> Overseas Contingency Operations Surge Supplemental Request

FY2010 Research, Development and Acquisition, Army

Overseas Contingency Operations

Budget Estimate

Introduction

This request addresses additional Overseas Contingency Operation requirements associated with the troop surge to Afghanistan.

As a result of the surge, the Army is requesting additional resources in the following appropriations.

<u>TAB</u>	<u>Appropriation</u>		Additional Request (\$ M)
Α	Aircraft Procurement, Army		182.2
В	Other Procurement, Army		1,997.9
С	Procurement of Ammunition, Army		17.1
D	Procurement of W&TCV, Army		3.0
E	Research, Development, Test &		
	Evaluation, Army		61.9
		Total	2,262.1

Description:

The CH-47 Chinook is a twin-turbine, tandem-rotor, heavy-lift transport helicopter with a useful load of up to 25,000 pounds. As the Army's only heavy lift helicopter, the CH-47F Improved Cargo helicopter is an essential component of the Army Future Force. The mission of the CH-47 is to transport troops (including air assault), supplies, weapons, and other cargo in general support operations. The CH-47 is vital to Overseas Contingency Operations and Homeland Security needs of our nation. Secondary missions include medical evacuation, aircraft recovery, parachute drops, disaster relief, and search and rescue. These aircraft are fielded to heavy helicopter companies and Special Operations Aviation. The CH-47F is expected to remain the Army's heavy lift helicopter until at least the 2038 timeframe. The CH-47F Recapitalization Program will provide a more reliable, less costly to operate aircraft compatible with Joint digital connectivity requirements in the Future Force. Key product improvements integrate a new-machined airframe, a performance capability, Common Avionics Architecture System, Air Warrior, Common Missile Warning System, enhanced air transportability, Digital Advance Flight Control System (DAFCS) and an Extended Range Fuel System II for self-deployment missions. The CH-47F program extends the Army's Chinook fleets useful life 20 years incorporating reliability and maintainability improvements including airframe tuning for vibration reduction, corrosion protection, digital source collectors, Transportable Flight Proficiency Simulators, Cargo Floor Handling System, Ballistic Protection System, Transformation Sets, Kits and Outfits, Aviation Training Devices, M240 Window/Door Gun Mounts and an automated maintenance program with a 400-hour phase interval. The recapitalization program rebuilds and replaces all CH-47Ds and 61 Special Operations Aviation MH-47s to the CH-47F/MH-47G configuration.

Justification:

FY 10 Surge OCO funding in the amount of \$55 million will procure New Equipment Training (NET) (\$20 million) and 7,537 stroking seats (\$35 million).

Description:

The C-12 fixed wing aircraft platform hosts a number of Army Intelligence, Surveillance and Reconnaissance/Reconnaissance Surveillance and Target Acqusition (ISR/RSTA) sensor systems that support irregular warfare in Overseas Contingency Operations (OCO). Included in those systems are the Guardrail Common Sensor (GRCS), Aerial Reconnaissance Multi Sensor (ARMS) (Iraq), the Medium Altitude Reconnaissance and Surveillance Systems (MARSS) (Iraq and Afghanistan), and Constant Hawk (Afghanistan). The ARMS system is composed of B-200 (C-12) aircraft equipped with imagery sensors, specialized COMINT sensors, and an array of line of sight and beyond line of sight communications equipment. The aircraft were fielded to Operation Iraqi Freedom (OIF) in FY06 and have been providing daily support to the (Task Force Observe, Detect Identify, Neutralize (TF ODIN) commander. Constant Hawk (CH) in Afghanistan is hosted on King Air 350(C-12) aircraft. CH is a persistent surveillance wide field of view airborne intelligence, surveillance and reconnaissance (AISR) system conducting Counter Improvised Explosive Device (IED) surveillance and forensic force protection missions. CH uses high resolution Electro Optic (EO) cameras mounted on manned aircraft to provide persistent surveillance of a designated Named Area of Interest (NAI). The MARSS aircraft are primarily King Air 300's (C-12 variant) equipped with numerous sensors to include imagery and communications intelligence (COMINT) payloads. They also include several line-of-sight and beyond line of sight communications systems and on board (manned) processing of the imagery and COMINT.

INDIVIDUAL MODIFICATION

Date:

February 2010

MODIFICATION TITLE: MARSS 350ER [MOD 1] 1-10-00-OCO

MODELS OF SYSTEM AFFECTED: MARSS 350ER

DESCRIPTION / JUSTIFICATION:

The Medium Altitude Reconnaissance and Surveillance Systems (MARSS) aircraft will provide two additional airborne systems to perform ISR operations. These systems will be integrated on a King Air 350 Extended Range (ER) aircraft and include Imagery and Communications Intelligence (COMINT) sensors as well as line of sight and beyond line of sight communications equipment. It will allow for two on board operators to perform COMINT and imagery analysis and real time dissemination of the data from the aircraft. PM Fixed Wing will be procuring the platform aircraft via Funding line A02700.

DEVELOPMENT STATUS / MAJOR DEVELOPMENT MILESTONE(S):

- 4QFY10: Contract award for Prime Mission Equipment (PME)
- 3QFY11: Begin integration of two platforms
- 1QFY12: Completion of Integration, Testing, and Deployment of both Aircraft

Description:

The Family of Heavy Tactical Vehicles (FHTV) is used in line haul, local haul, unit resupply, and other missions throughout the tactical environment to support modern and highly mobile combat units. Systems include the Palletized Load System (PLS) and its companion trailers, flat racks (Container Roll-in/Out Platform (CROP)), Enhanced Container Handling Units (E-CHU), and the Movement Tracking System (MTS), as well as the Heavy Expanded Mobility Tactical Truck (HEMTT) and Heavy Equipment Transporter System (HETS). The FHTV line also includes the Forward Repair System (FRS), which is a mobile maintenance platform that mounts on a PLS or HEMTT. Effective in FY10, the FRS transitions to the Mobile Maintenance Equipment Systems program. The PLS configuration transitioned to an A1 to incorporate LTAS B-Kit Ready cab common with HEMTT A4, modern power train, independent front suspension, updated electrical system, Anti-Braking System (ABS) & traction control, and climate control.

