanation: Funding - FY99: Funding was reprogrammed to Project D902 to support the redesign of CIDDS helmet electronics and weight reduction effort.
 FY01: Funding adjustment is for Project D902 to complete CIDDS program based on successful realignment of FY 2000 funding.

D482 Ground Combat Identification (CID)		8153	7125	2380	0	0	0	0	0	121179
<p>A. Mission Description and Justification: The Battlefield Combat Identification System (BCIS) is an all weather, day/night, millimeter wave, Low Probability of Intercept/Low Probability of Detection (LPI/LPD), digitally encrypted question and answer system that provides positive identification of friendly platforms out to 5.5 km (clear weather). BCIS was developed to minimize fratricide while maximizing combat effectiveness given rapidly changing and intense tactical situations. BCIS provides positive identification of friendly platforms to aid the gunner or commander to make a rapid shoot/don't shoot decision at the point of engagement. BCIS also provides short range, LPI/LPD situational awareness messages at the platoon level. Any target identification data received by BCIS will be sent through the platform Force XXI Battle Command Brigade and Below (FBCB2) to update the situational awareness database. BCIS has been designated as an Army Horizontal Technology Integration Modernization program and coordinates A-kit integration with 27 host platforms.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 3792 Conducted upgrade, assembly and contractor test of fully functional engineering development models for platform (M1A1/M2A2 ODS) test, log demonstration and government technical test to include NSA certification. Efforts resulted in attaining a Low Rate Initial Production (LRIP) decision. • 2061 Conducted development, design, and fabrication of installation kits (A-kit) for the Abrams/Bradley (M1A1/M2 ODS) vehicles for platform compatibility test. • 955 Conducted A-kit design and development for host platforms (M4 C2V, HMMWV M1114/M998, M113A2 APC, M1064 Mortar Vehicle, and M1068) in coordination with fielding to 1/22 INF Battalion, 1st Bde, 4th ID, identified as First Unit Equipped in FY02. • 145 Validation, verification and accreditation of Battlefield Identification System Environment and Performance Simulator (BISEPS). • 1200 All Services Combat Identification Exercise Training (ASCIET). <p>Total 8153</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 280 Complete upgrade, assembly and contractor test of fully functional engineering development models for platform (M1A1/M2A2 ODS) test, log demonstration and government technical test. • 4224 Continue host platform A-kit design for vehicles in 1st Bde, 4th ID for fielding (M9 ACE, M88 ARV, M109A6, M992, Avenger, M6 Linebacker, etc.). • 672 Complete development, design, and fabrication of installation kits (A-kit) for the Abrams/Bradley (M1A1/M2 ODS) vehicles for platform compatibility test. • 250 Conduct logistics verification demonstration (MANPRINT, maintenance, manuals, etc.). • 911 Conduct platform compatibility technical testing. • 400 Complete development of the North Atlantic Treaty Organization (NATO) Standardization Agreement (STANAG) 4579 for Battlefield Target ID Devices (BTID) and perform modeling to assess vulnerability risk.

BCIS is an Army Horizontal Technology Integration (HTI) program. Above funding does not represent total funding for the SSN level but represents the BCIS portion only of the funding.

C. Acquisition Strategy: RDTE efforts are on going to provide for integration of BCIS on multiple platforms. LRIP quantities are sole source to the EMD producer on a new contract, and a competitive, firm fixed-price, full rate production contract is scheduled for FY03.

D902 Dismounted Soldier CID	7367	1441	2982	0	0	0	0	0	17853
<p>A. Mission Description and Justification: The Combat Identification System Dismounted Soldier (CIDDS) system is a lightweight, laser-based, question and answer type system, used by the individual soldiers to positively identify friendly soldiers. The system includes a compact, eyesafe laser interrogator; a laser detector assembly; an electronic processor unit; and an omni-directional RF responder. The laser transmitter also includes an aiming laser pointer for aiming the soldier's weapon at night when using Night Vision Goggles and provides an embedded training capability that is interoperable with MILES/MILES 2000 training systems. The system will provide combat identification beyond the effective range of the weapon and will exceed the soldier's target acquisition capability under degraded atmospheric conditions. The system will also be directly interoperable with the combat ID functions to be embedded in the Land Warrior equipment suite. The system will fulfill requirements stated in the Operational Requirements Document for use by Army, Marine and Special Operations applications.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 1329 Completed hardware and software design. • 578 Completed weapons integration kit design. • 3000 Initiated redesign of helmet electronics and weight reduction. • 500 Completed fabrication/testing of five prototypes for user evaluation. • 650 Procured long lead items for fabrication of 148 systems. • 1310 Initiated laser interrogator fabrication. <p>Total 7367</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 1140 Complete redesign of helmet electronics and weight reduction. • 6973 Complete fabrication, assembly and test of 148 EMD hardware systems to support technical/operational testing. • 223 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) Programs <p>Total 8336</p> <p>Note: FY00 Planned Program reflects the \$6.895M that was moved from PE 63001.J51 via Internal Reprogramming approved and signed 28 Dec 99. A. Mission Description and Budget Item Justification: The umbrella program to exploit automation technology for the conduct of combat operations is the Army Tactical Command and Control System (ATCCS) program which is a component of the Army Battle Command System (ABCS). The ATCCS program provides automation in the five battlefield functional areas (BFAs) with the following specific systems: (1) Maneuver Control System (MCS); (2) Advanced Field Artillery Tactical Data System (AFATDS); (3) All Source Analysis System (ASAS) for Intelligence/Electronic Warfare; (4) Forward Area Air Defense Command, Control and Intelligence System (FAADC2I); and (5) Combat Service Support Control System (CSSCS) and to other Army Joint and Allied systems. To provide an overall technically sound, cost effective, and operationally responsive approach, the design and development of ATCCS must be accomplished on a total systems basis. The ATCCS Engineering program provides the required systems engineering to assure integrated Army tactical command and control, and the utilization of common hardware and software throughout the five ATCCS nodal systems. This project includes the Central Technical Support Facility (CTSF) which provides a single technical “center of mass” for software checkout and physical system integration. The Common Hardware Software (CHS) project provides common hardware and software to customers to meet their developmental and fielding needs. The Tactical Operations Centers (TOCs) project designs and develops the TOCs that form the structural backbone of the Army’s digitized fielding concept.

