Description:

The budget line covers the procurement of utility fixed wing aircraft. These aircraft are required to replace the aging fixed wing fleet that will meet the end of their service life within the current Extended Planning Program (EPP). Utility aircraft will be commercial-off-the-shelf, non-developmental, fixed wing aircraft systems. Furthermore, these aircraft are being fielded using the concept of Life Cycle Contractor Support. This system supports the Current to Future Force transition path of the Transformation Campaign Plan (TCP).

Justification:

FY 05 funds will purchase a critically needed medium range aircraft. This aircraft will be used to support senior army leadership, providing transport for commanders, staff, and key personnel.

Description:

The Light Utility Helicopter (LUH) will provide organic general aviation support for CONUS based Table of Distribution and Allowance (TDA) and Table of Equipment (TOE) aviation units in the active and reserve components. The primary mission of the LUH is to provide aerial transport for staff and liaison elements, air messenger service, air movement of supplies, maintenance support, and limited command and control. The LUH will be utilized in disaster relief, search and rescue, homeland security operations, and administrative transport operations. The LUH provides time-sensitive transport of supplies or key personnel, air mobility to assist civil authorities through the execution of search and rescue or disaster relief operations, advanced warning/detection of external threats to include threats to our borders, augmentation of air ambulance capabilities, and limited command and control operations in the conduct of homeland security. This system supports the Current-to-Future transition path of the Transformation Campaign Plan (TCP).

Justification:

The request for FY 2005 has been adjusted to reflect the Fiscal Year 2005 Budget Amendment for Army Aviation Transformation. The remainder of the LUH Program will be addressed in the FY06-11 POM.

FY05 funding is required for procurement and fielding of LUH aircraft, training, training devices, and program support. The LUH System will be supported with Contractor Logistics Support (CLS). The LUH aircraft will be fielded in CONUS-based TDA and TOE units. The LUH aircraft procured in FY05 will be fielded to ARNG TDA units to displace UH-60s.

Description:

The UH-60 BLACK HAWK is a twin engine, single rotor helicopter that is designed to support the Army's air mobility doctrine for employment of land forces in the 21st century. The BLACK HAWK is used in the performance of the Air Assault, General Support, and Aeromedical Evacuation missions. It is designed to carry a crew of four and 11 combat-equipped troops, or an external load up to 9,000 pounds. It performs the missions of transporting troops and equipment into combat, resupplying the troops while in combat, and performing the associated functions of aeromedical evacuation, repositioning of reserves, and command and control. This system supports the Current-to-Future transition path of the Transformation Campaign Plan (TCP).

Justification:

The request for FY 2005 has been adjusted to reflect the Fiscal Year 2005 Budget Amendment for Army Aviation Transformation. FY 05 funds are required for the procurement of aircraft, continuation of fielding, and to provide for Program Management Office operations. The current multiservice, airframe multiyear contract began in FY 2002 and concludes in FY 2006.

Flyaway unit cost is for gross recurring Flyaway cost; Weapon System Procurement Unit Cost includes gross Weapon System cost plus Initial Spares.

The Budget Request reflects production incorporation of the modifications being developed in the UH-60 BLACK HAWK upgrade program (UH-60M) following completion of the FY02-06 airframe multiyear contract.

Description:

The Advance Procurement for the UH-60 BLACK HAWK contains funding for the airframe and engine contracts as well as funding for Government Furnished Equipment(GFE) to support the UH-60 aircraft and mission kit production. GFE includes such items as the Auxiliary Power Unit (APU), Hover Infrared Suppressor System (HIRSS), Armored Crew Seats, and other miscellaneous equipment. This system supports the Current-to-Future transition path of the Transformation Campaign Plan (TCP).

Justification:

Funding in FY 05 is for both Economic Order Quantity (EOQ) and long lead items on the proposed FY02-06 multiyear contract. Advance procurement is also required for the procurement of GFE items, including the T700-GE-700 engine,HIRSS and some avionics items, since their leadtime exceeds the leadtime of the aircraft (with long lead funding).

The request for FY 2005 has been adjusted to reflect the fiscal year 2005 Budget Amendment for Army Aviation Transformation.

Leadtime shown is the manufacturing (production) leadtime, i e the time from contract award to first delivery. 'When required' reflects the number of months after funding is received (December)that delivery is required. GFE delivery to prime contractor is required at least three months prior to end item delivery. CFE airframe is termination liability funding of both long leadtime as well Economic Order Quantity (EOQ) items. Engines are fully funded. Avionics and miscellaneous items include numerous items with differing lead times. APU and Crew seats no longer require Advance Procurement, due to reduction in lead times.

Advance Procurement Requirements Analysis-Funding (P10B)

Date: March 2004

Appropriation/Budget Activity/Serial No:
Aircraft Procurement, Army /1/Aircraft

P-1 Line Item Nomenclature / Weapon System
UH-60 BLACKHAWK (MYP)

(\$ in Millions)

	PLT (mos)	Quantity Per Assembly	Unit Cost	2004			2005

Total Advance Procurement						27.932			34.723

Airframe will be procured on an FY02 through FY06 joint service multiyear contract. The funding requested is for the termination liability associated with the procurement of parts in Economic Order Quantities (EOQ). Engine award for FY04 reflects a Not to Exceed (NTE) contract. Expected definitization (including option pricing) is July, 2004. Advance procurement funding is required for GFE, since all GFE is required at the contractor's facility three months prior to aircraft acceptance. APUs and Crew Seats no longer require AP, due to reduced leadtimes. The production leadtime of these items, coupled with the projected contract award date, necessitates the use of advance procurement funding. Unit price not included for airframe (price is on P5), since funding requested is for termination liability.

Constant Year Cost		9	68	177	236	259	293	250	95	30	14	1428
Present Value		8	64	164	215	232	259	218	82	26	12	1277
AP Proposal												
Then Year Cost		8	65	171	230	258	296	252	97	31	15	1419
Constant Year Cost		9	66	171	228	252	284	238	90	29	13	1374
Present Value		8	62	158	208	226	251	207	78	24	11	1229
AP Savings (Difference)												
Then Year Cost			-3	-7	-9	-8	-10	-14	-6	-2	-1	-56
Constant Year Cost			-3	-7	-9	-8	-10	-13	-6	-2	-1	-54
Present Value			-3	-6	-8	-7	-9	-12	-5	-2	-1	-48

Costs shown are total program outlays. The AP proposal represents the current budget, including the Advance Procurement necessary to execute an FY02-06 airframe multiyear contract. Proposal without AP represents the estimated cost of single year contracting over the same time span. Savings does not include any savings realized in the procurement of unexercised option aircraft or other Customers (Other Service/FMS). Constant dollars shown are FY04. A 3.1% discount factor was applied to the constant year dollars. It should be noted that even assuming single year contracting, some AP is required, since actual production lead time is greater than the effective production lead time. GFE items procured using Advance Procurement funds are not included, since they provide no cost benefit--they are procured in advance in order to support the airframe delivery schedule.

Description:

The TH-67 Creek is a non-developmental commercial, three-seated, single engine, training helicopter with two main rotor blades. It is a variant of the Bell Helicopter Textron, Incorporated 206B-3 helicopter. It is used exclusively at the U.S. Army Aviation Center, Fort Rucker, AL, for Initial Entry Rotor Wing (IERW) training and is being considered for use by the Combined Training Centers. A mix of aircraft with Visual Flight Rules (VFR) and Instrument Flight Rules (IFR) are used. The VFR version is ideal for early stages of flight school because it is lighter, simpler, and less sensitive to the harsher flight maneuvering generated during the students' primary training. The IFR is equipped for the more advanced instrument phase and is more complex and heavier, but does not undergo the harsher primary flight maneuvering generated in earlier training phases. An enhanced configuration of the VFR is in production which offers a training environment for the acquisition of basic navigation/night/night vision goggles skills. All versions of the aircraft are designed to provide safe, effective, and economical in-flight training when used to demonstrate and practice basic helicopter pilot skills. The enhancements in the latest production models permit training in combat skills.

This system supports the Current to Future transition path of the Transformation Campaign Plan (TCP).

Justification:

The request for FY 2005 has been adjusted to reflect the Fiscal Year 2005 Budget Amendment for Army Aviation Transformation.

Description:

GUARDRAIL is an Airborne signal intercept and emitter location system designed to provide tactical commanders with critical battlefield information via a Joint Tactical Terminal (JTT) and other DoD tactical and fixed communications systems (e.g., Guardrail Reporting Shelter--GRS). It currently provides intelligence data via Commanders Tactical Terminal (CTT) to other INTEL users, such as Common Ground System(CGS) and All Source Analysis System (ASAS) via the Tactical Information Broadcast Service (TIBS) and Tactical Reconnaissance Intelligence Exchange System (TRIXS), etc networks. The Army's GUARDRAIL/Common Sensor (GRCS) System provides a highly flexible architecture to allow rapid deployment to support contingency operations, and was designed to support field commanders until Aerial Common Sensor (ACS) is fully fielded to the Future Force in FY17.

The GRCS has integrated the Improved GUARDRAIL V capability for Communications Intelligence (COMINT), the Communications High Accuracy Airborne Location System (CHAALS/CHALS-X) for COMINT precision emitter locations, the Advanced QUICKLOOK (AQL) for electronics intelligence (ELINT) precision emitter location into a single signal intelligence (SIGINT) system. The airborne elements are integrated into the RC-12H/K/N/P/Q aircraft. Ground processing is conducted in the Integrated Processing Facility (IPF). Key performance requirements include a real-time COMINT and ELINT collection and high accuracy target location capability in communications and radar frequencies. The Interoperable Data Link (IDL)/Multi-Role Data Link (MRDL) connects the airborne elements and the ground processing element. A satellite remote relay provides rapid deployment capability. The GUARDRAIL Information Node(GRIFN)is the GRCS downsized and deployable integrated processing facility (IPF), and building block towards the Army Distributed Common Ground Station (DCGS-A). GRIFN will play a vital role in interim DCGS-A which is planned to be demonstrated at the 18th Airborne Corps in FY 04.

GRCS contributes directly to the success of Army Transformation by serving as an operational platform for verification of new or improved technologies necessary for the future Aerial Common Sensor (ACS). The GRCS will support current operations until it is replaced by ACS in FY17.

GRCS Guardian Eagle (GE) System 4 hardware and software upgrades capability will process non-traditional signals, providing intercept military communication emitters, and commercially available hand-held communication devices.

This supports the Current Force transition path of the Transformation Campaign Plan (TCP).

Justification:

FY 05 funds provide for the fielding of the GRCS Systems 1 and 4 Interoperable Airborne Datalink with the Tactical Common Datalink. This is a Total Ownership Cost Reduction (TOCR) initiative which will significantly lower sustainment costs by fielding a more reliable and supportable commercial-based link.

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: Airborne Tactical Common Data Link [MOD 4] 1-03-222-2222

MODELS OF SYSTEM AFFECTED: Guardrail System 1 & 4

DESCRIPTION/JUSTIFICATION:

This modification will replace the GRCS critically obsolete Interoperable Airborne Data Link (IADL) with the reliable, available and maintainable state-of-the-art Tactical Common Data Link (TCDL). Increased data link capability will permit the exploitation of new emitters on the battlefield. This initiative will keep the Army platform interoperable with the Air Force and able to meet the power, space and weight capabilities of the RC-12. Hardware and Software is being developed under the Aerial Common Sensor (ACS) RDT&E, A PE/Project 273744/D028. The RDT&E funding was provided under OSD Total Ownership Cost Reduction (TOCR) initiative.