Justification:

FY10 Surge procures 108 HEMTT M984A4 Trucks and 2 PLSA1 Truck required to support the build-up of forces in Afghanistan.

Description:

The Armored Security Vehicle (ASV) is an all-wheel drive armored vehicle that provides 360 degree ballistic protection against landmines, improvised explosive devices, and small arms. The ASV can accommodate a suite of fragmentation kits for additional armor protection. The ASV accepts the MK-19 Grenade Machine Gun, the M2 .50 caliber machine gun and the M249 5.56 mm Squad Automatic Weapon (SAW) machine gun. The ASV is transportable by air, rail, and marine transportation modes and is capable of carrying a crew of four. The vehicle has a diesel engine, automatic transmission, central tire inflation system, and a payload of 3,360 lbs. Additional survivability enhancements include: gas particulate ventilated face pieces, a multi-salvo smoke grenade launcher, a crew/engine compartment fire suppression system, an intercom system with radio interface, and blackout capability.

Justification:

FY 2010 Surge procures 13 ASVs required to support the oncoming OEF force surge. These ASVs will equip 2 Brigade Combat Teams or 1 Military Police Company.

The route clearance operation mission is accomplished with the Panther Medium Mine Protected Vehicle (MMPV) system which complements the Husky based Vehicle Mounted Mine Detection System (VMMD) and the Buffalo Mine Protected Clearance Vehicle (MPCV).

The Buffalo/MPCV is a six wheeled armor vehicle with a remote hydraulic boom arm for detecting and clearing mines and Improvised Explosive Devices (IEDs). The mine proof vehicle consists of a mine protected hull/body and provides a high degree of safety in respect to collision or vehicle roll over.

The Husky/VMMD is a mine protected, vehicle mounted mine detection and proofing system which is capable of finding and marking metallic explosive hazards. VMMD consists of two mine detection vehicles and three detonation trailers. Early versions of the VMMD procured for Operational Needs Statement (ONS) consisted of a Meerkat and a Husky, while more recent procurements consist of two Husky vehicles. Both vehicles are a single occupant system designed for mine blast protection and rapid field reparability.

The SPARK mine roller is designed to pre-detonate pressure-triggered bombs allowing the roller to take the brunt of the blast. The Kit (SPARK) can be used in conjunction with route clearance as well as other tactical wheeled and tracked platforms.

The Self-Protection Adaptive Roller Kit (SPARK) mounts to wheeled tactical as well as tracked vehicles to negate the Improvised Explosive Device (IED) threat for soldiers and vehicles. The Vehicle Optics Sensor System (VOSS) is a camera system possessing a day color camera, an intensified low light level TV camera (LLLTV), a thermal camera with zoom capabilities, pointing, with stabilization capabilities assuring high image quality when the vehicle is running or on the move. Interrogation arms allow soldiers to more safely investigate potential IEDs from inside a vehicle. Ground penetrating radar (GPR) aids in detecting IEDs.

Justification:

FY 2010 Surge procurement dollars in the amount of \$131.443 million procures the following hardware to support the route clearance mission with OEF surge requirements. SPARK mine rollers, VOSS cameras, interrogation arms and GPR.

The Buffalo Mine Protected Clearance Vehicle (MPCV) is a six wheeled armor vehicle with a remote hydraulic boom arm for detecting and clearing mines and Improvised Explosive Devices (IEDs). The mine proof vehicle consists of a mine protected hull/body and provides a high degree of safety in respect to collision or vehicle roll over. The MPCV system compliments the Panther Medium Mine Protected Vehicle (MMPV) and Husky based Vehicle Mounted Mine Detection System (VMMD) to perform route clearance operations.

Justification:

FY 2010 Surge procurement dollars procure 44 MPCVs. The Buffalo has set the Army's current standard for MPCV survivability in neutralizing the effects of landmines, direct fire, and IEDs. Mine Protected Route Clearance vehicles provide our forces with an effective, reliable and affordable blast protected platform capable of interrogating and classifying suspected explosive hazards. These systems locate and neutralize explosive devices before they result in fatal or catastrophic injury to civilians and soldiers.

The Vehicle Mounted Mine Detector (VMMD) is a mine protected, vehicle mounted mine detection and proofing system which is capable of finding and marking metallic explosive hazards. VMMD consists of two mine detection vehicles and three detonation trailers. Early versions of the VMMD procured for Operational Needs Statement (ONS) consisted of a Meerkat and a Husky, while more recent procurements consist of two Husky vehicles. Both vehicles are a single occupant system designed for mine blast protection and rapid field reparability. The VMMD compliments the Buffalo Mine Protected Clearance Vehicle (MPCV) and Panther Medium Mine Protected Vehicle (MMPV) to perform route clearance operations.

Justification:

FY 2010 Surge surge procurement dollars procures 43 VMMD Systems to support theater surge operations. The VMMD system is the only device that provides a mine and improvised explosive device (IED) detection capability on a blast survivable vehicle combined with a route width-proofing capability. The Mine Protected Route Clearance vehicles provide our forces with an effective, reliable and affordable blast protected platform capable of interrogating and classifying suspected explosive hazards, including explosive (IEDs). These systems locate and neutralize explosive devices before they result in fatal or catastrophic injury to civilians and soldiers.

