**FY 2012 RDT&E, ARMY
PROGRAM ELEMENT DESCRIPTIVE SUMMARIES**

Introduction and Explanation of Contents

1. **General.** The purpose of this document is to provide summary information concerning the Research, Development, Test and Evaluation, Army program. The descriptive summaries are comprised of R-2 (Army RDT&E Budget Item Justification – program element level), R-2A (Army RDT&E Budget Item Justification – project level), R-3 (Army RDT&E Cost Analysis), R-4 (Schedule Profile Detail) and R-5 (Termination Liability Funding for MDAPs) Exhibits, which provide narrative information on all RDT&E program elements and projects through FY 2012.

2. **Relationship of the FY 2012 Budget Submitted to Congress to the FY 2011 Budget Submitted to Congress.** This paragraph provides a list of program elements/projects that are major new starts, restructures, developmental transitions, newly established, terminated or for which funding existed in the FY 11 budget but no longer exists in the FY 12 budget. Explanations for these changes can be found in the narrative sections of the Program Element R-2A Exhibits.

A. New Start Programs:

<u>PE/PROJECT</u>	<u>PE TITLE</u>	<u>PROJECT TITLE</u>
0604115/DS3	Technology Maturation Initiatives	Technology Maturation Initiatives
0203735/DS5	Combat Vehicle Improvement Program	Armored Multi Purpose Vehicle (AMPV)
0604808/434	Close Combat Capabilities Eng Dev	Anti-Personnel Landmine Alternatives
0603820/D20	UAS Modifications/Product Imp Prg	VTOL MODS/PIP
0603807/VS7	Medical Systems Advanced Dev	MEDEVAC Mission Equipment Package
0603817/S52	Soldier Systems – Adv Dev	Soldier Support Equipment – AD
0604270/VS6	EW Development	Integrated Electronic Warfare Sys
0604818/JN1	Army Tac Comm & Cont Hardware And Software	*Joint Network Node (JNN) Testing
0604820/E10	Radar Development	Sentinel
0203726/33C	Advanced Field Artillery Tactical Data System	Improved Position Azimuth Determining System (IPADs)
0303141/VU2	Global Combat Support System *Program Re-start	Installation Fixed Base (IFB)

B. Program Element/Project Restructures:

Old		New
<u>PE/Project</u>	<u>New Project Title</u>	<u>PE/Project</u>

D. Establishment of new FY 2012 Program Elements/Projects. (Does not include any major new starts)

<u>TITLE</u>	<u>PE/PROJECT</u>
Surface Science Research	0601102/VR9
Center for Advanced Research	0601104/VS2
Expeditionary Mobile Base Camp Technology	0602786/VT4
Expeditionary Mobile Base Camp Demonstration	0603001/VT5
Tractor Nails	0603130/DS8

Tractor Eggs	0603131/DS9
*High Performance Computing Modernization Program	0603461/DS7
Tractor Jute	0604131/DT1
Soldier Protective Equipment	0603827/VS4
Combat Service Support Systems – AD	0603804/VR8
Joint Effects Targeting Systems (JETs)	0604710/L79
Combat Service Support Systems	0604804/VR7
TWV Protection Kits	0604622/VR5
*transferred from RDT&E,DW PE 0603755D8Z	

E. Program Terminations.

<u>TITLE</u>	<u>PE/PROJECT</u>
Electric Gun Technology	0602618/H75
Aircraft Weapons	0603003/435
BCT Non-Line-of-Sight Launch System	0604646/F72
BCT Reconnaissance (UAV) Platforms	0604662/FC3
Close Combat Capabilities Eng Dev	0604808/016

F. Programs for which funding existed in the FY 11 budget but no longer exists in the FY 12 budget.

<u>PE/PROJECT</u>	<u>TITLE</u>	<u>Brief Explanation</u>
0601104/J22	Network Science & Tech Res	Restructure to 0601104/H50
0602618/H75	Electric Gun Tech	Termination
0602787/878	Hlth Haz Mil Material	Restructure to 0602787/869
0602787/879	Med Fact Enh Sold Eff	Restructure to 0602787/869
0603003/435	Aircraft Weapons	Termination
0603005/C66	DC66	Restructure to 0603130/DS8
0603006/DF7	DF7	Restructure to 0603131/DS9
0603308/978	Space Control	Restructure to 0604131/DT1
0603804/K42	Material Sustainment Support	Transition to Army Supply System
0603804/L04	Jt Light Tact Vehicle (JLTV)-AD	Transition to 0604804/L50
0603827/S49	Ground Soldier System (GSS)	Transition to 0604827/S75
0604270/L20	ATIRCM/CMWS	Restructured to 0604270/VU7 & VU8
0604609/198	Target Defeating System	Completed R&D
0604609/200	Smoke/Obscurant System	Completed R&D
0604622/659	Family of Hvy Tac Veh	Transition to production