FY03 funds non-recurring engineering, fabrication and build of ATCDL for System 1 & 4. FY04 funds Airborne TCDLs for System 4. FY05 funds support the installation and fielding of ATCDL to System 1 & 4.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

Description:

DESCRIPTION: Airborne Reconnaissance Low Multifunctional (ARL-M) evolved from two complementary tactical airborne systems ARL-I (Imagery Intelligence (IMINT)), an electro-optic reconnaissance and surveillance system, and ARL-C (communications intelligence (COMINT)) which provides real-time highly accurate radio intercept and location. The ARL-M program integrates the capabilities of ARL-I and ARL-C into a single system to satisfy requirements identified by validated Combat Commanders' Statements of Need (SON). The primary sensors are COMINT with precision Direction Finding (DF) capability, IMINT electro-optics for target identification, and classification and multimode capability including wide area search Moving Target Indicator (MTI) and Synthetic Aperture Radar (SAR). ARL provides near real-time tactical airborne COMINT and IMINT collection support to Joint Task Force (JTF) Commanders. ARL is a multi-INT (combined COMINT and IMINT) system, designed for forward deployment/force projection in Operations Other Than War (OOTW) to mid intensity conflict environments. ARL also conducts daily JCS Sensitive Reconnaissance Operations, is rapidly self-deployable to support contingency operations, and is the airborne Reconnaissance Surveillance Target Acquisition (RSTA) platform of choice for various non-DOD government agencies such as DEA and FEMA. ARL is currently providing an indications and warnings capability to U.S. Forces in Korea. ARL is configured to allow interoperability with other Army and DOD Intell nodes such as Common Ground Station (CGS) and Tactical Exploitation System (TES). ARL uses Tactical Common Data Links (TCDL) to provide Line of Sight (LOS) communication and Joint Tactical Terminals (JTT) to provide intelligence data thru the Tactical Information Broadcast Service (TIBS) and Tactical Reconnaissance Intelligence Exchange System (TRIX) networks. ARL contributes directly to the success of Army Transformation by serving as an operational platform for verification of new or improved technologies necessary for the Future Force Aerial Common Sensor. ARL will continue to support current operations until they are replaced by ACS in FY 17. This system supports the Current transition path of the Transformation Campaign Plan (TCP).

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: Aircraft Survivability Equipment (ASE) [MOD 1] 9-99-99-0000

MODELS OF SYSTEM AFFECTED: ARL-C and ARL-M

DESCRIPTION/JUSTIFICATION:

Modification provides for the addition of aircraft survivability equipment (ASE) suite to include the non-recurring engineering and interference test and analysis with electronic mission equipment. The ASE includes APR-39 Radar Warning Receivers, ALE-47 Flare and Chaff dispensing system and the AAR-47 Missile Warning System. FY03 funds four ASE suites for two ARL-Cs and two ARL-Ms. FY 04 funds four ARL-M Systems (M1, M2, M3 and M6) for ASE.

Description:

The AH-64 is a single main rotor, twin engine, tandem seat attack helicopter armed with HELLFIRE antitank missiles, 2.75 inch rockets, and 30MM gun. The AH-64 is capable of defeating armor in day, night, and adverse weather. The Target Acquisition Designation Sight (TADS) is housed in a turret on the nose of the AH-64 and consists of a TV, Forward Looking Infrared (FLIR), Direct View Optics, Laser Designator/ Rangefinder and Spot Tracker. The Pilot Night Vision Sensor (PNVS) is a FLIR which allows Nap-of-Earth operations at night by the pilot independent of the co-pilot/gunner's FLIR.

This system supports the Current-to-Future transition path of the Transformation Campaign Plan (TCP).

Justification:

As the Army's primary Attack Helicopter, the AH-64 has been integrated in maneuver and fire plans of the combined arms team and will have the primary mission of destroying high value targets. The firepower, speed and agility of the AH-64 will provide a versatility to the combined arms team not otherwise available. Modifications are based on fleetwide reliability, availability, and maintainability (RAM) improvements and limited operational enhancements identified as a result of lessons learned during Operation Desert Storm, and Albania/Kosovo operations.

FY05 procures TADS/PNVS Upgrades, Modernized TADS/PNVS (M-TADS), Airframe Modifications, and miscellaneous mods \$5 million or less.

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: TADS/PNVs Upgrades [MOD 1] 1-94-01-2005

MODELS OF SYSTEM AFFECTED: AH-64 Apache

DESCRIPTION/JUSTIFICATION:

Operational, and logistical improvement.

Provides for system upgrade through new/updated hardware integration into Lots III thru XII TADS/PNVs systems. This is a critical stage in the Longbow remanufacturing effort as it produces a single configuration TADS/PNVs to the AH-64D through the end of MY II (501 aircraft). This mod facilitates maintainers' access to TADS/PNVs systems thereby allowing for accelerated application of outstanding ECPs. Additionally, satisfies program growth and life extension requirements and provides for offsite contractor support for upgrade/integration of hardware in the TADS/PNVs.

Installation costs are included in contract and are not broken out separately.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

Initial contract award was Dec 95. Date of first delivery was Jun 96.

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: Modernized TADS/PNVs (M-TADS) [MOD 4] 1-01-01-0022

MODELS OF SYSTEM AFFECTED: AH-64A Apache Helicopter

DESCRIPTION/JUSTIFICATION:

Funding will procure M-TADS/PNVs modifications for 203 AH-64A Apache helicopters thru FY 08. M-TADS/PNVs is a U.S. Army program to develop, test, integrate, and produce a Second Generation FLIR (SGF) for the Army's entire fleet of AH-64A and AH-64D aircraft. Modification includes M-TADS/PNVs LRU upgrades, TADS Electronic Display and Control (TEDAC) assemblies, and the Improved Helmet Display Sight System (IHDSS) assemblies. The FLIR system enables pilotage of the aircraft and the engagement of targets during night operations and adverse weather conditions. M-TADS/PNVs will leverage technology already invested in electronics, sensors and optics to provide the best sensor available at the lowest cost. Enhancements, over the present Apache FLIR, include increased range for detection, recognition and identification of targets; higher resolution and improved sensitivity for improved safety and pilotage performance, especially in adverse weather; increased capability to identify friend versus foe during hostilities; and increased reliability with a corresponding reduction in O&S costs. TEDAC and IHDSS improve displays in the cockpit to enable pilots to realize the benefits of the FLIR sensor upgrade. These enhancements will improve the overall warfighting capability of the Apache aircraft by: 1) significantly enhancing the pilot's visibility and safety while improving target designation and acquisition; 2) providing improved clarity and ability to fly and navigate using advanced FLIR imagery; 3) improving aircraft survivability with increased standoff ranges; and 4) reducing the risk of fratricide. Installation is included in the contract costs and are not separated out. System supports the Current-to-Future transition path of the Transformation Campaign Plan (TCP).

Description:

The CH-47 heavy lift helicopter is a day/night tandem rotor helicopter powered by two T-55 turbine engines. The CH-47 is the Army's only active heavy cargo helicopter and is a key element in the Contingency CORPS. The Chinook integrates in a system of systems fashion to enhance battlefield mobility for tactical vehicles, artillery and engineer equipment, personnel and logistical support equipment. Cargo Helicopters provide the logistical base for Air-Land operations. The Chinook also provides support of operations other than war. The CH-47F Operational Requirements Document (ORD) contains interoperability key performance parameters allowing the Chinook to operate on the digitized battlefield. The ORD is being revised to include the specific information exchange requirements. This system supports the Current Force-to-Future Force transition path of the Transformation Campaign Plan (TCP).

Justification:

The request for FY 2005 has been adjusted to reflect the Fiscal Year 2005 Budget Amendment for Army Aviation Transformation. FY 05 funding procures safety and operational modifications to the CH-47D fleet and trainers to maintain the latest configuration. Safety and operational modifications, to include component recapitalization, are planned for all fielded aircraft. These changes contribute to the effectiveness of heavy lift capability, maintainability, reliability, and aircraft/crew safety. The major modifications are procurement of kits for Improved Battery, Conversion of the T55-L-712 to T55-GA-714A Engines, Auxiliary Power Unit Upgrade, Extended Range Fuel System, Engine Fire Extinguisher, Engine Filtration System, Low Maintenance Rotor Head, Aviation Combined Arms Tactical Trainer and conversion of 287 CH-47Ds to CH-47Fs, Ballistic Protection Systems, Blade Fold Kits, 50 Special Operations Aircraft and Sets, Kits and Outfits.

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: Engine Filtration System [MOD 3] 1-93-01-0807

MODELS OF SYSTEM AFFECTED: CH-47D CHINOOK, MH-47E, and Trainers

DESCRIPTION/JUSTIFICATION:

Type of Improvement - Improved Operational Capability. This funding provides an engine filtration system to separate sand and dust at the engine inlet to allow clean air to flow into the engine. For missions requiring extended operation at very low altitudes over sand and dust terrain, separation of sand and dust at engine inlet is a necessity to assure normal engine life for sustained operations. Procurement of this system is essential to assure operation in sandy or dusty regions. This effort is a follow-on to modify an existing engine filtration system design, modify existing kits and procure new kits.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: Engine Upgrade to T55-GA-714A Configuration [MOD 5] 1-96-01-0828

MODELS OF SYSTEM AFFECTED: CH-47D CHINOOK and Trainers

DESCRIPTION/JUSTIFICATION:

Type of Improvement - Improved Operational Capability. This modification will upgrade the T55-L-712 engine to T55-GA-714A configuration increasing power to allow the aircraft to carry its primary payloads under high altitude/temperatures. The CH-47D as configured does not meet its existing 1975 Required Operational Capability (ROC), i.e. 15,000 lbs. payload for 30 Nautical Miles radius at 4,000 feet/95 degrees Fahrenheit. The addition of numerous engineering changes to provide safety, the latest in operational technology, and improved communications has increased the empty weight of the aircraft. Upgrade of the T55-L-712 engine to T55-GA-714A configuration will meet the required operational capability. The program consists of: New Engines - two per aircraft plus spares, Engine Fielding Kits - two per aircraft, Airframe Mod Kits - one per aircraft, the installation of the Airframe Kit and Converted Engines on the aircraft, and Logistic Support (training, fielding support).

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

Low Rate Initial Production Contract Award - Dec 97
 First Production Hardware Delivery - Aug 99
 Verification/Testing - Sep 99
 Engine Fielding Initiated - Nov 99

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: CH-47D Flight Simulator Upgrade [MOD 8]

MODELS OF SYSTEM AFFECTED: CH-47D and Trainers

DESCRIPTION/JUSTIFICATION:

Type of Improvement - Safety. The six 2B31 flight simulators are based on 1970's technology and are very expensive to operate and maintain. This program upgrades the remaining four simulators not funded by other sources. Additionally, aircraft concurrency modifications to the simulator have fallen well behind the actual CH-47D aircraft, resulting in negative habit training transfer. Correction of this deficiency will reduce maintenance, resolve safety concerns, and increase reliability and maintainability.