DC34 Army Tactical C2 Systems(ATCCS) Engineering	18936	17727	16214	16497	16653	8764	8979	Continuing	Continuing	
<p>A. <u>Mission Description and Budget Item Justification:</u> Project DC34 – Army Tactical C2 Systems (ATCCS) Engineering: The Air/Land Battle Doctrine requires military leaders to make sound and timely command and control decisions to direct the activities of assigned and supporting units. The umbrella program to exploit automation technology in support of this mission is the ATCCS program, a component of the Army Battle Command System (ABCS). The effort to achieve horizontal integration of the ATCCS BFAs, although going on independently in each BFA, was not disciplined enough to address all connections and needs within the entire spectra of command, control, and communications. Therefore, to ensure this horizontal integration effort is complete and fully automated, a significant management, systems engineering and integration effort is required. Within the SE&I line, requirements accomplished are Common Look & Feel/Common Tactical Picture, Joint Common Data Base/Interoperability, Inter-TOC Data Distribution, and Security Engineering (Protection of the Force). In addition, a key component of the overall effort is the Central Technical Support Facility (CTSF) which provides a centralized on-the-ground capability to ensure interoperability among various digitized platforms and serves as the final integration and maturation facility for Common Operating Environment (COE). The CTSF is the Warfighters “Edge” that acts as an enabler for rapid integration of dissimilar software and hardware systems through real time on-site integration of soldiers, contractors, testers, Program Managers, and the requirements community. The CTSF provides a single technical “center of mass” for software checkout and system integration and provides a controlled environment with connectivity to other C4I systems either on-site or through the Army Interoperability Network (AIN) to support digital integration and fielding.</p> <p>FY 1999 Accomplishments</p> <ul style="list-style-type: none"> • 200 Conducted and supported system configuration management /development and support • 1750 Continued ABCS/ABCS Integrated Logistics Support • 1000 Continued ABCS/AWE Testing and Evaluation of all BFA fielded software • 525 Continued ABCS/AWE Fielding/Scheduling • 1797 Continued ABCS/AWE information engineering • 374 Conducted and supported system interoperability engineering • 150 Continued exploring state of the art technology insertion in support of the ABCS program • 175 Continued development and implementation of the ABCS information assurance • 1839 Continued ABCS/AWE System Engineering and Integration • 1560 Continued development of ABCS/AWE System Architecture • 1541 Central Technical Support Facility (CTSF) Fort Hood Operations • 8025 Central Technical Support Facility (CTSF-TD) efforts to meet the Army’s digital fielding requirements. <p>Total 18936</p>

COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost	
DC39 Tactical Operations Centers(TOCs)	4679	6234	6027	7896	5968	0	0	Continuing	Continuing	
<p>A. <u>Mission Description and Budget Item Justification:</u> The Army Tactical Operations Center (TOC) program provides commanders and staff (all echelons of command from Battalion to Corps) with integrated digitized command and control facilities to exploit the enhanced situational awareness and force multiplier effect gained through digitization. The objective is battlefield dominance using interoperable, robust Army Battle Command System (ABCS) components operating in a Defense Information Infrastructure (DII)/Common Operating Environment (COE) compliant architecture. This RDTE program provides continued support to prototype TOCs developed for Division XXI AWE and develops/matures the enabling technologies required to meet the “objective” requirements of the ABCS Capstone Requirements Document (CRD). Examples include TOC wireless LANs and Command Information Center (CIC) intercoms to meet the CRD requirement for a “virtual” TOC (i.e., a TOC which can be widely dispersed, but digitally connected so that each dispersed element is virtually face-to-face and has the same operational picture and situational awareness). Other efforts include a new Command Information Center shelter that meets the mobility, functionality, set up time, and protection requirements. This project also provides funds for the First Digitized Division (FDD) and First Digitized Corps (FDC) TOC integration and required design and engineering of TOC platforms and shelters. The Army TOC program is critical to the success of Army Digitization Modernization and to provide warfighters with the tools to win the information war.</p> <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> • 2000 Sustain Division XXI prototype TOCs • 1679 System and design engineering, technology assessments, and technology integration for First Digitized Division (FDD) • 1000 Program planning, integrated logistics support, program management, test planning, and program integration for FDD. <p>Total 4679</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 1500 Sustain Division XXI prototype TOCs • 3046 Develop enabling technologies and technology insertion. • 1520 System and design engineering for FDD and III Corps • 168 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR) <p>Total 6234</p>

<p>A. <u>Mission Description and Justification:</u> Project D323 Common Hardware/Software (CHS): CHS is the program through which the Army builds its integrated efforts for tying together the Army Battle Command Systems (ABCS). The project provides vehicles (contracts) through which customers can acquire state-of-the-art common hardware/software and associated peripherals to meet developmental and fielding needs. The project also provides software technology support and command post internal structures within shelters. The common software supports Army, other Services and Joint systems. The CHS program is instrumental in digitizing the battlefield. The DII COE project will be established under PE 64818A D334 in FY01. The split of funds is still in effect with the FY99 and FY00 funding breakout for PE 64818 D323.</p> <p>FY 1999 Planned Program:</p> <ul style="list-style-type: none"> • 3459 Continued management of the acquisition and delivery of CHS-2/LCU equipment in support of customer requirements. • 1255 Continued execution of common hardware, software technology and software reuse programs • 520 Continued supporting customers testing efforts with CHS equipment • 200 Continued exploring state of the art technology insertion in support of ABCS programs • 4944 Continued developing and upgrading DII COE products/integrate into ABCS systems and other Army systems <p>Total 10378</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 1395 Continue management of the acquisition and delivery of CHS-2 equipment in support of customer requirements • 3214 Continue execution of common hardware, software technology and software reuse program • 575 Continue supporting customers testing efforts with CHS equipment • 510 Continue exploring state of the art technology insertion in support of ABCS programs • 4985 Continue developing and upgrading DII COE products/integrate into ABCS systems and other Army systems • 4000 Leverage advanced 3-D display Technologies for Army and other services • 330 Small Business Innovative Research/Small Business Technology Transfer (SBIR/STTR) programs <p>Total 15009</p>