The Navstar Global Positioning System (GPS) is a passive, space-based, radio positioning and navigation system providing precise, three-dimensional position, navigation, velocity and timing information to warfighters. The Navstar GPS program is designated as a DoD Space Program and the United States Air Force (USAF) is the executive service. The Joint Program Office develops GPS User Equipment (PE 35164F) with direct Army management and participation. The Army's Navstar GPS program provides for management, procurement, fielding, and support of GPS User Equipment developed by and largely procured through the Joint Program Office. GPS User Equipment consists of a family of receivers supporting both handheld and host platform environments. GPS receivers provide critical information to commanders, staff and Soldiers enabling increased lethality, dominant maneuver, precision strike, situational awareness and information dominance/superiority functions that will enhance the technologies to support the future Army. GPS User Equipment includes Army aviation users, ground users and host vehicles. Current/Future GPS User Equipment will be in both handheld (Precision Lightweight GPS Receiver [PLGR] and Defense Advanced GPS Receiver [DAGR]) and platform embedded (GPS Receiver Applications Module [GRAM] applications.) The DAGR has been designated a Horizontal Technology Integration (HTI) program and provides essential capabilities to numerous weapon systems and platforms. This program has been designated as a DoD Space Program.

Radio Improved High-Frequency (HF) Commercial Off the Shelf (COTS) Family consists of the AN/PRC-148 Tactical Handheld Radio (HHR), the AN/PRC-150 HF Radio, and the AN/PSC-5D & AN/PRC-117 COTS Tactical (TACSAT) Radios.

The HHR (AN/PRC-148) is a small, lightweight, full-featured Combat Net Radio operating contiguously over the UHF/VHF band (30-512 MHz) frequency range. The radio has embedded US type-1 COMSEC protection and is capable of both voice and data modes of operation. The HHR provides a hand held, highly flexible tactical radio useful over a very broad range of combat environments. System options include Single Channel Ground and Airborne Radio System (SINCGARS), HAVEQUICK I/II and Advanced Narrowband Digital Voice Terminal (ANDVT) waveforms, and a retransmission capability compatible with existing equipment.

The HF Radio (AN/PRC-150) is a COTS Non-Developmental Item family of advanced High Frequency radios that provides reliable, long-range tactical radio communications through use of advanced digital signal processing. The radio reduces the need for separate cryptographic equipment by embedding US type-1 COMSEC within the radio. The AN/PRC-150 family is available as a lightweight 20-watt man-pack radio, 20-watt and 150-watt vehicular radio, and a 400-watt transportable base station configuration. The radio provides reliable Line-of-Sight (LOS) and Beyond LOS communication in Upper Sideband, Lower Sideband, Automated Link Establishment, Continuous War, and FM modes. The radio is interoperable with other HF radios within the Army that have

Prior to FY08, SSN B81803 was a shared funding line used to procure TACSAT, Handheld, and High Frequency Radios. As of FY08, only TACSAT radios are funded by this line. The TACSAT radios (AN/PSC-5D and AN/PRC-117F) provide units with Multi-Mode voice and data radio communications in Line of Sight and SATCOM Modes of Operation. The radios provide Command and Control (C2) communications for the Corps and Division Warfighter Networks, and support Army Special Operations Forces C2. The radios operate in the VHF/UHF bands (30-512 MHz), and are available in three configurations: Manpack, SATCOM on the Move (SOTM), and Transit Case.

Justification:

FY10 OCO surge procurement dollars in the amount of \$5.794 million supports TACSAT Battle damage/Battle loss for IBCT, HBCT and CSS formations.

The Information Systems Security Program (ISSP) procures and fields Communications Security (COMSEC) solutions, key management capabilities and information assurance (IA) tools to secure the Global Information Grid (GIG). New and emerging architectures are driving the need to replace current inventory of stove pipe systems with technologically advanced (network centric/GIG compliant) devices that incorporate Chairman of the Joint Chiefs of Staff and Joint Requirements Oversight Council directed cryptographic modernization, advanced key management and network centric performance capabilities.

Biometrics (automated methods of recognizing a person based on a physiological or behavioral characteristics), is a component within the ISSP. DoD D 8521.01E established the Department of Defense (DoD) Biometrics Program and designated the Secretary of the Army (SA) as the Executive Agent for the DoD Biometrics program with the Director, Biometrics Task Force (BTF) serving as the Executive Manager. Project Manager (PM) DoD Biometrics is responsible for the development and procurement of the Biometrics Enabling Capability (BEC), previously named Biometric Enterprise Core Capability (BECC), which is the DoD Program of Record for an enterprise biometric system authoritative database/repository and enterprise biometric services. Additionally, PM DoD Biometrics is responsible for the development and procurement of the Joint Personnel Identification Version 2 (JPIv2), previously named Biometric Family of Capabilities for Full Spectrum Operations (BFCFSO), which is Tactical Collection Systems. An USD (AT&L) Acquisition Decision Memorandum, dated 2 Sep 2008, designated DoD Biometrics as an Acquisition Category (ACAT) 1 - Special Interest Program and directed the Army to achieve a favorable milestone decision to enter Engineering and Manufacturing Development not later than FY 2010.

This program provides for improvement/modernization of Army base level voice, data and video networks worldwide. It encompasses nontactical telecommunications services in support of Army base operations, Army Knowledge Management (AKM) Goal 3, Army Campaign Plan and Information Systems for Command and Control (C2) requirements and also acquires common user information systems in support of Military Construction, Army (MCA) projects. In addition, the NetOps operational construct provides the standardized operational processes and procedures that will enable the Army to integrate, synchronize, and deliver voice, data, imagery, applications, and network capabilities down to the individuals in both the operating force and generating force across all echelons and through all phases of Joint operations.