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: CH-47F [MOD 9] 0-00-00-0000

MODELS OF SYSTEM AFFECTED: CH-47D/F

DESCRIPTION/JUSTIFICATION:

The CH-47F is a rebuild program with selected upgrades. This program extends airframe service life, introduces an open electronic architecture that is compatible with the Army XXI digitized battlefield, and reduces Operating and Support (O&S) cost. This heavy lift helicopter program will be based on a recapitalization approach with a common cockpit configuration. The airframe will be rebuilt, mission capability improved, and vibrations reduced through airframe stiffening to provide for long term O&S cost reductions. The CH-47F will sustain the aging CH-47D fleet and bridge the gap until the development of a follow-on aircraft. It will be fielded as a direct replacement for 287 of the 431 CH-47D fleet and 50 Special Operations Aircraft. Recap will replace the present concept of Inspect and Repair Only As Necessary to a systematic recapitalization of key components to a zero time, zero mile condition. Recapped components will include Power Train, Auxiliary systems, Electrical / Electronic, Hydraulic, Pneumatic, Structural, and Power plant systems. Aircraft in totality will be Recapped based on the functional analysis completed on all the discrete subsystems. The analysis will be used to insure that the components or structure replaced will enhance reliability, increase safety and/or reduce O&S costs.

MODIFICATION TITLE: Low Maintenance Rotor Hub [MOD 10] 0-00-00-0000

MODELS OF SYSTEM AFFECTED: CH-47D&F

DESCRIPTION/JUSTIFICATION:

The Low Maintenance Rotor (LMR) hub will replace the current hubs that are the number two and number three Operation and Support cost drivers in the CH-47 fleet. Utilizing elastomeric and self-lubricating bearing design features, the LMR will eliminate an average of ten days of unscheduled maintenance per year/per aircraft. The new hub will have about 60 percent fewer parts and a projected 4500-hour life for all machined part components. All components will be field replaceable and will not require scheduled overhaul by Depot. The LMR will be inter-changeable with the existing hub and retain the same flight dynamics. The initial production contract will procure new Hubs for the CH-47F production line to meet component recapitalization standards until LMR hubs are delivered.

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: Aircraft Replenishment [MOD 14] 0-00-00-0000

MODELS OF SYSTEM AFFECTED:

DESCRIPTION/JUSTIFICATION:

The request for FY 2005 has been adjusted to reflect the Fiscal Year 2005 Budget Amendment for Army Aviation Transformation. FY05 funding procures four new CH-47F aircraft and FY09 funding procures six new CH-47F aircraft to replace aircraft lost during operational missions and aircraft transferred to Special Operations requirements. The new build program is an extension of the CH-47F rebuild program. The CH-47F will sustain the aging CH-47D fleet and bridge the gap until the development of a follow-on aircraft.

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: Ballistic Protection, Blade Fold Kits, SKOs [MOD 15] 0-00-00-0000

MODELS OF SYSTEM AFFECTED: CH-47D CHINOOK, MH-47E

DESCRIPTION/JUSTIFICATION:

The request for FY 2005 has been adjusted to reflect the Fiscal Year 2005 Budget Amendment for Army Aviation Transformation. Type of Improvements - Improved Operational and Safety Capability. Ballistic Protection System (BPS). This funding provides a mission flexible Ballistic Protection System (BPS) to protect crews, passengers, cargo and critical aircraft components from small arms damage. This survivability system was designed and implemented under contract through U.S. Special Forces for the 160th SOAR. In the CH-47D/F the system is modularly designed to fly with 100 percent of troop seat configurations, crew and troop areas, or crew area only. Full weight is about 2500 pounds. Few aircraft modifications are required to apply the BPS. The majority of this effort will involve adapter/mounting brackets which are bolted into place to mount the plates. This modification will be performed by unit level maintenance personnel. Once the aircraft is modified for BPS, two soldiers can install the BPS in approximately 90 minutes. Blade Fold Kits. This funding purchases existing blade folding racks for both CH-47D and CH-47F aircraft. Currently aircraft have no means to quickly fold the blades during shipboard operations. Sets, Kits and Outfits. This funding procures initial start-up tooling and equipment to facilitate unit reorganizations as part of the Army Aviation Transformation.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

Description:

The CH-47F will be a modification to the current CH-47D helicopter to extend airframe service life, introduce an open electronic architecture that is compatible with the Army XXI digitized battlefield, and reduce Operating and Support (O&S) cost. This heavy lift helicopter program will be based on a remanufacture approach. The airframe will be rebuilt, mission capability improved, and vibrations reduced through airframe stiffening to provide for long term O&S cost reductions. Continued support, coverage, and sustainment of Maneuver, Fire Support, Air Defense, and Survivability mission areas will be provided by the CH-47F. Its mission is transportation of ground forces, class III/class V supplies, and battle critical cargo in support of all future contingencies.

A service life extension program, the CH-47F will sustain the aging CH-47D fleet and bridge the gap until the development of a follow-on aircraft. It will be fielded as a direct replacement for 287 of the CH-47D fleet to Fs and 50 Special Operations Aircraft to Gs. This system supports the Current Force-to-Future Force transition path of the Transformation Campaign Plan (TCP).

Justification:

FY 05 funding procures Advanced Procurement to support deliveries of avionics and airframe components. Long Lead is required to provide funding for those parts, tooling, test equipment, and materiel which are lead time critical to the end item modification. Long lead funding is required to preserve the planned helicopter delivery schedule.

Description:

This modification updates and modernizes the C-12, RC-12, UC-35, C-23, and C-26 fixed wing aircraft communication, navigation, surveillance and Department of Defense (DoD) mandated safety equipment to current and evolving international standards. Furthermore, any spares and test equipment necessary to support the modification will be procured. In addition, it provides for the procurement and installation of military unique equipment such as Joint Precision Aircraft Landing System (JPALS). These modifications ensure continued worldwide deployment capability, and safe operations into the 21st Century. These systems supports the Current to Future transition path of the Transformation Campaign Plan (TCP).

Justification:

FY 05 procures communications, navigation, and surveillance equipment that supports future Air Traffic Management requirements. In addition, equipment included in the modifications will enhance the safety of passengers and crew. The upgrade will also permit the Army fixed wing aircraft to operate in compliance with other existing and emerging regulations. As requirements for new avionics equipment continue, aircraft delays and airspace exclusion are likely for aircraft not properly equipped. Upgrade of obsolete communication and navigation systems will enhance reliability and maintainability by employing commercial systems thereby improving aircraft availability for mission requirements.

Date: March 2004

MODIFICATION TITLE: Avionics System Cockpit Upgrade [MOD 1] 1-96-01-0612

MODELS OF SYSTEM AFFECTED: C-12F3, D1, D2, T, J, R, U; RC-12K, N, P, Q, D, H; C-26; UC-35A, B; C-23C

DESCRIPTION/JUSTIFICATION:

This effort will modernize 5 types of Fixed Wing aircraft communications, navigation, surveillance, and safety equipment to current international requirements, enhance fleet standardization, allow worldwide deployments and continued safe operations into the 21st Century. As currently equipped, the aircraft will not be suitable for worldwide deployment nor capable of using modern navigation and air traffic control facilities. The following equipment is included in this upgrade: Flight Management System, Displays, Terrain Awareness Warning System, 8.33kHz radios, APX 119 Mode S upgrade, Satellite Communications (SATCOM), Traffic Alert Collision Avoidance System II, Flight Data Recorder, Cockpit Voice Recorder, High Frequency Radios, Weather Radars, Data Link Capability, and Communications Management Unit. The preceding components reflect critically needed items. However, Air Traffic Management and DOD Navigation Warfare requirements are evolving and will require additional systems in the near future. The kit quantities reflected on the next page represent a wide variety of avionics kits with different mixes each fiscal year. Additionally, kit configurations vary based on the aircraft that they will be installed on. Consequently, kit and installation unit cost will vary significantly from year to year.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

Development is not required for Avionics System Cockpit Upgrade.

Description:

The OH-58A&C model helicopters are low silhouette, single rotor helicopters powered by a single gas turbine engine (T63-A-720) used for observation, scout (no weapons), and command and control. This is a single pilot aircraft with provisions for a second pilot and the capability to carry two passengers or cargo in the rear cargo area. The OH-58C is an upgraded OH-58A model with a more powerful transmission, navigational upgrades and state of the art instrumentation. This aircraft serves as the bridge for aviator training and pilot proficiency until modernized aircraft are fielded. The program provides for integration of the Single Channel Ground & Airborne Radio System (SINCGARS), which will provide improved VHF FM airborne communications and is required to safely achieve compatibility with other equipment with which affected equipment will be operated.

This system supports the Current transition path of the Transformation Campaign Plan (TCP).

Description:

This modification updates and modernizes the C-20F, C-20E and C-37 fixed wing aircraft communications, and navigation equipment, enhancing the aircraft's capability for worldwide deployments. Furthermore, the C-20 and C-37 aircraft will receive additional operational capability with the installation of Joint Precision Landing Systems (JPALS) and Joint Tactical Radio Systems (JTRS). These aircraft support the Army's executive flight detachment at the three star and above level. This system supports the Current to Future transition path of the Transformation Campaign Plan (TCP).

Justification:

FY 05 procures new C-20/C-37 Communication, Navigation, and Surveillance equipment needed to support the crew in meeting the demands of the future air navigation system. Funds will be used to meet evolving avionics requirements resulting from worldwide navigation transition to Global Positioning System (GPS) enroute and approach systems, and Chairman of the Joint Chief of Staff Master Navigation Plan requirements.

Description:

The Longbow Weapon System (AH-64D) consists of a modified AH-64 airframe, a Fire Control Radar (FCR)/ Radar Frequency Interferometer (RFI) mission kit, and a fire and forget Longbow HELLFIRE missile. The 18 October 95 Acquisition Decision Memorandum authorized Longbow Apache to proceed into production and award of single year contract not to exceed quantity of 18 aircraft in FY96. A Multi-Year II Contract (FY01-FY05) was signed on 29 September 2000. Airframe quantities and funding reflect the multi-year (MY) scenario. Multiyear contracts for the FCR mission kit were signed in Nov 97. Quantities and funding reflect this multiyear scenario. 501 AH-64A Apaches will be remanufactured to the AH-64D configuration with 227 Longbows being equipped with the FCR/RFI mission kits and 701C engines. Two hundred twenty-seven AH-64Ds will incorporate the General Electric T700-GE-701C engines for improved performance when carrying the FCR mission kits. Those AH-64D aircraft fielded without the FCR/RFI mission kits will have the T700-GE-701 engines, but can accept the FCR/RFI mission kit with the addition of T700-GE-701C engines. The Longbow Weapon System will provide the AH-64 with automatic target detection, classification, prioritization and a true fire-and-forget engagement capability, greatly increasing weapon system effectiveness and aircraft survivability. The weapon system will be employable day or night, in adverse weather and in obscurants. The weapon system will effectively engage and destroy advanced threat armor on the AirLand Battlefield of the 21st century. To be effective and survive on this future battlefield, the attack helicopter team will rapidly engage multiple targets with minimum exposure time, and deploy a system that is inherently resistant to threat countermeasures (CMs). Funding provides for the procurement of 501 Modernized Target Acquisition Designation Sight/Pilot Night Vision Sensor (M-TADS/PNVS) for the Longbow fleet. Provides funding, starting in FY05, for the initiation of non-recurring engineering (NRE) for Longbow Open System Architecture upgrades. This system supports the Current to Future transition path of the Transformation Campaign Plan (TCP).