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604819A Line-of-Sight Anti-Tank				PROJECT D046	
COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D046 Line-of-Sight Anti-Tank	0	0	26800	21500	14114	14871	15853	0	93138
<p>A. Mission Description and Budget Item Justification: Project D460-LOSAT Engineering & Manufacturing Development: This program focuses on the integration of the Line-of-Sight Anti-Tank (LOSAT) weapon system into an air-mobile configuration in order to help remedy the early entry force lethality shortfall against heavy armor. The LOSAT weapon system consists of a kinetic energy (KE) missile launcher mounted on a heavy High Mobility Multi-purpose Wheeled Vehicle (HMMWV) chassis. LOSAT offers a near-term advanced capability for overwhelming armor destruction with a high rate of fire, increased range, and increased force survivability. LOSAT, deployed in the early entry force, will provide the decisive edge to win swiftly with minimum casualties and provides an assault support weapon capability. LOSAT is strategically and tactically deployable, giving Commanders and decision makers greater flexibility. The performance of this hypervelocity kinetic energy missile (velocity of a mile per second) is not affected by the proliferation of emerging threat active protective systems and enhanced reactive armors which are both rapidly becoming available on the global marketplace. LOSAT was initiated as a DOD-approved Advanced Concept Technology Demonstration (ACTD) program in FY 1998 to position the technology for future acquisition decisions; demonstrate subsystem capabilities in flight tests and dirty battlefield environments; evaluate the utility of the LOSAT technology for the early entry forces; demonstrate an integrated HMMWV-based LOSAT system in-flight test and advanced warfighting experiments; and evaluate affordability issues.</p> <p>The effort funded in this PE supports the New Army Vision/Transformation by adding additional design activities, providing additional test hardware, and conducting additional qualification and Operational tests concurrent with the ACTD to assure additional design maturity support for entry into Low Rate Initial Production (LRIP) in FY 04. This effort supports the ongoing ACTD effort to assure readiness for entry in LRIP in FY 04 at the conclusion of ACTD test/demonstration phase. This is done in lieu of following the ACTD period with a follow-on EMD effort which would delay LRIP until FY 06 or later. The ACTD effort is funded in PE 0603654A.</p> <p>FY 1999 Accomplishments: Project not funded in FY 1999.</p> <p>FY 2000 Planned Program: Funding for New Army Transformation has yet to be determined.</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 26800 Funds will be used in support of the New Army Vision/Transformation. <ul style="list-style-type: none"> a. 5023 – Complete Design of Additional User Requirements into Fire Unit Hardware and Software. b. 8459 – Initiate Fabrication of Additional Fire Units and Missiles for Full Qualification Testing During Period. c. 4544 – Provide Additional Logistics Support Analysis to Support Early Fielding of Tactical Hardware. d. 5277 – Accelerate ACTD Development Tasks to reduce subsequent Risk in Qualification Test Period. e. 1041 – Conduct Early Soldier Involvement in Design Reviews, Tactics, Techniques, and Procedures Development. f. 2456 – Initiate Pilot Production Line to Support Delivery of Production Representative Hardware for Limited User Test. <p>Total 26800</p>

<p>A. Mission Description and Budget Item Justification: The Sentinel, AN/MPQ-64, consists of a HMMWV towed radar-based sensor with its prime mover/power, identification friend or foe (IFF), and FAAD Command, Control, and Intelligence (C2I) interfaces. The sensor is an advanced three-dimensional battlefield X-Band air defense phased-array radar with an instrumented range of 40 km. The Sentinel is capable of operating day or night, in adverse weather conditions, in the battlefield environments of dust, smoke aerosols, and enemy countermeasures. It provides 360 degree azimuth coverage for acquisition tracking. The Sentinel contributes to the digital battlefield by automatically detecting, classifying, identifying, and reporting targets (cruise missiles, unmanned aerial vehicles, rotary wing and fixed wing aircraft). This Modernization Program will improve Sentinel's capability against evolving threats. The Modernization Program will provide increased capabilities for the Sentinel to keep abreast of the evolving technological threat of small radar cross-section targets such as cruise missiles and unmanned aerial vehicles.</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 2299 Conducted Transmitter Prototype Design and Development • 4000 Passive Adjunct Sensor Development • 409 Conducted Waveform Prototype Design and Development <p>Total 6708</p> <p>FY 2000 Planned Program:</p> <ul style="list-style-type: none"> • 2437 Continue Transmitter Prototype Design and Development • 2515 Conduct Waveform Prototype Design and Development • 137 Small Business Innovation Research/Small Business Transfer (SBIR/STTR) Programs <p>Total 5089</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 1377 Complete Transmitter Prototype Design and Development • 4725 Complete Waveform Prototype Design and Development • 465 Integration and Test of Waveforms • 1862 Conduct Target Classification Prototype Design and Development <p>Total 8429</p>