Justification:

FY10 Surge procurement dollars in the amount of \$296.000 million will procure NETOPS capabilities associated with the implementation of GNEC which will improve support to units deploying and returning from theater. GNEC is the Army Strategy to Transform LandWarNet (the Army portion of the GIG) to an Enterprise Level Activity that will operationalize LandWarNet, support "little to no notice" operations, support unit ability to fight upon arrival, support units in an austere operational environment, and dramatically improve network defense posture. This also covers the communications infrastructure support for theater operations in Europe, the Pacific, and Southwest Asia.

This program provides state-of-the-art major information system equipment such as integrated voice/data switches, Tier II computers (i.e., common user, multiple-purpose assets supporting Army installations and/or organizations), voice/data switch expansions, common user Local Area Network (LAN) transport equipment, basic telephone instruments, training range backbone connectivity, and secure data and encryption devices to support increased Secure Internet Protocol Network (SIPRNET) requirements. This equipment is installed in conjunction with Military Construction, Army (MCA). Also provides for the Army Material Command/Information Systems Engineering Command Program Management and Quality Assurance/Control of these worldwide construction efforts to ensure the appropriate Information Systems are planned, programmed, procured, and provided.

Justification:

FY10 Surge procurement dollars in the amount of \$296.000 million will procure NETOPS capabilities associated with the implementation of GNEC which will improve support to units deploying and returning from theater. GNEC is the Army Strategy to Transform LandWarNet (the Army portion of the GIG) to an Enterprise Level Activity that will operationalize LandWarNet, support "little to no notice" operations, support unit ability to fight upon arrival, support units in an austere operational environment, and dramatically improve network defense posture. This also covers the communications infrastructure support for theater operations in Europe, the Pacific, and Southwest Asia.

The Installation Information Infrastructure Modernization Program (I3MP) encompasses the modernization and upgrade of the Telecommunications/Information Infrastructure on Army installations in the Continental United States (CONUS), Europe and Pacific theaters, as well as Army Enterprise Systems. I3MP provides the capabilities to support the Defense Information Systems Network (DISN), Global Information Grid (GIG), Global Network Enterprise Construct (GNEC), Overseas Contingency Operations (OCO), Future Home Station Operation Centers (HSOC), command and control for Army Expeditionary, Joint and Combined Forces, Army Transformation, Army Knowledge Management (AKM) Goal 3, and the Army Campaign Plan. At the installation level, I3MP delivers an integrated Commercial Off The Shelf (COTS), information system that is state-of-the-art, secure, interoperable and with a high bandwidth capability to each end user building. The installation of Campus Area Networks (CAN)/Metropolitan Area Networks (MAN) provides the infrastructure to manage the Army's ever-increasing data transfer requirements supporting key wartime doctrine and information technology transportation initiatives. These high-speed backbone networks modernize site data transport capability, improve connectivity, standardize transport networks and increase capacity in support of critical Army missions. The modernization efforts will provide for the convergence of voice, video and data (on one platform) and EoIP (Everything over Internet Protocol). The newly installed switching equipment will support web-enabled applications, image processing for intelligence missions, distance learning, video conferencing, telemedicine and telemaintenance, health, morale and welfare calls, wireless telecommunications, remote access, automated directory assistance and network management. It will also provide for the implementation of network operation tools critical to security and management of the Army enterprise. At the enterprise level, I3MP provides the Army with capabiliti

The Installation Information Infrastructure Modernization Program-Europe (I3MP-Europe) is the European theater portion of the I3MP and is the primary initiative to digitize and provide increased voice and data connectivity to European Enduring Installations, support activities and deployed combat forces throughout the European Area of Operations. This critical program provides high-capacity and near real-time throughput for data, cable and voice solutions to European sustaining base installations; I3MP-Europe also installs Enterprise-level networks and infrastructure to support Army Transformation. As US Forces in Europe transform to optimally support Overseas Contingency Operations (OCO), this integrated, wide-ranging effort serves as the European Command's (EUCOM) critical link to the DoD-wide Defense Information Systems Network (DISN), Global Information Grid (GIG). This effort literally "takes bandwidth out of the equation" and facilitates European logistic, medical, and Warfighting support to Joint Expeditionary Forces deployed in direct support of OCO - especially Central Command (CENTCOM) and the newly-forming AFRICOM (Africa Command) Forces. It provides for the acquisition of transport switching equipment, the Defense Wave Division Multiplexed-Optical Transport Network (DWDM-OTN), and Fiber Optic Tie-Cables to provide enhanced communications capabilities across U.S. Army Europe's (USAREUR) fiber optic backbone network. Additionally, it includes Defense in Depth network security initiatives for the EUCOM network through the implementation of cutting-edge Top Level Architecture (TLA) security and Firewall equipment. I3MP's core objective is to create an infrastructure sufficiently robust and flexible to meet ever-increasing telecommunication requirements of the USAREUR footprint and Area Processing Center (APC) Architectures. This program also fields integrated, supportable Information Technology (IT) solutions for transformation of business processes, which enable the CIO/G-6, U.S. Army Europe to manage

REMARKS: Quantities reflect the number of sites where work is performed. I3MP is a complex program that orchestrates the implementation of multiple disciplines (connectivity (voice, data, Outside Cable Plant (OSP) network), capacity, storage and information assurance) across multiple locations each with their own developmental cycle, frequently resulting in the overlapping development and implementation of customized communications solutions (to meet unique and diverse mission conditions) at each Army installation. Unit costs and accompanying number of implementations (installations) will, therefore, vary from year to year, due to the complexity of the requirement, size of the installation, state of the information technology being replaced/modernized, the type of technology required, unique configuration and level of effort required to satisfy all requirements.