Justification:

FY05 procures 19 aircraft, including associated support equipment, tooling, government furnished equipment (GFE), training devices, reman/retrofit of reliability/safety fixes, focused component recap on Longbow aircraft, M-TADS/PNVS (including TADS Electronic Display and Control (TEDAC) assemblies), begins funding NRE for Longbow Open System Architecture improvements, and Improved Helmet Display Sight System (IHDS). Funds continued FCR production integration, fielding sustainment, obsolescence resolution.

Description:

The Longbow Heavy Attack Helicopter (AH-64D) consists of a modified AH-64 airframe, a Fire Control Radar (FCR)/ Radar Frequency Interferometer (RFI) mission kit, fire and forget Longbow HELLFIRE missiles, semi-active laser guided missiles, 70MM rockets, and a 30MM chain gun. These changes consist of increased electrical power management system, enhanced navigation and communication systems and MANPRINT Crew station. The AH-64A airframe is remanufactured to integrate the FCR/RFI mission kit and share the data within the tactical internet. AH-64Ds will incorporate the General Electric T700-GE-701C engines for improved performance when carrying the FCR/RFI mission kit. Those AH-64D aircraft fielded without the FCR mission kits will have the T700-GE-701 engines, but can accept the FCR mission kit with the addition of T700-GE-701C engines. The Longbow Weapon System will provide the AH-64 with automatic target detection, classification, prioritization and a true fire-and-forget engagement capability, greatly increasing weapon system effectiveness and aircraft survivability. The weapon system will be employable day or night, in adverse weather and in obscurants. The weapon system will effectively engage and destroy advanced threat armor on the Air Land Battlefield of the 21st century. To be effective and survive on this future battlefield, the attack helicopter team will rapidly engage multiple targets with minimum exposure time, and deploy a system that is inherently resistant to threat countermeasures. Funding provides for the procurement of 501 Modernized Target Acquisition Designation Sight/Pilot Night Vision Sensor (M-TADS/PNVS) for the Longbow aircraft fleet. Provides funding, starting in FY05, for the initiation of nonrecurring engineering for Longbow Open System Architecture upgrades. This system supports the Current to Future transition path of the Transformation Campaign Plan (TCP).

Justification:

The request for FY 2005 has been adjusted to reflect the Fiscal Year 2005 Budget Amendment for Army Aviation Transformation. FY05 procures 19 aircraft, including associated support equipment, tooling, government furnished equipment (GFE), training devices, reman/retrofit reliability and safety fixes, focused component recap on Longbow aircraft, M-TADS/PNVS (including TADS Electronic Display and Control (TEDAC) assemblies, Improved Helmet Display Sight System (IHDSS), and initiation of nonrecurring engineering for Longbow Open System Architecture upgrades. A total of 501 AH-64A Apaches will be remanufactured to the AH-64D configuration.

MODIFICATION TITLE: Longbow Apache Mods [MOD 1] NA

MODELS OF SYSTEM AFFECTED: Longbow Apache

DESCRIPTION/JUSTIFICATION:

The Longbow Weapon System (AH-64D) consists of a modified AH-64A airframe, a Fire Control Radar (FCR)/Radar Frequency Interferometer (RFI) mission kit and a fire and forget Longbow Hellfire missile. The AH-64 aircraft will be modified with those changes necessary to effectively and efficiently integrate the FCR/RFI mission kit. These changes consist of increased electrical power, expanded forward avionics bays, increased cooling, upgraded processors, MANPRINT crew station and 701C engines. These upgrades will significantly enhance warfighting capability and battlefield survivability by providing for advanced digitized avionics and the employment of true fire and forget engagement capability. Provides funding for Modernized Target Aquisition Designation Sight/Pilot Night Vision Sensor(M-TADS/PNVS) on 501 aircraft starting in FY03. Procures reman/retrofit reliability and safety fixes, and focused component recap on Longbow aircraft. Procures 27 Longbow Crew Trainers (LCTs), one Longbow Collective Training System (LCTS), maintenance trainers, Parts Task Trainers (PTT), and Tactical Engagement Simulation System (TESS). Funding provides for the procurement of Internal Auxiliary Fuel Systems, and Longbow Open System Architecture upgrades.

Description:

The Longbow Weapon System (AH-64D) consists of a modified AH-64 airframe, 227 Fire Control Radar (FCR)/ Radar Frequency Interferometer mission kits and a fire and forget Longbow HELLFIRE missile. Two hundred twenty-seven AH-64Ds will incorporate the General Electric T700-GE-701C engines for improved performance when carrying the FCR/RFI mission kit. Those AH-64D aircraft fielded without the FCR/RFI mission kit will have the T700-GE-701 engines installed, but can accept the FCR/RFI mission kit with the addition of T700-GE-701C engines. The Longbow Weapon System will provide the AH-64 with automatic target detection, classification, prioritization and a true fire-and-forget engagement capability, greatly increasing weapon system effectiveness and aircraft survivability. The weapon system will be employable day or night, in adverse weather and in obscuration. The Longbow weapon system, as part of the future force, will effectively engage and destroy advanced threat armor on the battlefields of the 21st century. To be effective and survive on the current and the future battlefield, the attack helicopter team will rapidly engage multiple targets with minimum exposure time, and deploy a system that is inherently resistant to threat countermeasures (CMs). This system supports the Current to Future transition path of the Transformation Campaign Plan (TCP)

Justification:

FY 05 funds continued FCR/RFI mission kit production integration on the Longbow remanufacture line, post production fielding sustainment, obsolescence resolution. The FCR/RFI mission kit quantities and funding reflects multiyear procurements for FY 98-02. 501 AH-64A Apaches will be remanufactured to the AH-64D configuration with 227 Longbow aircraft being equipped with the FCR/RFI mission kits and 701C engines.

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: Apache Longbow FCR [MOD 1] NA

MODELS OF SYSTEM AFFECTED: Longbow Apache

DESCRIPTION/JUSTIFICATION:

Longbow Fire Control Radar (FCR) is a millimeter wave target acquisition system developed for integration on the Apache. FCR provides three tactical modes of operation. Ground Targeting Mode (GTM), Air Targeting Mode (ATM), and Terrain Profile Mode (TPM). In GTM, the FCR provides the capability to rapidly scan up to approximately 50 square kilometers of the battlefield using selectable scan widths which are directionally controllable by the crew. In this mode, the FCR detects, locates, classifies, and prioritizes moving and stationary targets. Targets are classified as air defense units, track vehicles, wheel vehicles, helicopters, fixed wing aircraft, or unknown. It has the capability to detect stationary targets out to a range of six kilometers and moving targets out to eight kilometers. In the ATM, the FCR detects, classifies and prioritizes airborne targets. TPM provides terrain avoidance information to the crew for navigation during periods of reduced visibility. FCR does all the above day or night and during periods of reduced visibility caused by atmospheric conditions and/or battlefield obscuration. Procures a total of 227 FCR/RFI mission kits. FY05 funds are required to continue FCR/RFI mission kit continued integration into the Longbow remanufacture line, post production fielding sustainment, obsolescence resolution.

Description:

The Longbow program encompasses modification to 501 AH-64A Apaches as well as upgrades to the aircraft systems for the AH-64D series to efficiently and effectively integrate the Fire Control Radar (FCR)/ Radar Frequency Interferometer (RFI) mission kits, and the Longbow HELLFIRE missile. Longbow provides an adverse weather fire-and-forget missile capability that increases lethality and survivability. The Longbow Apache also retains the capability to fire the Semi-Active Laser Hellfire. The design enhancements increases operational capability of the crew and provides increased survivability and lethality. This system supports the Current to Future transition path of the Transformation Campaign Plan (TCP)

Description:

The request for FY 2005 has been adjusted to reflect the Fiscal Year 2005 Budget Amendment for Army Aviation Transformation.

The UH-60 BLACKHAWK helicopter is the Army's utility helicopter in the future force.

Justification:

FY05 funding initiates the UH-60M RECAP/UPGRADE program and continues modification of the UH-60A/L fleet with safety, cost reduction, and operational improvements.

Description:

The UH-60 BLACK HAWK will serve as the Army's utility helicopter in the future force. It is a twin engine, single rotor, four bladed utility helicopter used for air assault, air cavalry, troop & equipment transport, command & control, and medical evacuation (MEDEVAC) in active and reserve component theater, corps, division, and Table of Distribution and Allowances (TDA) units. The UH-60 is joint force capable, provides 24 hour/day support including operations at night and in adverse weather conditions. The UH-60 is designed to carry a crew of four plus eleven combat equipped troops or an external load up to 9,000 pounds. The UH-60 BLACK HAWK fleet consists of the UH-60A, first fielded in FY78, and the newer UH-60L which was fielded in FY89 and is still in production today. The oldest UH-60As are now over 25 years old, and the average age of the UH-60A fleet is 21 years. This system supports the Current-to-Future transition path of the Transformation Campaign Plan (TCP).

Justification:

The request for FY 2005 has been adjusted to reflect the Fiscal Year 2005 Budget Amendment for Army Aviation Transformation.

FY05 funding initiates the UH-60M RECAP/UPGRADE program, continues procurement and installation of the Crashworthy External Fuel System (CEFS), continues procurement of MEDEVAC mission kits for new production UH-60L aircraft, completes the qualification of the Advanced Helicopter Transmission Lubricant (AHTL) which will lower Operations & Support (O&S) costs by reducing unscheduled maintenance and procures Brigade/Mission Kits. The UH-60M RECAP/UPGRADE program addresses current UH-60 fleet aging problems such as decreasing Operational Readiness (OR) and increasing O&S costs, including all top-ten cost drivers, and provides a common, modernized platform for the UH-60 Utility and HH-60M MEDEVAC fleet of the future. The MEDEVAC kit upgrades UH-60L models to an air ambulance configuration providing en-route patient treatment which is critical to patient survival. CEFS is a safety modification that reduces the risk of a post-crash fire. The Brigade/Mission kits provide adapter hoist kits, winterization kits, blackout kits and set, kits, outfit modularity sets that will improve capability of maintenance brigades/units.

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: Crashworthy External Fuel System (CEFS) [MOD 1]

MODELS OF SYSTEM AFFECTED: UH-60A/L/Q

DESCRIPTION/JUSTIFICATION:

The Crashworthy External Fuel System (CEFS) is a safety modification that reduces the risk of a post-crash fire. The existing external fuel tanks were designed for self-deployment missions and do not meet current battlefield doctrine that requires these helicopters to fly long-range missions into hostile environments. CEFS is critical to the safety and survivability of UH-60 helicopters. The Army Aviation Safety Center assessed the risk associated with continued routine flight operations using the current non-crashworthy tanks as high.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

Development is complete.