D. Acquisition Strategy: The Modernization Program awarded a sole source CPAF contract to the production manufacturer. The effort will aggressively implement the tenets of Cost As Independent Variable (CAIV) to assure Total Ownership Costs of the Sentinel are reduced. The contractor will be incentivized to reduce both acquisition and operational support costs for the Sentinel program. The program will take advantage of already developed items and certain off the shelf technologies to minimize risk while insuring cost schedule and performance goals are achieved.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development				PE NUMBER AND TITLE 0604823A Firefinder AN/TPQ-47				PROJECT DL85	
COST (In Thousands)	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
DL85 Firefinder AN/TPQ-47	19601	39860	37363	26838	5995	0	0	0	134487
<p>A. <u>Mission Description and Justification:</u> The Firefinder AN/TPQ-47 will replace the AN/TPQ-37 Artillery Locating Radar. This program is in response to the approved Mission Need Statement (MNS) for the Advanced Firefinder System which describes an urgent need for a longer range and less manpower intensive radar. An Operational Requirements Document (ORD) for the Firefinder AN/TPQ-47 was approved 25 Sep 96. The Firefinder AN/TPQ-47 will double the current artillery range performance out to 60km and improve the target throughput up to 50 targets per minute in a highly mobile, transportable and survivable system. The Firefinder AN/TPQ-47 will provide a new capability of missile and rocket detection at ranges of 150-300 km and will be capable of alerting Theater Missile Defense Systems. The system will be capable of C-130 roll-on/roll-off transportability for rapid deployment. Crew size will be reduced from 12 to 8. This program will leverage off the AN/TPQ-36(V)8 Electronics Upgrade program by using the same man-machine interface. The Firefinder AN/TPQ-47 will be integrated into the Army Tactical Command and Control System (ATCCS) by interfacing with the Advanced Field Artillery Tactical Data System (AFATDS).</p> <p>FY 1999 Accomplishments:</p> <ul style="list-style-type: none"> • 417 Completed program planning and conducted Integrated Baseline Review (IBR) • 927 Began development and ordered parts for the Radar Environmental Simulator System (RESS) • 1489 Awarded subcontract and began internal design for development of Power Amplifier Modules • 1408 Awarded subcontract and began development of Joint Technical Architecture-Army (JTA-A) compliant operational software • 9852 Completed preliminary design and conducted Preliminary Design Review (PDR) • 611 Continued simulation efforts to develop target and clutter models and initiated effort with Theater Ballistic Missile (TBM) simulations and initiated test planning with test community • 4897 Procured long lead items <p>Total 19601</p>

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604823A Firefinder AN/TPQ-47	PROJECT DL85
--	--	-------------------------------

FY 2000 Planned Program:

- 3199 Continue development of the RESS and simulation efforts to develop target and clutter models and incorporate Firefinder into TBM simulations
- 5337 Initiate development to provide early warning and cueing of TBMs
- 8278 Continue development and complete JTA-A compliant operational software design, coding and unit test
- 6189 Complete detailed system design and conduct Critical Design Review (CDR)
- 3937 Continue development and manufacture of Power Amplifier Modules and Sub Array Modules for System #1
- 11034 Complete build of System #1 Antenna Transceiver Group (ATG) and begin integration and test
- 823 Prepare Interactive Electronic Technical Manuals (IETMs) and other logistical data
- 1063 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)
- Total 39860

FY 2001 Planned Program:

- 2403 Complete development and Validation & Verification (V&V) of the RESS modeling
- 7874 Continue manufacture of Power Amplifier Modules and Sub Array Modules for Systems #2 and #3
- 13934 Complete build of Systems #2 and #3
- 8616 Complete integration of Systems #2 and #3 and continue contractor engineering test of all systems
- 1551 Prepare training course materials and other logistics data
- 2985 Initiate development of Training Devices
- Total 37363

D. <u>Acquisition Strategy:</u> The EMD contract was competitively awarded as a 43 month effort beginning 1 Jul 98 to provide three (3) production representative systems; however, an additional year has been added to the EMD phase to reduce program risk and allow for additional simulation and test. The contract was re-baselined in Dec 99 to incorporate a revised 53 month program schedule and a revised program cost estimate.

---	------------------------------

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604824A Commercial Operating & Support Savings Initiative (COSSI)	PROJECT D112
--	---	-------------------------------

COST <i>(In Thousands)</i>	FY1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY2004 Estimate	FY2005 Estimate	Cost to Complete	Total Cost
D112 Commercial Operating & Support Savings Initiative	16351	0	0	0	0	0	0	0	21457

A. Mission Description and Justification: The mission of Commercial Operations and Support Savings Initiative (COSSI) is to reduce Army Operations and Support (O&S) costs by routinely inserting commercial items into fielded military systems. The insertion of commercial items is expected to reduce O&S costs by reducing the costs of parts and maintenance, reducing the need for specialized equipment, increasing reliability, and increasing the efficiency of subsystems. An appropriate fielded military system for a COSSI project is one that has some current operational capability and is not near the end of its useful life. Selected proposals will develop, manufacture, and deliver prototype “kits” to the military for installation into a fielded Army system. Each kit will consist of a commercial item, or a combination of items, and will be ready for insertion or use in a fielded military system. COSSI seeks proposals submitted by firms or teams that include at least one for-profit firm. Proposals must also include the written support of a “Military Customer” who has the authority to modify the system and purchase the kits. COSSI is a two-stage process. In Stage I of each selected project, COSSI and the chosen proposer will share the costs of developing and testing the kit, with the proposer contributing at least 25% of the estimated costs of Stage 1. If Stage 1 is successful, Stage II will be initiated. In Stage II, the military customer may then purchase reasonable production quantities of the kit. Payment for the kits and their insertion into the fielded system will be the responsibility of the military customer. The Army further requires that Stage II funding be identified before commencement of Stage I to insure timely transition. COSSI was funded in DOD PE 0603805E through FY1998, transferred to an Army PE 0604824 in FY1999, and is transferred to PE 0708045A in FY2000.