Distributed Common Ground System - Army (DCGS-A) is the Intelligence, Surveillance and Reconnaissance (ISR) system of sytems for Joint, Interagency, Allied, Coalition, and National data analysis, information sharing and collaboration. It provides access to theater and national intelligence collection, analysis, early warning and targeting capabilities in support of commanders at all echelons. DCGS-A will vertically and horizontally synchronize ISR Task, Post, Process and Use (TPPU) efforts; and operate in a networked environment at multiple security levels. DCGS-A provides a single integrated ISR ground processing system composed of joint common components that are interoperable with sensors, other information sources, all Battlefield Operating Systems (BOS), and the Department of Defense (DoD) DCGS Family of Systems. DCGS-A software and hardware is tailored by echelon and scaleable to the requirements of each mission, task, and purpose. The core functions of DCGS-A are: receipt and processing of space, airborne, ground and maritime ISR sensor data; control of select Army and joint ISR sensor systems; intelligence synchronization; ISR planning; reconnaissance and surveillance (R&S) integration; fusion of sensor information, and direction and distribution of relevant red (threat), gray (non-aligned), and environmental (weather and terrain) information. DCGS-A will combine and replace the ground processing capabilities of nine current force systems with a common, integrated capability that is fully interoperable with both the Network Centric Enterprise Services (NCES) and will be fielded in Fixed, Mobile and Embedded configurations. DCGS-A emphasizes the use of reach and split based operations to improve accessibility to data and reduce forward deployed footprint, executing the preponderance of ISR processing and exploitation from Fixed Sites that directly support tactical Commanders. Embedded DCGS-A will be the DCGS-A common software components that provide the standard services, applications and tools to conduc

Justification:

FY2010 Surge in the amount of \$45.103M will provid critical ISR tasking, processing, exploitation, and dissemination capabilities for 2 OEF Divisions, 5 BCTs, and 12 Functional/Multifunctional Bdes, by providing DCGS-A(V)3.1 enabled capabilities. For FY10 Surge: Procures 4 DCGS-A Enabled (DE) DTSS, 2 DE CGS, 2 DE ASAS, 8 DE ASAS IFS and 110 ASAS Lights.

All Funds will support Active Component.

Counter-Rockets, Artillery and Mortar (C-RAM) is an evolutionary Non-Developmental program initiated by the Army Chief of Staff in response to Iraqi threat and twice validated theater ONS. The primary mission of the C-RAM program is to develop, procure, field and maintain a system of systems that can detect rocket, artillery or mortar launches; warn the defended area with sufficient time for personnel to take cover; intercept rounds in flight, thus preventing damage to ground forces or facilities; and enhance response to and defeat of enemy forces. The C-RAM current capability utilizes a system of systems (SoS) approach, and is comprised of a combination of multi-service fielded and non-developmental item (NDI) sensors, command and control (C2) systems and a modified U.S. Navy intercept system, with a low cost commercial off-the-shelf (COTS) warning system and wireless local area network. The system is currently fielded to fifteen sites, providing them correlated air and ground pictures and linking them to the Army Battle Command System (ABCS) and the Joint Defense Network (JDN), via various forms of communications to provide situational awareness and exchange of timely and accurate information to synchronize and optimize automated Shape, Sense, Warn, Intercept, Respond and Protect decisions.

The fielding of the C-RAM SoS was accomplished through an incremental acquisition process driven by urgent operational needs, theater priorities and emerging capability requirements to provide counter-RAM capability to fielded forces. The C-RAM Program Office has fielded equipment to fifteen (15) Forward Operating Bases (FOBs) (Sense, Warn and Intercept to three (3) FOBs; Sense and Warn to twelve (12) additional FOBs). The C-RAM SoS approach was validated by a Proof of Principle demonstration in December 2004 and Army Test and Evaluation Command (ATEC) tests in Feb 05, Apr 05, Jul 05, Nov-Dec 05, Sep-Oct 06, Sep-Oct 08 and Oct 09.

This Combat Service Support (CSS) Communications program supports the Army's full spectrum logistics communication requirements under two programs: Combat Service Support Automated Information System Interface (CAISI) and Combat Service Support Satellite Communications (CSS SATCOM).

CAISI allows current and emerging battlefield combat service support Combat Service Support (CSS) automation devices within the logistics support areas to electronically exchange information via tactical networks. CAISI also interfaces with other battlefield, CSS, and sustaining base automated systems. CAISI provides unit commanders and managers an interface device to support current and future CSS doctrine during full spectrum operations, facilitating the concentration of users and the transfer of real time information in a highly fluid operational environment.

CSS SATCOM provides a highly effective, easy to use, transportable commercial SATCOM based solution to CSS nodes, supporting broadband information exchange up to Sensitive information, rapidly deployable anywhere in the world, and fully integrated into the Global Information Grid (GIG). Many of the citical Standard Army Management Information Systems (STAMIS) operate on the CSS SATCOM network (backbone) to support the mission and units in the field.

COMBAT SERVICE SUPPORT AUTOMATED INFORMATION SYSTEMS INTERFACE (CAISI) - CAISI allows current and emerging CSS Automation devices within the logistics support areas to electronically exchange information via tactical networks. CAISI also interfaces with other Combat Service Support (CSS), and sustaining base automated systems. CAISI provides unit commanders and managers an interface device to support current and future combat service support doctrine for the conduct of full spectrum operations.

Justification:

FY 2010 OCO funding in the amount of \$15.000 million procures hardware and support to integrate CAISI 2.0 modules enabling the communication of real-time logistics information and continues the replacement for the CAISI 1.0 which is approaching the end of its useful life.

A fully engineered system, this deployable tent city provides high quality climate-controlled billeting, dining, shower, latrine, laundry, and Morale Welfare Recreation (MWR) facilities and equipment capable of supporting 550+ soldiers. Force Provider is fully containerized for rapid deployment and is transportable by rail, sea, land, and air using C-130, C-141, C-17 or C-5A aircraft. With the addition of Cold Weather Kits (CWKs), the module is deployable in temperatures as low as -15 degrees Fahrenheit. Missions for Force Provider are: base camps for enforcement missions, peace keeping, theater reception/redeployment, intermediate staging base operations, humanitarian aid, and disaster relief; both in theater and in austere environments. Force Provider modules are placed in Prepositioned Stocks to meet critical Commander in Chief (CINC) Operations Plan requirements. These systems are configured with optional Power Generation Kits, Cold Weather Kits and Prime Power Kits which increase their deployment versatility.