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: HH-60L Medical Equip Package (MEP) [MOD 2]

MODELS OF SYSTEM AFFECTED: UH-60L

DESCRIPTION/JUSTIFICATION:

Modifies UH-60L helicopters to the HH-60L MEDEVAC configuration. The modification kit is called the Medical Equipment Package (MEP) which consists of FLIR II, external high performance rescue hoist (HPH), personal locating system (PLS), environmental control system (ECS), improved digital avionics package and advanced medical interior. The MEP will be installed on new production UH-60L aircraft as the aircraft goes through the production line, therefore installation costs are not shown separately on the following page nor is the installation schedule below completed.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

The HH-60L Medical Equipment Package (MEP) is approved for production. The Army continues to address obsolescence issues on some components; additional evaluation/testing is on-going/scheduled on these components.

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: UH-60M/HH-60M RECAP/UPGRADE [MOD 4]

MODELS OF SYSTEM AFFECTED: UH-60A/L

DESCRIPTION/JUSTIFICATION:

The UH-60M BLACK HAWK will serve as the Army's utility helicopter in the Future Force. Many helicopters in the UH-60 fleet have exceeded the aircraft's designed 20 year service life. The oldest UH-60A models in the fleet were fielded over 25 years ago, and the average age of the UH-60A fleet is 21 years old. The increased operational tempo, coupled with the technological age of the basic airframe, components, and systems, is having an adverse impact on the operational readiness (OR) and operational and support (O&S) costs of the over 1500 aircraft fleet. The current UH-60A/L fleet lacks the necessary digital avionics architecture to meet current and future Army and Joint Service interoperability communication requirements. The Army has determined that a recapitalization/upgrade program is required to address these issues. Transformation of the current UH-60 fleet will be accomplished using an evolutionary, block modification approach. The program will upgrade the UH-60A/L fleet to the UH-60M configuration. The upgrade includes service life extension, structural improvements, upgrade of the propulsion system (UH-60A T700-GE-700 engine and drivetrain to the UH-60L T700-GE-701D engine & drivetrain), and a digital cockpit. The upgrades will meet lift, range, survivability, and interoperability requirements while addressing all top ten O&S cost drivers and extending the useful life of these aircraft another 20 years. The UH-60M provides a common platform for the modernized air ambulance MEDEVAC Mission Equipment Package (MEP). The designation for the MEDEVAC UH-60M is HH-60M. This system supports the Current-to-Future transition path of the Transformation Campaign Plan.

MODIFICATION TITLE: Brigade Sets [MOD 6]

MODELS OF SYSTEM AFFECTED: UH-60A/L

DESCRIPTION/JUSTIFICATION:

This request for FY 2005 has been adjusted to reflect the Fiscal Year 2005 Budget Amendment for Army Aviation Transformation.

Provides funding to procure mission kits for fielded UH-60 aircraft and Army modularity sets to support the new Aviation Division and Brigade Structure. Included are Ballistic Protection Systems (BPS) mission kits that provides increased protection from small arms significantly improving the safety of the pilot, co-pilot, and cargo area/transported troops. BPS is a fully qualified kit and is compatible with UH-60A MEDEVAC mission kit and troop seats. Also includes Brigade SKO/Mission Modularity Kits that may include adapter hoist kits, winterization kits, blackout kits and modularity kits comprised of a variety of sets, kits and outfits that provide improved capability to fielded maintenance units/brigades. The exact configuration of each set may vary depending on the location and/or unit's mission. Installation will be accomplished by field units.

Description:

The UH-60 BLACKHAWK will serve as the Army's utility helicopter in the future force. It is a twin engine, single rotor, four bladed utility helicopter used for air assault, air cavalry, troop & equipment transport, command & control, and medical evacuation (MEDEVAC) in active and reserve component theater, corps, division, and Table of Distribution and Allowances (TDA) units. The UH-60 is joint force capable, provides 24 hour/day support including operations at night and in adverse weather conditions. The UH-60 is designed to carry a crew of four plus eleven combat equipped troops or an external load up to 9,000 pounds. The UH-60A entered service in fiscal year 1978 (FY78), and the newer model UH-60L in FY89. The Army continues to procure UH-60L helicopters today. The oldest UH-60As are now over 25 years old, and the average age of the UH-60A fleet is 21 years. This system supports the Current-to-Future transition path of the Transformation Campaign Plan (TCP).

Justification:

FY05-09 Advanced Procurement funding procures long leadtime avionics, airframe and transmission components required to meet the planned delivery schedule for the UH-60M RECAP/Upgrade program.

Description:

The OH-58D Kiowa Warrior is a two-seat, single-engine, observation, scout/attack helicopter with four main rotor blades. It utilizes a thermal-imaging system and a laser rangefinder/designator in a mast-mounted sight situated above the main rotor system. The aircraft is equipped with a variety of weapon systems including: Hellfire, Air-to-Air Stinger (ATAS), 2.75-inch rockets, and a .50-caliber machine gun. The aircraft operates autonomously at standoff ranges providing armed reconnaissance, command and control, and target acquisition/designation for Apache helicopters and other airborne weapons platforms in day, night, and adverse-weather conditions. The Active Army, the Army Reserves, and the National Guard all fly Kiowa Warrior missions.

The Army's transition to the digitized battlefield requires that the OH-58D incorporate both safety and operational compatibility modifications. An ongoing Safety Enhancement Program (SEP) incorporates upgraded engines and engine barrier filters, crashworthy crew seats, cockpit airbags, enhanced digitization capabilities, and improved weapons interface. The SEP reduces pilot workload during emergency maneuvers and significantly improves the crashworthiness of the aircraft thus enhancing crew survivability. SEP improves engine reliability, reducing the probability of engine failure and exposure to emergency autorotations and protects engines from corrosion from sand/dust. SEP enables both the inclusion and expansion of critical digitization capabilities which will improve system reliability and maintainability and will provide an enhanced message completion rate for digital messages and situational awareness over the Tactical Internet. Partial SEP improvements had previously been incorporated into the later lots of Bell Helicopter's Kiowa Warrior remanufacture/retrofit modification lines; those aircraft will receive missing portions of the SEP modifications through field retrofit activities. Other fielded Kiowa Warrior aircraft are being SEP modified via a combination of efforts on the contractor's SEP modification line and through field retrofit.

The SEP Weight Reduction initiative will improve operational and autorotational characteristics as well as increase system reliability and lower support costs. The goal is to reduce aircraft operational gross weight by 300-400 pounds. Multiple, related initiatives have been identified to attain the weight reduction. Efforts include removing obsolete and extraneous hardware, removing excess layers of paint, replacing the AN/ALQ-144 Infrared Jammer with an infrared exhaust diffuser, replacing the current bomb rack, updating the multifunction displays (MFD) with lightweight MFDs, and adding the GAU-19 .50-caliber, three-barrel Gatling Gun in lieu of the M2 .

P-1 Item Nomenclature

KIOWA WARRIOR (AZ2200)

Program Elements for Code B Items:

Code:

Other Related Program Elements:

-caliber machine gun. The initiation of procurement activities for Weight Reduction have been accelerated due to Congressional action.

FY 2004 funds include a \$4.2 million congressional increase for the GAU-19 Gun, accelerating its qualification and initial acquisition; and a \$2 million increase for a helmet-mounted optical display.

This system supports both the Current and Future Force transition paths of the Transformation Campaign Plan (TCP). One Kiowa Warrior unit will support the SBCT.

Justification:

The request for FY 2005 has been adjusted to reflect the Fiscal Year 2005 Budget Amendment for Army Aviation Transformation. FY05 procures additional/continuing modification efforts which allow the Kiowa Warrior to safely serve as the Army's night, armed-reconnaissance, aviation capability until Comanche fielding begins and to complement the Comanche aircraft until displaced in approximately 2016/17.

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: Safety Enhancement Program (SEP) [MOD 1] 2-97-01-0115

MODELS OF SYSTEM AFFECTED: OH-58D Kiowa Warrior

DESCRIPTION/JUSTIFICATION:

The Safety Enhancement Program (SEP) addresses safety issues and enables Kiowa Warrior performance as a digitized platform capable of integrated combat engagement via the Tactical Internet. R3 Engines with Full Authority Digital Electronic Control increase reliability, control responsiveness, and overcome a rotor droop anomaly by providing faster response time to power demands. Engine barrier filters improve engine reliability by reducing damage from sand/dust ingestion and by increasing engine meantime between overhaul. The Improved Master Controller Processor Unit (IMCPU) increases memory and throughput and reduces both aircraft empty weight and Operating and Support (O&S) costs. The IMCPU accommodates upgraded software required for digital communications and provides the Variable Message Format (VMF). Energy attenuating seats provide crew safety in case of vertical and horizontal impacts. Cockpit airbags increase crew protection. Of the current fleet of 368 Kiowa Warriors, 304 (including nine Category B trainers) will receive SEP modifications; 227 will be accomplished on the contractor's modification line and 77 additional aircraft had been partially equipped in prior remanufacture/retrofit lines. Thirteen of those aircraft have been lost to attrition. Equipment not installed at the contractor's facility will be applied via field retrofit. In order to complete the SEP, aircraft will be modified at the contractor's facility and some will have seats, airbags, and engine barrier filters installed in the field. The full fleet of 368 aircraft will be equipped with engine barrier filters, seats, and airbags.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

Note: Installation Schedule data not provided below. Majority of aircraft will be block-modified at the Bell Helicopter Textron, Inc. facility via annual contractual orders to modify aircraft to be delivered over a 12-month period. Some but not all aircraft will receive the complete complement of modifications at that facility. Some aircraft will receive portions of the modification efforts via field retrofit and; similarly, not all field retrofit aircraft will receive all field retrofit modifications. Hardware installation dollars on Page 2 of this form represent a compilation of the variety of field retrofit modifications. The block-modification installations on the contractor's modification line are not separately priced and therefore the dollars are embedded in the Recurring line for each year.

Description:

The Airborne Avionics budget line includes the Global Positioning System (GPS), the Improved Data Modem (IDM), the Aviation Mission Planning System (AMPS), the Joint Precision Approach and Landing System (JPALS) and the Joint Tactical Radio System (JTRS). The GPS, IDM, AMPS, and JTRS are four of the aviation systems required to support the digitization of the battlefield.

The GPS provides Army aviation with extremely accurate and secure navigation and timing, assists in situational awareness, and aids in prevention of fratricide. GPS is installed in two configurations based upon mission profile, operational requirements, and avionics architecture of the aircraft. The Doppler GPS Navigation System (DGNS)/AN/ASN-128B is used for the utility and cargo helicopters. The Embedded GPS Inertial Navigation System (EGI) is integrated into the Attack and Special Operations fleets of helicopters. A Pre-Planned Product Improvement to the DGNS and EGI began in FY01 to integrate a Selective Availability Anti-Spoofing Module (SAASM), and Instrument Flight Rule (IFR) navigation capability.

The IDM is the key to digitizing Army Aviation. It is the centerpiece of Aviation's connectivity with the Tactical Internet (TI) and Fire Support (FS) Internet. This hardware/software solution allows Army Aviation interoperability with other weapon and ground systems. The IDM provides a common Aviation platform solution for processing Situational Awareness and Joint Variable Message Format messages. IDM will be installed on the AH-64D, OH-58D, CH-47F, Special Operations Aircraft (SOA), UH/HH-60M, and Tactical Airspace Integration Systems (TAIS).