FY 1999 Accomplishments:

- 9136 Aviation – Sand Erosion Resistance Kits for Model 36-155 on Apache/Longbow Helicopter. Adapt commercially available sand erosion resistance components into the inlet particle separator currently installed on the main propulsion turbine engine of the Apache to increase its operational life and reduce Operating & Support costs. Switchable Eyesafe Laser Rangefinder Designator (SELRD) for the Apache AH64 A/D Longbow. Replace the existing AH64 laser that suffers from low power output and parts obsolescence with a commercially developed laser to improve its current capabilities. Install, Integrate and Support Commercial Off-the-Shelf Non-Developmental Item Displays, Digital Map, Stores Management System and Infrared Suppressor to the OH-58DI. This replacement will enhance range/payload capability and crew situational awareness, while significantly reducing Operating & Support costs and improving readiness.
- 1171 Combat Service Support – Remotely Monitored Battlefield Sensor System. Modify a commercially available transceiver for application to the RT-1175A ground sensor repeater resulting in lower maintenance cost. Portable Engine Test Cell Capability. Modify a commercially available JETCAL 2000 portable engine test cell to provide a turn-key portable test set solution for testing installed turbine engines in CH-47 aircraft to reduce engine false removal rates.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604824A Commercial Operating & Support Savings Initiative (COSSI)	PROJECT D112

FY 1999 Accomplishments: (continued)

- 4871 Horizontal Technology Integration - Integrated Mechanical Diagnostics/Health and Usage Management System. Utilize internal hardware and interface components of a commercial unit, developed for the Sikorsky S-76 and S-92 Helicopters, for use on UH-60 Helicopters. This will reduce the spare parts budget and extend the time between overhauls.
- 1173 Maneuver - Low Cost AGT1500 Compressor Blades. Apply patented, low cost, commercial Metal Injection Molding into 1st and 2nd stage compressor blades for the AGT1500 gas turbine engine on the US Army M1 Abrams Tank. This will enable the use of commercial practices and technologies to develop a lower cost compressor blade and vane manufacturing process to lower O&S costs.

COST (In Thousands)	FY 1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
D509 Lightweight 155M Howitzer	963	4782	17384	10748	9922	0	0	0	43799

A. Mission Description and Budget Item Justification: The LW155 Towed Howitzer, a joint program with the Marine Corps, will provide the replacement for the M198, 155mm Howitzer and achieve significant strategic and tactical mobility improvements. Project D509 supports the EMD Phase for TAD, which is a digital fire control system for the basic LW155 Towed Howitzer and could be applied to other current and developmental towed howitzers.

FY 1999 Accomplishments:

- 963 Draft Towed Artillery Digitization (TAD) Joint Acquisition Strategy Report / Acquisition Plan, Performance Specification, and Request for Proposal.
- Total 963

FY 2000 Planned Program:

- 600 Provide Government matrix engineering program support and participation in Integrated Product Teams (IPTs) for the prime development contract.
 - 850 Provide Government Program Management Support and core engineering staff to establish program baseline and conduct Milestone I/II Review.
 - 3212 Award EMD contract to develop Towed Artillery Digitization (TAD) System.
 - 120 Small Business Innovative Research/Small Business Technology Transfer Programs (SBIR/STTR)
- Total 4782

FY 2001 Planned Program:

- 4045 Provide Government matrix engineering program support and participation in Integrated Product Teams (IPTs) for the prime development contract.
 - 1200 Provide Government Program Management support and core engineering staff to establish functional and allocated baselines.
 - 10389 Continue TAD System EMD contract. Develop the TAD System hardware and software baseline.
 - 1750 Fabricate seven sets of test articles. Conduct component level hardware and software testing. Begin system integration efforts.
- Total 17384

--	---	-------------------------------

C. Acquisition Strategy: The overall Joint Acquisition Strategy/Plan parallels the USMC EMD and Production Phases for their LW155 howitzers. The principal strategy for the Army-funded TAD EMD, is to negotiate a CPIF contract with a single contractor to develop, integrate, test and evaluate the TAD System prior to Army LW155 production. This will ensure Army LW155s are fielded with the TAD System already on them. The Marine Corps will monitor, assess and most likely opt to retrofit their fielded LW155 howitzers with TAD. USMC howitzers still in production would then be outfitted with the TAD System prior to fielding.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0604854A Artillery Systems - Engineering Development	PROJECT 516
--	---	------------------------------

COST (In Thousands)	FY 1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
516 Paladin/FAASV	0	0	2494	4613	0	0	0	0	7107

A. Mission Description and Budget Item Justification: The Paladin/FAASV project allows for integration of several system improvements which will provide for: automated dispensing of M231/M232 charge in vehicle; replacement of M82 cartridge primer with a laser ignition system; and upgrade of several components of the Automated Fire Control System (AFCS) XXI. These system improvements provide significantly improved mission effectiveness, increased reliability, maintainability and supportability, as well as reduce life cycle costs and obsolescence.

FY 1999 Accomplishments: Project not funded in FY 1999.

FY 2000 Planned Program: Project not funded in FY 2000.

FY 2001 Planned Program:

- 1314 Perform System Integration and Development of Fire Control TDP Upgrade
 - 670 Fabrication of Sub System Components and Cabling
 - 190 Perform On-Vehicle Component Testing
 - 320 Provide Program Management
- Total 2494

B. <u>Other Program Funding Summary</u>	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	To Compl	Total Cost
PA, WTCV, GA0400 Paladin	11244	26824	8060	5337	13850	20115	3984		89414
PA, WTCV, GA8010 FAASV PIP	3131	229	5	18387	2054	8419	62		32287

C. Acquisition Strategy: The Paladin/FAASV project will leverage both Government and Contractor capabilities to accomplish the development of the Paladin/FAASV system improvement projects. Government in-house engineering will perform some component level design and system integration. Final System Level Testing will be performed by Other Government Agencies (OGA). Competitive contracts will be used for many of the component level design and hardware fabrication. To the extent possible, maximum use of existing commercial off-the-shelf hardware and software will be utilized.