The Army Acquisition Objective for Force Provider is 56 systems.

Justification:

FY10 OCO Surge procurement dollars in the amount of \$171.349 million produce 12 Force Provider modules that are critical to the Army's ability to deploy rapid basing capabilities, 3 Power Generation Kits, 1 Cold Weather Kit, and 10 sets of Expeditionary TRICON Systems (shower, laundry, latrine, kitchen, and shower water reuse). These systems are needed to replace battle losses

Quality Surveillance Equipment is a family of petroleum and water laboratories used to evaluate the quality of military fuels and palatable water for our soldiers.

Petroleum Quality Analysis System-Enhanced(PQAS-Enhanced): PQAS-Enhanced is a petroleum laboratory that utilizes the latest available commercial technology for petroleum testing. The system is used in forward areas to conduct over 20 different quality tests on petroleum products and offers immediate feedback of petroleum quality. PQAS-Enhanced is a new modular requirement for the Aviation Support Brigades and it replaces the current Air Mobile Petroleum Labs for ground aviation on a 1:1 basis. PQAS-Enhanced will reduce the logistic footprint with a two soldier crew instead of the present four soldiers required for the Air Mobile Lab. The Army Acquisition Objective is 65 systems.

Justification:

FY10 OCO Surge procurement funds in the amount of \$4.103 million funds the engineering support required to field PQAS-E in theater in support of OEF requirements.

Graders are used by Horizontal Companies, Engineer Support Companies, Asphalt Teams, and Quarry Platoons in support of modular force requirements. The heavy grader is diesel-engine driven, pneumatic tired, with articulated frame steering. It is equipped with a power shift transmission, fully enclosed cab, hydraulically operated blade and scarifier. The heavy grader may be driven from one field/work site to another and is used for grading, shaping, bank sloping, ditching, scarifying and general construction and maintenance of roads and airfields. The Approved Acquisition Objective is 598.

Justification:

FY 2010 OCO surge funding in the amount of \$3.390 million supports the procurement of 13 Heavy Graders. Funds support Operation Enduring Freedom (OEF) road construction and Forward Operating Base (FOB) construction. The capability provides the Army's forces improved mobility and deployability through immature infrastructure repair and rapid airfield construction and repair. The current grader fleet has exceeded its planned useful life of 15 years. New graders provide updated technology, electronics and hydraulics which support required readiness rates while reducing the logistics footprint.

The Scraper provides the Combat Engineer with essential equipment to perform their road building and site preparation mision in offensive, defensive, and rear area combat operations and in support of Rapid Deployment Force missions.

The Scraper, Elevating SP 11 Cubic Yard (CY) will be used by Engineer Support Companies for earthmoving work such as construction and maintenance of roads, airfields, and facilities to support the tactical mission. This item has a heaped capacity of 11 CY and can be transported in two sections by helicopter. The Scraper shall be capable of being loaded and rigged on an air delivery platform and air delivered by low velocity airdrop. The Army Acquisition Objective (AAO) is 760.

The 14-18 CY Heavy Scraper will be used by Horizontal Construction Companies. The 14-18 CY Scraper is a self-propelled, open bowl, two axle, single diesel engine driven, articulated frame steer vehicle with pneumatic tires. The loading capacity is 14 CY struck and 18 CY heaped. Normal mode of operation is to use a push tractor to maximize production. The self-propelled Scraper can work alone and self load, but at reduced production capacity. The Scraper provides a hauling and dumping capability to perform efficient earthmoving tasks in support of earthmoving projects. The Army Acquisition Objective (AAO) is 812.

This Scraper will be used by Horizontal Construction Companies. The 14-18 Cubic Yard (CY) Scraper is a self-propelled, open bowl, two axle, single diesel engine driven, articulated frame steer vehicle with pneumatic tires. The loading capacity is 14 cubic yards struck, and 18 cubic yards heaped. Normal mode of operation is to use a push tractor to maximize production. The self-propelled scraper can work alone and self load, but at reduced production capacity. The scraper provides a hauling and dumping capability to perform efficient earthmoving tasks in support of earthmoving projects.

The Army Acquisition Objective (AAO) is 812.

Justification:

FY10 OCO surge procurement funds in the amount of \$1.428 million procures 1 Heavy Scraper. Funds support Operation Enduring Freedom (OEF). Units conduct construction missions both in Forward Operating Base (FOB) and outposts. New Scrapers will provide updated technology, electronics and hydraulics which will increase the current readiness and reduce the logisitics footprint.

Loader, Scoop Type, 2.5 Cubic Yard, Light Type II is currently assigned to Combat Support Brigade (CSB) Engineer (EN) Companies, Concrete Teams, Training and Doctrine Command (TRADOC) and the Armored Cavalry Regiments (ACR) elements. The Light Type II general purpose scoop loader is a versatile machine which is a crucial part of the maneuver and mobility force, that supports the Brigade Combat Team (BCT) in the Army's Future Force. The loader is a diesel-engine driven, four-wheel-drive machine with rear axle oscillation and articulated frame steering. The hydraulically-operated scoop bucket is attached to the front of the loader by means of a push frame and lift arms. Loaders are usually equipped with one piece general purpose bucket or a multipurpose (hinged jaw) bucket. These vehicles will feature a quick-coupler mechanism to attach/detach the bucket, fork lift attachment, and sweepers. Crew survivability will be addressed in accordance with the Army's Long Term Armor Strategy (LTAS).