AMPS is a mission planning/battle-synchronization tool that automates aviation mission planning tasks that include tactical command and control, mission planning, and flight planning. It interfaces with the Maneuver Control System (MCS) and associated networks which will furnish the aviation commander with continuous situational awareness, allowing the commander to rapidly adjust mission plans. This system generates mission data in either hard copy or electronic formats which are loaded onto the aircraft platforms, initializing the communication, navigation, and situational awareness systems on the modernized fleet aircraft, including the AH-64A Apache Modernization, AH-64D Longbow Apache, CH-47D/F Chinook, OH-58D Kiowa Warrior, RAH-66 Comanche, and UH-60A/L/M/Q and HH-60L/M Blackhawk. To support the required future capabilities of the Aviation fleet in the Future Force, AMPS will migrate to the Joint Mission Planning System (JMPS) in FY05. JMPS is a congressionally directed Multi-Service system.

Migration to JMPS is being accomplished in two phases: support of near term Army Aviation fleet requirements and risk reduction by developing platform-specific modules for the Army variant of Portable Flight Planning Software (PFPS), and modification of those modules and development of additional capabilities under the JMPS architecture. The architecture inherent in JMPS will accommodate modifications required to support the Future Combat System and associated family of Unmanned Aerial Vehicles that are to be deployed within Aviation Brigades.

The Joint Precision Approach Landing Systems (JPALS) is a precision approach and landing system providing joint operational capability for U.S. forces assigned to conventional and special operations missions including those operating from fixed base, ship, tactical, and austere environments.

The Joint Tactical Radio System (JTRS) aircraft installation is the transformational system that will provide Army Aviation the required interoperability capability for Future Force and Joint Force operations. The JTRS is a DoD directed replacement for all legacy radio systems. The JTRS provides the foundation for achieving network centric warfare operations across the radio frequency (RF) spectrum providing digital information exchange for situational awareness, both vertically and horizontally, between Joint Warfighting elements, while enabling connectivity to civil and national authorities in support of Homeland Defense. The JTRS will provide an internal capability through an open systems architecture approach in compliance with the Joint Technical Architecture which improves system performance and provides a growth capability for technology insertion at a minimal cost and effort.

All of these systems support the Current to Future transition path of the Transformation Campaign Plan (TCP).

Justification:

FY05 procures GPS (EGI & DGNS) modification kits for field retrofit on the UH-60A/L, CH-47D and Special Operations Aircraft. P3I is required to meet the Chairman of the Joint Chiefs of Staff (CJCS)-directed security requirement (Selective Availability Anti-Spoofing Module (SAASM)) dated 2 January 2001 and to provide a box level IFR navigation capability. GPS P3I, GATM and JPALS programs are closely linked and have joint perspective/participation.

FY05 procures 122 IDM 304 B-Kits for AH-64D, OH-58D, CH-47F, and UH/HH-60M fielding requirements. The IDM improves Army Aviation's interoperability, lethality, and operational tempo through the exchange of fast and accurate data-burst communications, via the TI and FS Internet; providing a seamless capability to communicate across the digital battlefield.

FY05 procures AMPS upgrades for system hardware as well as upgrading the system software to support aviation fleet modernization programs and migration, and required enhancements, to the Joint Mission Planning System (JMPS).

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: Improved Data Modem (IDM) [MOD 1]

MODELS OF SYSTEM AFFECTED: IDM MD-1359/A; Aircraft: Longbow, Kiowa Warrior, Special Operations Aircraft, Chinook, Blackhawk

DESCRIPTION/JUSTIFICATION:

The IDM is the key to digitizing Army Aviation. It is the centerpiece of Aviation's connectivity with the Tactical Internet (TI) and Fire Support (FS) Internet. This hardware/software solution allows Army Aviation interoperability with other weapon and ground systems. The IDM provides a common Aviation platform solution for processing Situational Awareness and Joint Variable Message Format messages. IDM will be installed on the AH-64D, OH-58D, CH-47F, Special Operations Aircraft (SOA), UH/HH-60M, and Tactical Airspace Integration Systems (TAIS).

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

Installation Schedule:

Pr Yr	FY 2003				FY 2004				FY 2005				FY 2006				FY 2007

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: Aviation Mission Planning System (AMPS) [MOD 2] 1-95-01-2185

MODELS OF SYSTEM AFFECTED: Apache (AH-64A Mod./AH-64D), Blackhawk (UH-60A/L/Q and HH-60L), Chinook, Comanche, Kiowa Warrior

DESCRIPTION/JUSTIFICATION:

The AMPS is a mission planning/battle-synchronization tool that automates aviation mission planning tasks. The AMPS includes tactical command and control, mission planning and management. It interfaces with the Maneuver Control System (MCS) and associated networks which will furnish the aviation commander with continuous situational awareness, allowing the commander to rapidly adjust mission plans. This system generates mission data in either hard copy or electronic formats which is loaded on the aircraft platforms, initializing the communication, navigation, and situational awareness systems on the modernized fleet aircraft. Since the airframes have the data receptacles/buses required to interface with AMPS, there is no installation cost/schedule. AMPS is fielded to Aviation Brigade and Battalion Headquarters and Line Company Command Posts. Equipment purchases are on a four year cycle. In the first two years, the computers are replaced. In the second two years computer components are upgraded.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

Operational Requirements Document Change 1 approved Apr 1998. JMPS decision in FY 98. JMPS Combat 1 (JC1) software initial operational capability projected Jul 04.

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: DGNS (AN/ASN-128B) P3I [MOD 4]

MODELS OF SYSTEM AFFECTED:

DESCRIPTION/JUSTIFICATION:

The Doppler GPS Navigation System (DGNS) is one of the aviation systems required for Digitization of the Battlefield. FY 05 starts the fielding of the Pre-Planned Product Improvement (P3I) for the ASN-128B/DGNS for the UH-60A/L and CH-47D aircraft. This modification will provide enhanced security with the CJCS directed Selective Availability Anti-Spoofing Module (SAASM) and GPS Instrument Flight Rule (IFR) navigation capability. The AN/ASN-128B/DGNS P3I will meet the requirements of civil airspace regulatory requirements for the UH-60A/L and CH-47D aircraft.

Description:

Global Air Traffic Management (GATM) is the military equivalent of the International Civil Aviation architecture known as Communications, Navigation Surveillance and Air Traffic Management (CNS/ATM) programs. Current ground based navigation aids will be phased out of service as the world transitions to digital, data (non-voice), and space based navigation systems. Military aircraft will face some level (altitude and location dependent) of flight restrictions if not GATM equipped. GATM requirements cannot be met with a single piece of equipment. Meeting worldwide GATM requirements will entail the upgrading of some existing avionics and the procurement of new systems for the fixed wing fleet. Test equipment and spares necessary to support the modifications will be procured. This system supports the Current to Future transition path of the Transformation Campaign Plan (TCP).

Justification:

FY 05 procures GATM equipment for Fixed Wing aircraft. Fixed Wing aircraft were purchased with current avionics and navigation equipment at the time of production. However, for the Army's Fixed Wing aircraft to remain current and have unrestricted access to the rapidly changing Air Traffic Management airspace, new communication, navigation and surveillance equipment will be needed to support GATM. Unless equipped, the Army's senior leadership will be limited in conducting their worldwide command and control missions because of potential airspace exclusion or routing delays. In addition, elimination of obsolete communication and navigation systems will enhance reliability and maintainability by employing commercial systems thereby improving aircraft availability for mission requirements.

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: Global Air Traffic Management - FW [MOD 1] GATM-FW

MODELS OF SYSTEM AFFECTED: C-12 series; RC-12 series; C-23; C-26; C-37; C-20F,E and UC-35

DESCRIPTION/JUSTIFICATION:

This effort will update and modernize communication, navigation, and surveillance equipment to current international requirements, allow worldwide deployments and continued safe operations into the 21st Century.

As currently equipped, the aircraft are not suitable for worldwide deployment nor capable of using modern navigation and air traffic control capabilities. There is a variety of equipment that will be required by GATM including: datalink technology, satellite communication (SATCOM), communication management units, Electronic Flight Information System, surveillance equipment, radios, navigation equipment and multi-mode receivers. GATM requirements are evolving and will require additional systems in the near future. The kit quantities reflected on the next page represent a wide variety of avionics kits with different mixes each fiscal year. Additionally, kit configuration vary based on the aircraft that they will be installed on. Consequently, kit unit and installation cost will vary significantly from year to year.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

Development is not required for avionics system cockpit upgrades.

Description:

Global Air Traffic Management (GATM) is the military equivalent of the International Civil Aviation architecture known as Communications, Navigation, Surveillance and Air Traffic Management (CNS/ATM) programs. GATM is a DoD term that describes the equipment, training, and procedures mandated by Civilian Air Traffic Control (ATC) authorities in order to operate within 21st century airspace. Current ground based navigation aids will be phased out of service as the world transitions to a modernized air traffic management system. The modernization is designed to meet the current and future service demands posed by aviation growth. The advanced architecture will provide improved safety, accessibility, flexibility, predictability, reliability, capacity, efficiency, and security. Military aircraft will face significant flight restrictions if not GATM equipped. GATM requirements are driven by civil aviation authorities and are not under DoD control. Meeting worldwide GATM requirements will entail the upgrading of some existing avionics and the procurement of new systems for rotary wing fleets. Included in the GATM Program is an upgrade to the Identification Friend or Foe (IFF) Mode 5 capability. This system supports the Current to Future transition path of the Transformation Campaign Plan (TCP).

Justification:

FY05 procures avionics that will allow Rotary Wing aircraft to meet near-term GATM requirements. Europe mandates a Mode-S transponder for Instrument Flight Rules (IFR) flight after Mar 05 and for all flights after Mar 08. Army aircraft will not be allowed to transit through or operate in European airspace affected by these mandates. The Mode-S transponder impacts over 300 European based aircraft as well as those deploying to Europe. The recurring procurement of Mode-S kits started in FY02 and procurement and installations continue. Benefits of GATM include direct routing through civil airspace resulting in significant savings in both time and money. It allows unrestricted operations in worldwide civil controlled airspace and improves safety and operational efficiency while meeting the new worldwide frequency spectrum requirements. GATM provides Army aircraft improved deployment capabilities and allows them to operate in civil airspace without the threat of exclusion. IFF Mode 5 provides enhanced security and greatly improved performance over Mode 4. It maintains compatibility with civil ATC with less interference.

INDIVIDUAL MODIFICATION

Date: March 2004

MODIFICATION TITLE: Global Air Traffic Management - RW [MOD 1] GATM-RW

MODELS OF SYSTEM AFFECTED: CH-47D, UH-60A/L, MH-47D/E, MH-60L/K, A/MH-6, TH-67, AH-64/A/D, OH-58D

DESCRIPTION/JUSTIFICATION:

High priority requirements funding will address enhanced communications and surveillance equipment necessary for airspace access for rotary wing aircraft operations (peacetime and wartime missions) in worldwide. Funding will procure and install Mode-S transponders for all rotary wing aircraft and Mode 5 upgrades for all except TH-67.

DEVELOPMENT STATUS/MAJOR DEVELOPMENT MILESTONES:

NOTE ON KIT AND INSTALLATION QUANTITIES:

B kit quantity exceeds A kit and installation quantities because B kits are bought for the 501 AH-64D fleet. Field retrofit will be performed on the aircraft. 178 aircraft will be addressed on the production line and will not require A kits nor field installations.