A. Mission Description and Justification: Supports efforts to plan, design, develop, and test information technology solutions to fulfill the Army's Warfighter Support Mission and accommodate changing Army requirements while fulfilling future Army needs. Provides for development and acquisition of Combat Service Support (CSS) and business information technology solutions to help arm, sustain, fix, move, train and man the force. Completed development/acquisition efforts will also enhance sustaining base functions and power projection capabilities and facilitate global messaging and electronic data interchange (EDI). Ongoing development efforts support multiple functional areas including logistics, personnel, transportation, training, medical/health protection, and sustaining base.

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)	DATE February 2000
--	------------------------------

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0605013A Information Technology Development	PROJECT 087
---	---	-----------------------

COST (<i>In Thousands</i>)	FY 1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
087 The Army Distance Learning Program (TADLP)	0	0	4900	4335	4274	5801	4657	Continuing	Continuing

A. Mission Description and Justification: TADLP will provide standard automation and supporting infrastructure to improve Army's ability to train service members and supporting civilian workforce in all Army components. It will enhance institutional and individual training by introducing proven distance learning (DL) enhancements validated by industry and academia into the Army training inventory. TADLP goals include: Providing more efficient training delivery/training support. Travel efficiencies will be garnered through delivery of training to service members at or near their home station. Improving service member morale by allowing members to acquire necessary military training without leaving their home station. Improving efficiency and effectiveness of Army instructors by allowing each instructor to train more students in a shorter period of time. Improving unit readiness due to the reduction in personnel turbulence resulting from long term absence for resident training. This project is not a new start.

FY 1999 Accomplishments: Project funded in O&M Army

FY 2000 Planned Program: Project funded in O&M Army

FY 2001 Planned Program:

- 2256 Program Management
- 314 Logistics Planning
- 1425 Engineering and Technical Support
- 612 Testing
- 293 TADLP Block 3 Engineering Integration
- TADLP Block 4+ Planning and Design

Total 4900

B. <u>Other Program Funding Summary</u>	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	To Compl	Total Cost
OPA SSN BE4173	18750	8187	21490	21790	12346	19141	22845		
OMA APEs 4326615/432612/432126	10393	31097	19786	25755	30748	32696	35005		

C. Acquisition Strategy: Army will use an incremental acquisition strategy to acquire/deploy TADLP. Increments include:
 - Block 1 was completed in FY 1998/99. It provides modern Digital Training Facilities (DTF) incorporating automation and Video-Teletraining (VTT) products to all Army components. These facilities support Army updates to existing courses that emphasize synchronous (direct and immediate) instructor/student interaction using VTT.

UNCLASSIFIED

ARMY RDT&E BUDGET ITEM JUSTIFICATION (R-2A Exhibit)	DATE February 2000
--	------------------------------

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0605013A Information Technology Development	PROJECT 087
---	---	-----------------------

DTFs also include student workstations equipped with personal computers. These PCs can be used for CD-ROM based training. This provides an immediate return on investment by allowing Army instructors to simultaneously provide training to both local and remote students, increasing the class size that can be effectively supported by a single instructor.

- Block 2 through 4 design efforts began in late FY 1999. Block 2 enhances Block 1 DTFs, providing a robust communications/data transmission capability to support expanded asynchronous training by linking students, instructors, and Subject Matter Experts through the Internet and/or other communications media to conduct collaborative training. Block 3 allows automated scheduling of courses and assignment of students to individual courses and locations. Block 4 allows movement from room based televideo to PC based televideo at individual student workstations. and 4 provide additional These efforts also will generate a comprehensive architecture on which to base future TADLP development. Full implementation of these blocks will be completed in FY 2002.
- Design of additional TADLP blocks will begin in FY 2003. Building on successes anticipated for the initial suite of modern tools, Army will redesign its training environment to support a cost-effective mix of synchronous and asynchronous learning tools incorporating lessons learned from industry/academia. Potential enhancements include use of artificial intelligence and other techniques to rapidly tailor courses for individual learning styles and implementing simulation/other automation intensive tools made affordable by technological advances.

099 SIDPERS-3	0	0	9237	6237	5395	5228	4838	Continuing	Continuing

A. Mission Description and Justification SIDPERS-3 replaces SIDPERS 2.5 and 2.75 for Active Army Personnel Operations, and provides the Reserve Components a standard software system for use during mobilization. SIDPERS-3 provides commanders and managers the necessary personnel information to make informed decisions regarding military personnel resources. SIDPERS-3 is a major contributor to the Total Army Personnel Database (TAPDB) and will be the cornerstone of a more reliable and responsive automated personnel information system in support of all Army missions.
This project is not a new start.

FY 1999 Accomplishments: Project funded in O&M Army

FY 2000 Planned Program: Project funded in O&M Army

FY 2001 Planned Program:

- 4171 Post Deployment Software Support (PDSS) - ECPs/SCPs/ICPs
 - 5066 PER Pay Lite development – an integrated personnel and pay process using single source data entry
- Total 9237

OMA APE: 432612/432615	9490	8418	1614	773	1790	2046	2111		

C. Acquisition Strategy: This project uses an Integrated Process Team approach; i.e., configuration management, risk management, testing, schedule, and cost. The OSD Information Technology Overarching Integrated Process Team (IT-IPT) delegated to the Army Corporate Information Officer (CIO) (May 1999) acquisition oversight responsibility of the SIDPERS-3 program. The Acquisition Program Baseline (APB) documents all cost, schedule, and technical performance criteria. Performance goals are defined as task performance of Mission Essential Tasks (MET) and non-METs. Controls are in place to monitor the technical performance of matrix support organizations, including periodic reviews at all management levels. Monthly project status and metrics reports are used. Development, system qualification, and operational and evaluation testing is also conducted. The Test and Evaluation Master Plan (TEMP) established management oversight over the testing program.