Justification:

FY10 OCO surge procures 7 Light Loaders to support Forward Operating Base (FOB) requirements for troops deploying in support of Operation Enduring Freedom.

The Approved Acquisition Objective is 357.

Loader, Scoop Type, 2.5 Cubic Yard (CY) Light Type II is currently assigned to Combat Support Brigade (CSB) Engineer (EN) Companies, Concrete Teams, Training and Doctrine Command (TRADOC) and the Armored Cavalry Regiments (ACR) elements. The Light Type II general purpose scoop loader is a versatile machine which is a crucial part of the maneuver and mobility force, that supports the Brigade Combat Team (BCT) in the Army's Future Force. The loader is a diesel-engine driven, four-wheel-drive machine with rear axle oscillation and articulated frame steering. The hydraulically-operated scoop bucket is attached to the front of the loader by means of a push frame and lift arms. Loaders are usually equipped with one piece general purpose bucket. These vehicles will feature a quick-coupler mechanism to attach/detach the bucket, fork lift attachment, and sweepers. Crew survivability will be addressed in accordance with the Army's Long Term Armor Strategy (LTAS). The Army Acquisition Objective (AAO) is 357.

Justification:

FY10 OCO surge procures 7 Loader, Scoop Type, 2.5 Cubic Yard (CY) Light Type II to support troops deploying in support of Operation Enduring Freedom (OEF).

The Hydraulic Excavator (HYEX) Type I is assigned to Multi-Role Bridge Companies (MRBCs) and Horizontal Companies. The Type I HYEX provides a multi-functional construction capability that can dig, trench, dredge, scoop, lift, dump, demolish, and reduce existing structures. The HYEX is a commercial item of construction equipment with minor military modifications. It is a diesel engine driven, self-propelled, track mounted, hydraulically controlled system, equipped with a hydraulic quick disconnect coupler for use with a wide variety of attachments. The HYEX is transported by highway, rail, marine, and air in C-17 and C-5 aircraft. A Type I HYEX is equipped with a hydraulic impact breaker, hydraulic plate compactor, and buckets for general excavation, digging, trenching and lifting. Crew survivability will be addressed in accordance with the Army's Long Term Armor Strategy (LTAS). Systems must be procured to fill Table of Organization and Equipment (TO&E) shortages related to Future Engineer Force (FEF) modularity requirements.

HYEX Type I AAO: 251 systems.

Justification

FY10 OCO surge procurement funding in the amount of \$2.832 million procures nine (9) Type I HYEX systems. The Type I HYEX is an organic earthmoving piece of equipment supporting

The High Mobility Engineer Excavator (HMEE) is a family of vehicles consisting of the Interim HMEE (IHMEE, ended in FY04), HMEE Type I, HMEE Type II, and HMEE Type III. HMEE Type I and HMEE Type II are developmental military unique vehicles. The HMEE Type III is a commercial off the shelf backhoe loader with minor military modifications. The family of HMEEs supports the Engineers in the following engineer forces: HMEE Type I supports the Brigade Combat Team (BCT), the HMEE Type III will support the Airborne and Air Assault forces, and the HMEE III supports the Combat Support Brigades (CSB). The family of HMEEs is lightweight, all wheel drive, diesel engine driven, high mobility vehicles with backhoe, bucket loader, and other attachments. The vehicles within the Family of HMEEs support the Air Ground Lines of Communication (A/G LOC) forces and the Rapid Tactical Earthmoving (RTE) forces, providing engineers the capability to repair/improve roads, trails, bridges, and airfields, rapidly dig combat emplacements (i.e., crew served weapon positions, command posts, and individual fighting positions) for units throughout the entire theater of operations. Crew survivability will be addressed in accordance with the Army's Long Term Armor Strategy (LTAS). The family of HMEEs supports the Future Engineer Force (FEF).

The Approved Acquisition Objective is: 1,346(HMEE I: 654/HMEE III: 692).

The High Mobility Engineer Excavator Type I (HMEE I) is a non-developmental item uniquely made for the military. HMEE Type I supports the Brigade Combat Team (BCT) within the Future Engineer Force (FEF). HMEE Type I is an all wheel drive, diesel engine driven, high mobility vehicle with backhoe, bucket loader, and other attachments, that is self-deployable (no truck/trailer combination required) and is capable of driving a minimum of 40 MPH on improved roads and 25 MPH off-road, weight 30,000 pounds, and is air transportable via C-130 aircraft. The high mobility of the HMEE Type I provides an earthmoving machine capable of maintaining pace with the Army's current and future combat systems and rapid movement between battle positions. The HMEE Type I is part of the Rapid Tactical Earthmoving (RTE) force and is used for clearing rubble and debris from routes and airfields; constructing Unmanned Aerial Vehicle (UAV) forward airstrips; providing survivability positions for critical assets like C2, radar and logistics (fuel and ammunition); improving ford sites; and supporting limited Combat Support (CS) and Combat Service Support (CSS) missions in forward area of the theater. Crew survivability will be addressed in accordance with the Army's Long Term Armor Strategy (LTAS).

The Army Acquisition Objective(AAO) is 654.

This program covers various types of Construction Equipment (CE) where the acquisition cost for each line item is below \$5.0 million. These programs provide the enhanced capabilities to the current force making them able to execute their expeditionary mission.

- 1-2. Attachments for: Skid Steer Loaders, Type II and Type III; Attachments include the following: sweepers, forklift attachments, augers, rollers, compactors, picket pounders, impact breakers, four in one buckets, and snow blades. Attachments are used to provide engineer units flexibility in accomplishing mission tasks.
- 3. Well Drilling Rig is a three piece system consisting of a self propelled drill rig, support/ tender truck, and a mud trailer. The system will be used to produce water where surface or commercial sources do not exist. The drill rig is a hydraulic, top-head driven unit with a telescoping mast capable of employing a standard 20 foot steel drill string to a depth of 1700 feet. The support/tender truck will have a 2500 gallon water tank, an auxiliary 500 gallon fuel tank, and a crane. The mud trailer will contain a mud mixing/cleaning system.