Installation Schedule:

Description:

The Aircraft Survivability Equipment Trainer IV (ASET IV) is mounted on six HMMWVs and is an aviation threat emitter simulation and training system, which enables aircrews of Army Aviation Platforms a full capability to train in recognizing surface-to-air-missiles (SAM) and anti-aircraft artillery (AAA) threats in order to employ the correct aircraft threat avoidance tactics. Eight systems have been produced and are being upgraded to simulate the most current SAM and AAA threats, as well as to locate, identify, and track aircraft at night through the use of night vision cameras. The aircraft training against the ASET IV include the Apache, Chinook, Kiowa Warrior, and Blackhawk platforms, and will include the Comanche when it is fielded. This system supports the Current to Future Force transition path of the Transformation Campaign Plan (TCP).

Justification:

FY05 procures fielding of the redesigned Radio Frequency Surface To Air Missile (RFSAM(2)) upgrade modification kit, first article testing of the production version of the Infrared Surface To Air Missile (IRSAM(2)) upgrade modification kit, and addressing of obsolescence and redesign issues as they arise. The RFSAM(2) upgrade modification kits will be fielded to ASET IV suites at the National Training Center, the Combat Maneuver Training Center, and the Joint Readiness Training Center, as well as at Ft. Hood, Ft. Campbell, and Ft. Bragg. The ASET IV provides Army aviators with the aircraft survivability equipment training capability necessary to maintain the highest operator skill level and to maximize readiness.

Description:

Aircraft Survivability Equipment Radar Countermeasures is a summary rollup for the AN/AVR-2B, Laser Detecting Set and the AN/ALQ-211, Suite of Integrated Radio Frequency Countermeasures (SIRFC). However, all funding between FY03 and FY05 is for the AN/AVR-2A and AN/AVR-2B, Laser Detecting Sets. The nomenclature for the AN/AVR-2A with Engineering Change Proposal referred to in previous P-Form submissions has officially been changed to the AN/AVR-2B(V), Laser Detecting Set, effective 11 July 2003.

The AN/AVR-2B is a passive threat laser warning system that alerts the aircrew that they are being targeted by threat forces allowing the aircrew to engage the target or maneuver to break the targeting. SIRFC identifies and protects U.S. Army and Special Operations Aircraft against multiple radio frequency weapon systems. These systems support the Current to Future Force transition path of the Transformation Campaign Plan (TCP).

Justification:

FY05 procures 35 AN/AVR-2B systems to complete installation on AH-64A/D aircraft in support of the Operational Requirements Document and the aircraft missions. These systems must be procured to increase the survivability of U.S. Army aircrews by detecting and alerting them of impending threats from laser aided weapon systems. SIRFC's FY05 procurement is funded through the Special Operations Command (SOCOM).

Description:

ATIRCM is a program to develop, test, and integrate defensive infrared (IR) countermeasures capabilities into existing, current generation host platforms, which includes the MH-60/MH-47, AH-64D, UH-60 and CH-47F, for more effective protection against a greater number of IR guided missile threats than afforded by currently fielded IR countermeasures. The operational requirements concept for IR countermeasure systems is known as the Suite of Integrated Infrared Countermeasures (SIIRCM). The core element of the SIIRCM concept is the Advanced Threat Infrared Countermeasure (ATIRCM), Common Missile Warning System (CMWS) program. The ATIRCM, a subsystem to a host aircraft, is an integrated ultra-violet (UV) missile warning system and an IR Lamp/Laser Jamming and Improved Countermeasure Dispenser (ICMD). The Special Operations Command (SOCOM) is procuring ATIRCM for the MH-47 and MH-60. The Advanced Infrared Countermeasures Munitions (AIRCMM) is designed to provide more effective protection against IR-guided missile weapon systems than current decoys by better emulating the aircraft's IR signature. The AIRCMM solution consists of three expendable flares: the current M-206, the M-211 and M-212. The CMWS also functions as a stand-alone system with the capability to detect missiles and provide audible and visual warnings to the pilot(s), and when installed with the ICMD, activating expendables to provide a degree of protection. CMWS/ICMD will be procured and installed on the AH-64, UH-60 and CH-47 platforms. An Army Systems Acquisition Review Council (ASARC) resulted in a Milestone C Low Rate Initial Production (LRIP) decision in November 2003, approving entry into LRIP. This system supports the Current-to-Future Force transition path of the Transformation Campaign Plan (TCP).

Justification:

The request for FY 2005 has been adjusted to reflect the Fiscal Year 2005 Budget Amendment for Army Aviation Transformation. FY05 funding procures ATIRCM/CMWS for the Army as well as nonrecurring engineering in support of the ATIRCM/CMWS A-Kit.

REMARKS: FY04/FY05 funding supports procurement of A-kits in support of SOA as well as aircraft integration efforts for the UH-60, CH-47 and AH-64D aircrafts. These funds supports both development and testing of A-kits for all three platforms. The A-kit contractor is yet to be determined at this point. The A-kit or B-kit manufacturer will be awarded the effort.

Training/Data - includes training as well as IETM updates, copying of manuals, and other miscellaneous minor data costs.

Fielding Support includes 1) Initial Support Equipment (ISE) which includes tools handling, storage containers, and 2) transportation and other miscellaneous handling costs.

ATIRCM FY03 LRIP funded with SOCOM MFP 11 funding (May 03).

Description:

This project funds the development of an avionics system required to horizontally and vertically integrate the battlefield. Tasks in this project support research efforts in the engineering and manufacturing development phase of this system. The Army Airborne Command and Control System (A2C2S) is the Army's only airborne C2 acquisition program for a system supporting corps, division and brigade Commanders. The A2C2S enables Commanders from brigade to theatre levels, and their staffs, to traverse the battle space rapidly - maintaining situational awareness of all battlefield systems - and maintaining communications, tactical to CONUS reach back, throughout the decision continuum. The A2C2S routinely operates in linear and non-linear areas of operations, all the time providing information superiority with the common operational picture necessary for an accurate, near real-time perspective and knowledge of the situation to avoid enemy strengths while concentrating friendly assets for decisive and rapid victory. Another objective of the A2C2S program is to be the airborne first-responder for Homeland Security and disaster relief by providing a robust communications platform for emergency response coordinators of air and ground operations. It will support initial and remote scene operations center capabilities, convoy operations, and disaster coordination between state, federal, civilian and military assets. This system is critical to enhance the Battle Command Group's ability to effectively perform combat unit operations and serve as a force multiplier in the Future Force. It provides the capability to access the tactical internet to manipulate, store, manage, and analyze situational awareness information, intelligence data, mission plans, and mission progress data to support the command and control decision making process. The A2C2S will provide situational awareness and command and control by hosting Battle Command applications. In addition to line-of-sight Combat Net Radios, including Single Channel Ground Airborne Radio System (SINGARS), Advanced System Improvement Program (ASIP) and HAVEQUICK II, the A2C2S supports deep operations with non-line-of-sight radios such as High Frequency (HF) and Demand Assigned Multiple Access (DAMA) and Satellite Communications System Satellite Command (SATCOM). In addition, the system has the potential to improve the ability of state, local, and federal agencies to communicate and coordinate in a crisis environment such as hurricanes, forest fires, or terrorist incidents. This system supports the Current Force transition path of the Transformation Campaign Plan (TCP)

Justification:

FY05 procures five (5) A2C2S systems to provide a Joint Airborne Battle Command on the Move capability for the 1st CAV, 3rd ACR, SOAR, and 160th.

Description:

The AN/AVS-6, Aviator's Night Vision Imaging System (ANVIS), supports the Army Transformation objectives by permitting superior tactical mobility of rotary wing aircraft during darkness and low light conditions. AN/AVS-6 is a binocular, helmet-mounted system for Aviation crew members. The AN/AVS-6(V)3 is an enhanced night vision goggle that significantly expands the input dynamic range to support operations in conditions that vary from below "starlight" illumination levels through strong urban lighting situations. The increased capability yields enhanced mission performance and improved safety of flight compared to what is now possible using previous AN/AVS-6 systems. The AN/AVS-6(V)3 enhances survivability, lethality, and tactical mobility for aviation assets of the Current Forces. This system supports the Current to Future path of the Transformation Campaign Plan (TCP).

The AN/AVS-7, Heads-Up Display (HUD) is a system which works in conjunction with the Aviator's Night Vision Imaging System (ANVIS). The HUD collects critical flight information from aircraft sensors/cockpit displays and converts this information into visual imagery overlaid on the scene viewed through the night vision goggles. This system allows continuous heads-up flight by the pilot without looking at the instrument panel. This provides significant operational and safety enhancements to night vision goggle flight. The HUD is being installed on the CH-47D and UH-60 helicopters and supports the Current and Stryker forces. The AN/AVS-7 enhances survivability, lethality, and tactical mobility for aviation assets of the Current Forces. This system supports the Current to Stryker path of the Transformation Campaign Plan (TCP).

Justification:

FY05 procures AN/AVS-6(V)3 systems for fielding to USAEUR, 2ACR, 3ACR, Army Reserves and National Guard Units.

Description:

Program provides for Aviation Ground Support Equipment such as test sets, calibration kits, ground power units, hydraulic test stands, and tool shop sets. These systems support the Current to Future transition path of the Transformation Campaign Plan (TCP).

Description:

Aviation Ground Support Equipment (AGSE) is transitioning away from the role of Sustainment to one of Total Life Cycle Management. AGSE will develop, acquire, field, and sustain aviation equipment within cost, schedule, and performance parameters, allowing the Joint Warfighter to carry out peacetime and wartime missions. Systems managed by AGSE through its Life Cycle include Aviation Logistic Automation Program (ALAP), Aviation Vibration Analyzer (AVA), AVA II, Aviation Intermediate Maintenance (AVIM) Shop Sets, Battle Damage Assessment and Repair (BDAR) System, Aircraft Cleaning and Deicing System (ACDS), Aviation Ground Power Unit (AGPU), Shop Equipment Contact Maintenance (SECM), Unit Maintenance Aerial Recovery Kit (UMARK), Digital Aircraft Weight Scales (DAWS), Generic Aircraft Nitrogen Generator (GANG), Centralized Aviation Flight Record System (CAFRS) and Common Aviation Maintenance Management System (CAMMS). These products provide the finest materiel and support solutions to Army Aviation. These systems support the Current to Future transition path of the Transformation Campaign Plan (TCP).

Justification:

The request for FY 2005 has been adjusted to reflect the Fiscal Year 2005 Budget Amendment for Army Aviation Transformation. FY05 procures ground support equipment which will support and sustain the operational readiness of all Army aviation field units which are operating AH-64, UH-60, CH-47, OH-58D and other Army aircraft. Aviation Ground Support Equipment (AGSE) also provides a means to correct safety-of-flight discrepancies which endanger both life and property. The Battle Damage Assessment Repair (BDAR) system will provide aviation maintenance organizations an expeditious means for combat damage assessment, deferment, and/or rapid repair for all Army helicopters. AVIM Shop Set complexes provide a transportable aviation intermediate and limited depot level maintenance capability in force projection or contingency operations. International Standardized Organization (ISO), one-sided expandable shelters, contain AVIM Shop Set tool loads and provide the capability of maritime shipboard movement through commercial ports. These ISO containers are compatible with military/commercial roll-on/roll-off ships and military/commercial ground transportation. The Aviation Vibration Analyzer (AVA) system will provide off-aircraft capability to track and smooth rotor systems thereby reducing the associated damage to airframe and components caused by excessive vibration. AVA enhancement will increase capabilities and incorporate industry standard automation features which impact aviation safety, increase readiness, and reduce operations and maintenance (O&M) costs. The Aircraft Cleaning and Deicing System (ACDS) will dispense and reclaim premixed cleaners, deicers and water through a nozzle and wand assembly at appropriate temperatures and pressures. Aviation Ground Power Units (AGPUs) will be capable of meeting Army helicopter servicing requirements into the next decade. The AGPU Modification kits being procured will meet the significantly increased requirement for 400 hertz (Hz) electrical servicing of the Apache Longbow (AH-64D).