A. Mission Description and Budget Item Justification: Funding supports design, development, testing, and program management functions for Transportation Coordinators' – Automated Information for Movement System II (TC-AIMS II). Provides standard DoD integrated information transportation system capability for deployment, sustainment, and redeployment operations during both war and peacetime operations for the active and reserve forces. Integrates unit, installation, and depot-level supply systems to manage inbound/outbound movement, documentation, and requisition information. Supports routine and surge requirements and automates shipping/receiving, and deployment: sustainment and redeployment processes; produces movement documentation, unit move data; and furnishes timely transportation information to major commands, transportation component commands, United States Transportation Command, and the Joint deployment community. Provides In-Transit Visibility data and control over cargo and passenger movement, as a DoD source movement information system. This project is not a new start.

FY 1999 Accomplishments: Project funded in O&M Army

FY 2000 Planned Program: Project funded in O&M Army

FY 2001 Planned Program:

- 3972 Begin development of the modules for second increment of TC-AIMS II, Release 3.02 (Unit Move Enhancement).
 - 2468 Continue support of Joint Program Management Office Civilian Pay, matrix support and contract services for the software development effort.
 - 1639 Provides facilities, supplies, and equipment needed to support continued development.
- Total 8079

B. <u>Other Program Funding Summary</u>	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	To Compl	Total Cost

C. Acquisition Strategy: TC-AIMS II acquisition strategy is to use an incremental, spiral development strategy in compliance with the Clinger-Cohen Act of 1996. The spiral development effort will break out system functionality into four separate releases. The November 1998 Joint Configuration Management Board (CMB) approved spiral development includes the following releases: 3.01 (Unit Movement), 3.02 (Unit Movement Enhanced), 3.03 (Installation Transportation Office (ITO)/Traffic Management Office), and the P3I which will provide a Theater Operations transportation management capability.

A. Mission Description and Budget Item Justification Installation Support Modules (ISM) functions encompass all information management resources and activities used to plan, organize, train, equip, mobilize deploy and sustain the force. The ISM mission is to provide more efficient and effective installation operations, thereby minimizing the adverse impact of on-going reductions of resources for this critical mission area. Consists of ten standard, automated software applications packaged into functional modules that integrate day-to-day Army installation business practices and processes. HQDA DISC4 has assigned management of the ongoing ISM sustainment mission to PEO STAMIS. This project is not a new start.

FY 1999 Accomplishments: Project funded in O&M Army

FY 2000 Planned Program: Project funded in O&M Army

FY 2001 Planned Program:

- 225 Independent Validation Verification (IVV) Testing
 - 4452 Post Deployment Software Support - ECPs/SCPs
- Total 4677

B. Other Program Funding Summary	FY 1999	FY 2000	FY 2001	FY 2002	FY 2003	FY 2004	FY 2005	To Compl	Total Cost
OMA APE: 432612	18568	14133	9487	9439	9423	9754	10114		

C. Acquisition Strategy: This system is in Post Deployment Software Support (PDSS). The present concept calls for the use of full and open competition to satisfy requirements as defined by the Functional Proponent (Director of Information Systems for Command, Control, Communications, and Computers (DISC4).

<p>A. Mission Description and Budget Item Justification: The Army Recruiting Information Support System (ARISS) will provide a robust integrated automation capability to enhance Army recruiting business processes. ARISS will aid Army to attract highly qualified, capable recruits while reducing individual recruiter workload. Army is using an incremental approach to acquire/deploy the ARISS capability. ARISS provides individual recruiters with powerful multi-media laptop computers to aid in performing assigned missions. Recruiters also receive Recruiter Workstation (RWS) software consisting of Packet Projection and Leads increments. Recruiting management will receive automated tools to improve management of the recruiting mission. Deployment of the RWS Packet Projection Increment began in January 1999. The Leads increment and other planned enhancements will aid Army to meet new accession goals in an era of steadily dwindling resources and a shrinking pool of applicants for military service. This project is not a new start.</p> <p>FY 1999 Accomplishments: Project funded in O&M Army</p> <p>FY 2000 Planned Program: Project funded in O&M Army</p> <p>FY 2001 Planned Program:</p> <ul style="list-style-type: none"> • 1384 Program Management • 767 Engineering and Technical Support • 340 Testing • 2596 Headquarters Support System (HSS)/Guidance Counselor Redesign Development • 1757 Guidance Counselor Redesign Development • 1770 Integration with Existing Increments <p>Total 8614</p>

Recruiter Workstation (RWS) increment - Supports recruiter level missions. The first RWS module, Packet Projection (P/P) has been deployed to all recruiters. The second RWS module, Leads/Reports, is currently being developed and will be tested and deployed in FY 00/01.

USAREC Headquarters Support System (HSS) increment - HSS consists of six modules that provide an operational support system to effectively manage personnel and funding and an analytical data warehouse. The HSS will interface with other Army/DoD recruiting and personnel information systems. HSS modules will be integrated into ARISS as they are completed and will be tested and deployed in FY00/01.

Guidance Counselor Applications/Standard Database. This increment will support business process improvements in processing applicants for enlistment by providing military career information to recruits. It will be developed in FY00 and tested and deployed in FY01.

BUDGET ACTIVITY 5 - Engineering and Manufacturing Development	PE NUMBER AND TITLE 0605013A Information Technology Development	PROJECT 193
---	---	-----------------------

COST (<i>In Thousands</i>)	FY 1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
193 Medical Communications for Combat Casualty Care	0	0	3221	2194	2067	2254	0	9736	9736

A. Mission Description and Budget Item Justification: Medical Communication for Combat Casualty Care (MC4) provides support to the medical force structure through the acquisition of digital communications and information technology capabilities for deployable medical forces. MC4 will also integrate Medical Information Systems into the Army Command and Control (C2) structure as it evolves to support Force XXI and Army 2010 and beyond. Initial MC4 efforts are focused on engineering, integrating, testing, and fielding automation infrastructure for Army users of the Joint Theater Medical Information Program (TMIP). FY01 funding supports engineering, integration and testing of information management/information technology to enhance far forward combat casualty care within the First Digitized Division and Corps as well as MC4 project management. This project is not a new start.