The US Army Rapid Equipping Force (REF) was established to provide urgently needed state-of-the-art technology to soldiers in the field to meet immediate warfighter needs under operational conditions in the current theaters. The Specifically the REF is charged to: EQUIP operational commanders with off-the-shelf (government or commercial) solutions or near term developmental items that can be researched, developed and acquired quickly - ideally within 90 days. INSERT future force technology solutions that engaged and deploying forces require by developing, testing and evaluating key technologies and systems under operational conditions. ASSESS capabilities and advise Army stakeholders of findings that will enable forces to confront an adaptive enemy rapidly. For the REF, necessary material solutions can only be determined as "real time" threat modes are identified. Countermeasures to these evolving threats must be developed/purchased/modified, often within weeks, for the first cycle of spiral type responses. The REF process rapidly provides capabilities to meet immediate warfighter needs and supports efforts to mitigate asymmetric and traditional threats. A key element of this process is the provision for execution flexibility. The REF process provides the mechanism to respond rapidly to an adaptive enemy who changes in days and months, not years. The REF focuses on finding effective capabilities to counter emerging and future threats.

Justification:

FY10 OCO Surge procurement funding of \$124.895 million provides funding to support emerging requirements identified by the warfighter, to include systems providing security augmention for greatly dispersed troops throughout theater. Forces are requesting critical enabling equipment to be in place to support the summer fighting season. REF Forward Teams in Afghanistan have worked with Combatant Commanders and Soldiers to identify warfighter needs. REF Rear is formulating solutions to rapidly fields new equipment to the deployed units.

All funding supports Active Army.

NOTE: (a) Equipment mix and configuration may change based on changes in operational environment and circumstances. (b) REF-Resource Management Capabilities Needs (RMCN) equipment and funding execution details will be provided in the Secretary of Army report to the Congressional Defense Committee in March and October of each year (per HAC Report #108-553, DoD APPNs Bill 2005, June 18, 2004, page 134.)

Physical Security Systems protect vulnerable critical assets and infrastructure from determined, highly motivated, and skilled intruders. Physical Security Systems include the Standard Intrusion Detection Systems (SIDS) (MA0781), the Commercial Intrusion Detection System (CIDS) (MA0782), and Other Physical Security Measures Equipment (MA0783). SIDS includes the Integrated Commercial Intrusion Detection System (ICIDS) and the Mobile Detection Assessment Response System (MDARS). Other Physical Security Measures Equipment includes the Automated Installation Entry (AIE) and other efforts consistent with Office of Provost Marshal General (OPMG) security measures. This item also includes the Lighting Kit Motion Detector (LKMD) (M02004) which provides enhanced force protection via early warning of intruder activity.

The program goal is to provide enhanced security to units, installations, and facilities. The physical security/force protection programs minimize risks and vulnerabilities by providing Commanders with the appropriate levels of protection through the use of available technology to safeguard personnel and Army assets. By increasing protection to personnel, facilities and equipment, the program supports unit readiness and deployment by reducing the vulnerability of units and installations to intruder and terrorist threats.

Justification:

FY10 OCO procurement funding in the amount of \$197.508 million is a surge request that procures 54 X-ray vehicle/cargo scanners, 26 higher energy vehicle/cargo scanners and 211 personnel scanners. All funding supports Active Component.

Description:	•					•		

This budget line item includes the Excalibur family of munitions for the use in the Lightweight 155mm, and the M109A6 Paladin.

Justification:

This is a war reserve item. FY 2010 Surge procurement builds a war reserve inventory in accordance with the Army's procurement goals.

FY 2010 Surge procurement dollars in the amount of \$2.055 million will procure 20 rounds.

Weapon System Proc U/C				0.1		·	0.1		

Description:

Excalibur provides improved fire support through a Precision Guided Extended Range family of munitions with greatly increased accuracy and reduced collateral damage. The Excalibur is compatible with the M777A2 Lightweight 155mm Howitzer (LW155) and the M109A6 Paladin Howitzer. Excalibur provides a 33% range increase over current Rocket Assisted Projectiles with a 10 meter circular error probable at all ranges, and is also highly resistant to GPS jamming. This item is Code B, not approved for service use.

Justification:

Excalibur is an international program, teamed with the Kingdom of Sweden (KoS), which contributes resources towards the development in accordance with an established Project Agreement. The Excalibur guided projectile program is using an incremental development approach to provide a combat capability to the Soldier as quickly as possible and to deliver advanced capabilities at lower costs as technology continues to mature and additional cost-reduction opportunities are developed. Increment 1a-1 has been fielded to units in Iraq and Afghanistan in response to urgent need requests in support of Operation Iraqi Freedom and Enduring Freedom. Increment 1a-2 will be delivered in FY 2010 and will greatly increase range to LW155 and Paladin. Increment 1b is a follow on the Artillery Precision development effort which will provide further performance improvements while significantly lowering unit costs.

This is a war reserve item. FY 2010 Surge procurement builds a war reserve inventory in accordance with the Army's procurement goals. FY 2010 Surge procurement dollars in the amount of \$2.055 million will procure 20 rounds.

TYPE CLASSIFICATION: TC Urgent Material Release: Increment 1a-1 April 2007 Full Material Release: Increment 1a-2 June 2010

Justification:

This is a training standard item used in both training and combat. FY2010 Surge procurement supports annual training and builds a war reserve inventory in accordance with the Army's procurement goals.

FY2010 Surge procurement dollars in the amount of \$5.000 million will procure 5,870 rockets.

The Hydra production contract includes three pricing matrices for unit prices that depend upon the cumulative quantity of all Hydra variants.