Description:

The programs in Air Warrior provide improved aircrew safety, survivability and human performance that amplify the warfighting effectiveness of the Army Transformation aircraft, including the RAH-66 Comanche, AH-64A/D Apache, UH/HH-60L/M Blackhawk, OH-58D Kiowa Warrior, and CH-47D/F Chinook helicopters and Special Operations Aircraft. These include programs that improve the performance and safety of Army and Joint service aircrews in-flight on wartime and training missions throughout the flight profile, during an aircraft crash sequence and during the post-crash survival period prior to rescue. Air Warrior programs include the HGU-56/P Helmet, the Air Warrior system, Laser Eye Protective devices, and the Cockpit Air Bag System (CABS). Air Warrior provides a system level approach to Aviation Life Support Equipment including the flight helmet, laser eye protection, and survival gear to be used in an escape and evade scenario. The Air Warrior system level approach to Aviation Life Support Equipment also includes microclimate cooling, sound attenuation devices, overwater equipment, night vision devices, extraction capability, chemical and biological protection, and the flight duty uniform. Air Warrior also includes the integration efforts on the RAH-66 Comanche, AH-64A/D Apache, UH/HH-60L/M Blackhawk, OH-58D Kiowa Warrior, and CH-47D/F Chinook helicopters and Special Operations Aircraft. Block 1 Air Warrior ensembles will be procured to integrate aircrew equipment for maximum aircrew effectiveness by providing increased mission performance and safety, reduction of equipment weight and bulk, and increased tailorability to specific missions, threats, and the various aircraft platforms operated. Air Warrior will enable the Army Aviation Warfighter to meet the approved Operational Requirements Document Key Performance Parameter mission length of 5.3 hours, as opposed to the 1.6 hours of mission capability that exists today with aviators in full chemical/biological protective gear. The results of future development efforts will be applied as Block Improvements to the Block 1 Air Warrior system. The CABS is a supplemental restraint system that reduces aviator deaths and injuries caused by body and head flailing against cockpit structures. These systems support the Future Force transition path of the Transformation Campaign Plan (TCP).

Justification:

FY05 procures the Air Warrior basic ensemble, aircraft platform installation and A and B kit production.

Description:

Tactical Air Traffic Control (ATC) equipment includes the Air Traffic Navigation Integration and Coordination System (ATNAVICs), and the Tactical Airspace Integration System (TAIS). The ATNAVICs will provide all weather instrument flight capabilities to include enroute, terminal, and radar precision approach and landing services to all Army, Joint, and allied aircraft. The TAIS is a highly mobile, airspace synchronization and deconfliction system providing Army Airspace Command and Control (A2C2) and air traffic services capabilities at Division/Corps/Echelon Above Corps (EAC). TAIS provides ground commanders with automated A2C2 capability to support all Corp/Division/ EAC digitization initiatives into the next century. The ATNAVICs and TAIS serve as effective risk management tools for aviation safety during night, inclement weather, and combat operations. Fixed Base ATC requirements will be met through a vast array of high technology solutions resulting in highly reliable and safe ATC systems. The Joint DoD/Federal Aviation Administration (FAA) program will modernize the National Airspace System (NAS) to include upgrading and automating the complete infrastructure, systematically replacing antiquated analog systems (radars and communications switching system) with the installation of state of the art digital technology. These new systems include the Voice Communication Switching System (VCSS), the Department of Defense (DoD) Advanced Automation System (DAAS), and the Digital Airport Surveillance Radar (DASR). The Fixed Base Precision Approach Radar (FBPAR) which will be the Army's primary ground controlled precision approach capability to recover aircraft to fixed base facilities, ensuring safe landing in adverse weather conditions. These systems support the Current to Future transition path of the Transformation Campaign Plan (TCP).

Justification:

The request for FY 2005 has been adjusted to reflect the Fiscal Year 2005 Budget Amendment for Army Aviation Transformation. FY 05 procures tactical and fixed base ATC systems. Funds for tactical ATC systems will provide for the production of the TAIS and ATNAVICs. This new family of tactical ATC systems will replace previous generation equipment that is obsolete and not economically supportable and ensures Army ATC and airspace management and command and control systems will be capable of supporting the path ahead to the Future Force. Fixed base ATC systems will provide the Army a joint service capability to procure specific fixed base ATC systems required for the joint DoD FAA modernization and upgrade of the NAS. These systems will save significant Operational and Support costs through the replacement of old, obsolete, and antiquated analog radars, switches, and automation systems with new, state of the art, highly reliable ATC systems in towers and approach control facilities. Equipment quantity and configuration will be tailored to meet specific site requirements, which will result in varying unit costs. Funding will also ensure interoperability between the Army and FAA systems. These new fixed base systems will be relatively easy to maintain and will provide commonality for both operational and maintenance training. Commonality and interoperability will ensure jointness among the Services and participating host nations.

Description:

This program provides funding to the Army Test and Evaluation Command (ATEC), Developmental Test Command (DTC) to establish, modernize, expand or replace Army-owned industrial facilities used in production testing of Aircraft and Aircraft components. It sustains Army production test capabilities through upgrade and replacement of instrumentation and equipment that is technologically and/or economically obsolete. Modernization of test instrumentation and equipment generally provides increased automation and efficiencies, improved data quality and quantity and cost avoidances to Army Program Managers. This project procures airborne instrumentation and support equipment to collect in-flight compatibility, reliability, and safety measurements of Army aircraft. Programmed funding will be used to upgrade or replace production test instrumentation and equipment at the Aviation Technical Test Center, Fort Rucker, AL and, beginning in FY07, Yuma Proving Ground, Yuma, AZ. This project supports all transition paths of the Army Transformation from the Current to the Future Force.

Beginning in FY 2005, this program will fund aviation sustainment level (Depot) tools, tool sets and test equipment for the four Aviation Classification and Repair Activity Depots (AVCRAD). This additional capability will align the AVCRADs function with it's required sustainment capability. The tools, tool sets and test equipment will be used to train soldiers to perform their wartime mission, augment peacetime production and align their capabilities as a National Maintenance Program provider.

Justification:

FY05 procures: Upgraded Local Area Network components and interfaces used in handling large volumes of test data (replacement of obsolete servers, storage systems and other LAN equipment used for helicopter test data processing. LAN upgrades will provide increased reliability and decrease downtime due to equipment failure. Software upgrades will enhance security and provide stable, vendor supported platforms for development activities.); state-of-the-art engineering PC based workstations and tools for engineers to use in test data analysis, presentation, and reporting (workstation systems and engineering analysis software provide access to aviation performance and system test data); on-board instrumentation recorder for monitoring high speed digital avionics busses; various types of airborne instrumentation including analog and inertial sensors, Global Positioning System receivers, signal conditioning units, various types of data acquisition equipment and cockpit display components used to obtain aircraft performance data; and upgrades to computer and network capabilities used to reduce and process aircraft test data. This instrumentation is required to ensure complete and accurate test data is collected and safety and environmental hazards are minimized. The majority of the instrumentation being upgraded or replaced is obsolete and has met or exceeded it's economic life.

INDUSTRIAL FACILITIES (AZ3300)

Program Elements for Code B Items:

Code:

Other Related Program Elements:

Benefits of this project include increased test efficiencies and decreased costs and risks to Army Program Managers.

The FY 2005 AVCRAD program provides selected depot level tools for the four Army Aviation Classification Repair Activity Depots to begin performing selected depot repairs of aircraft and airframe components for the National Maintenance Program. Tools will include various state-of-the-art special tools and test equipment to enable troubleshooting and repair of airborne instrumentation including analog and inertial sensors, Global Positioning System receivers, signal conditioning units, aircraft survivability equipment, avionics, communications, and navigation equipment. Additionally, funds also procure some larger tools used for manufacturing and overhaul of power train; power plant; hydraulic, armament, prop and rotor and engine components.

The request for FY 2005 has been adjusted to reflect the Fiscal Year 2005 Budget Amendment for Army Aviation Transformation.

Description:

The M261 19-tube and M260 7-tube rocket launchers are used to fire 2.75 Inch HYDRA 70 rockets from the following platforms: AH-64 Apache, OH-58D Kiowa Warrior, MH-60L Blackhawk, and AH-6J helicopters. The launchers are non-repairable yet durable enough to withstand as many as 32 rocket firings before being discarded. The empty weight of the M260 launcher is approximately 35 pounds, and the empty weight of the M261 launcher is approximately 82 pounds. The launcher permits fuze-timing selection from the cockpit and will launch rockets using either the MK 40 or the MK 66 motors. The 2.75 Launcher supports the Current Force transition path of the Transformation Campaign Plan (TCP).

Justification:

FY05 procures M260 7-tube rocket launchers for AH-64 Apache, OH-58D Kiowa Warrior, MH-60L Blackhawk, and AH-6J helicopters. Procurement replaces launchers expended as a result of annual rocket firings for training and replenishes the limited issuable stockage that has been depleted below levels acceptable to support training and war reserve requirements of Active Army, Special Operations Forces and Reserve Component usage.

Description:

The AN/ARC-220/VRC-100 High Frequency (HF) Radio Program answers Army Aviation's critical long-standing requirement for a Non-Line of Sight (NLOS) communications capability. The HF radio system allows continuous and reliable secure/non-secure communication between Army aircraft flying Nap-of-the-Earth (NOE) maneuvers and at NLOS distances with Aviation Tactical Operations Centers (TOC) and other Army aircraft. The radio incorporates Automatic Link Establishment (ALE) to eliminate manual searches for workable frequencies reducing pilot workload and enhancing communication connectivity. The AN/ARC-220/VRC-100 also provides a frequency hopping capability and is night vision compatible. The AN/ARC-220/VRC-100 provides a position reporting and data capability enhancing situational awareness and command and control. This system supports the Current transition path of the Transformation Campaign Plan (TCP).

Justification:

FY05 procures 5 AH-64D A-Kits. Supports Required Operation Capability (ROC) for NOE Communications dated 7 May 1980 and updated in approved Operational Requirement Document for the NOE Communications system dated 26 February 1994. The AN/ARC-220/VRC-100 answers Non-Line-of-Sight communication deficiency for the AH-64A/D aircraft as identified by Task Force Hawk. The AN/ARC-220 supports digitization of the battlefield and enhances Joint Services communications. The AN/ARC-220/VRC-100 communications system supports the five (5) Army modernization objectives: protect and sustain the force, protect the force, win the battlefield information war, conduct precision strikes throughout the battlefield and dominate the maneuver battle.