FY 1999 Accomplishments: Project funded in O&M Army

FY 2000 Planned Program: Project funded in O&M Army

FY 2001 Planned Program:

- 943 Program Management
 - 454 Logistics Support Planning
 - 1024 Engineering and Technical Support
 - 296 Testing
 - 504 TMIP Integration
- Total 3221

OMA APE 432612	640	0	482	1071	1259	1459	1589		

C. Acquisition Strategy: MC4 supports a number of Army Medical Information Technology/Communications initiatives. The near and mid-term focus of the MC4 program is to engineer, design, test, acquire and field the Army specific automation/communications infrastructure capability to support DoD standard Theater Medical Information Program (TMIP) application software. MC4 acquisition efforts will mirror the incremental or block approach used by the TMIP PM to develop the TMIP application software.

A. Mission Description and Budget Item Justification: Provides interoperability, standardization, and integration across PEO STAMIS logistics systems. Assures sound engineering practices by producing synergy across program lines through reuse of software and hardware; and interoperability between tactical and CSS systems. Introduces new technology and methodologies via tools, techniques and hardware enablers. Supports systems information security essential for data protection in both the sustaining base and tactical environments. Provides PEO STAMIS personnel support for Task Force XXI programs. This project is not a new start.

FY 1999 Accomplishments: Project funded in O&M Army

FY 2000 Planned Program: Project funded in O&M Army

FY 2001 Planned Program:

- 1319 Continue engineering support to PEO STAMIS logistics programs
 - 400 Continue information assurance (security) to ensure data protection.
 - 200 Continue Task Force XXI support
- Total 1919

B. Other Program Funding Summary: Not applicable

C. Acquisition Strategy: This funding line supports interoperability, standardization, and integration across PEO STAMIS logistics systems by capitalizing on a common approach to software development and through introduction of new technologies and methodologies.

<i>COST (In Thousands)</i>	FY 1999 Actual	FY 2000 Estimate	FY 2001 Estimate	FY 2002 Estimate	FY 2003 Estimate	FY 2004 Estimate	FY 2005 Estimate	Cost to Complete	Total Cost
299 Joint Computer-Aided Acquisition and Logistics Support (JCALS)	0	0	42156	16822	17469	23476	27854	Continuing	Continuing

A. Mission Description and Budget Item Justification The Joint Computer-Aided Acquisition and Logistics Support (JCALS) system provides an infrastructure capable of integrating digitized technical data that supports the weapons systems acquisition and logistics life cycle. The system is data driven and provides an automated information systems architecture independent of application. JCALS will initially meet the Services' goal of automating technical manual processes and functions. The JCALS architecture provides a distributed, open systems environment that makes extensive use of both industry and government standards. The architecture is designed for flexibility and growth, and is capable of accommodating additional systems requirements, technological improvements, and new functionality. The initial application being fielded is Joint Technical Manuals.

This project is not a new start.

FY 1999 Accomplishments: Project funded in O&M Army

FY 2000 Planned Program: Project funded in O&M Army

FY 2001 Planned Program:

- 4257 Government Program Management
 - 3253 Prime Contractor Program Management
 - 13253 Engineering and Technical Services
 - 10548 Testing and Implementation
 - 10845 Developed Software Maintenance/Enhancements
- Total 42156

B. <u>Other Program Funding Summary</u>	<u>FY 1999</u>	<u>FY 2000</u>	<u>FY 2001</u>	<u>FY 2002</u>	<u>FY 2003</u>	<u>FY 2004</u>	<u>FY 2005</u>	To Compl	Total Cost

C. Acquisition Strategy: JCALS will incrementally develop, test, and field up to four software packages (SWP) and implement user desired changes or enhancements through a system improvement process. SWP1 incorporated the majority of the infrastructure capabilities and some interfaces plus selected Joint Technical Manual (JTM) capabilities. SWP2 provided additional infrastructure, interfaces, and JTM capabilities. SWP3 will incorporate additional infrastructure capabilities and interfaces plus

provide expanded capabilities to manage, acquire, improve, publish, stock and distribute JTM. SWP3 will be implemented in three increments . Following each increment, a test will be conducted prior to fielding. Full Milestone III will be achieved following completion of the third SWP3 increment. SWP3 is an incremental improvement to the JCALS JTM system. SWP4 will enhance JCALS to support processing of secret data.

A. Mission Description and Budget Item Justification: Provides acquisition support for STAMIS tactical computers through in-house, matrix and contractual efforts to include: - Matrix support for logistics maintenance and warranty efforts; contract negotiations and legal review; software and hardware evaluation testing. STAMIS Computer Contract II (SCC II) contractor customer support for 24 hour hotline; technical upgrades; order processing/tracking reports; and World Wide Web (WWW) site. Contracted technical services for configuration management; tracking and accountability up to the time of equipment delivery. This project is not a new start.

FY 1999 Accomplishments: Project funded in O&M Army

FY 2000 Planned Program: Project funded in O&M Army

FY 2001 Planned Program:

- 869 Continue providing commercial microcomputer systems for Combat Service Support (CSS) Logistics and Personnel and Sustaining Base systems.
- 1337 Continue providing sustained support in the areas of Integrated Logistics Support maintenance, configuration management, and test and evaluation.
- 1276 Continue procurement strategy of acquiring commercial-off-the-shelf hardware and software to meet the requirements for standard CSS automation Information systems. The SCC II and other existing IDIQ microcomputer contracts are utilized for this purpose.