0604642/E40	LTV Prototype	Completed R&D
0604646/F72	BCT NLOS Launch Sys	Termination
0604710/L76	Dismounted Fire Support Laser Targeting System	Restructured to 0604710/L79
0604804/L47	Improved Environmental Control Unit	Transition to production
0604805/589	Army Sys Engr & Warfighting	Restructured to 0604805/593
0604808/016	Close Combat Capabilities ED	Termination
0604817/482	Ground Combat ID	Restructured to
0605013/087	Distributed Learning System	Transition to production
0604662/FC3	BCT Reconnaissance (UAV) Platforms	Termination
0605605/E97	DOD HELSTF	Restructured to 0605601/F30
0203759/122	Jt Battle Command Platform	Restructured to 0604805/593
0203801/DF8	DF8	Restructured to 0203808/DS1
0203801/DF9	DF9	Restructured to 0203808/DS2
0305204/114	Tactical Unmanned Aerial Vehicles (MIP)	Restructured to 0305233/RQ7
0305204/D10	SUAV (MIP)	Restructured to 0305233/RA7
0305208/D15	MUSE & TES TADSS (MIP)	Completed R&D

3. **Classification:** This document contains no classified data. Appropriately cleared individuals can obtain further information on Classified/Special Access Programs by contacting the Department of the Army (ASA(ALT)) Special Programs Office.
4. **Performance Metrics.** Performance metrics may be found in the Department's Performance Budget Justification Book, dated February 2012.

A. Mission Description and Budget Item Justification

The objective of this program element (PE) is to evaluate materials for lighter weight and more survivable armor and for more lethal armaments. Project H7G supports the design, development, and evaluation of nanostructure materials and project H84 supports the design, development and evaluation of materials for more survivable and lighter weight armor and armaments.

Work in this PE builds on the materials research transitioned from PE 0601102A (Defense Research Sciences), project H42 (Materials and Mechanics) and PE 0601104A (University and Industry Research Centers), project J12 (Institute for Soldier Nanotechnologies) and applies it to specific Army platforms and the individual Soldier.

This work complements and is fully coordinated with efforts in PE 0602618A (Ballistics Technology), PE 0602601A (Combat Vehicle and Automotive Technology), PE 0602786A (Warfighter Technology), PE 0603001A (Warfighter Advanced Technology), PE 0603004A (Weapons and Munitions Advanced Technology), PE 0603005A (Combat Vehicle Advanced Technology), and PE 0708045A (Manufacturing Technology).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work is performed by the Army Research Laboratory (ARL), Adelphi, MD and Aberdeen Proving Ground, MD.

Project H7B funds congressional special interest items.

A. Mission Description and Budget Item Justification

The objective of this project is to support the design, development, and evaluation of nanostructure materials that improve the Soldier's survivability. This project funds collaborative applied research and integration of government, academic, and industry scientific research on nanomaterials derived from PE 0601104A/project J12 (Institute for Soldier Nanotechnologies (ISN)) to advance innovative capabilities.

The work is a collaborative effort between the ISN at the Massachusetts Institute of Technology, the Army Laboratories and Research, Development, and Engineering Centers, and the ISN industrial partners.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Army Research Laboratory (ARL), Adelphi, MD and Aberdeen Proving Ground, MD.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Nanomaterials Applied Research	4.968	5.238	5.299
Description: Devise and validate improved, physics-based, materials property models and concepts for multifunctional, lightweight, and responsive hierarchical material technologies. Exploit breakthroughs in nanomaterials and multifunctional fiber processing technologies (e.g., scale-up of processes and fabrication into woven materials) to enable revolutionary future Soldier program's protection capabilities. Coordinated research program is conducted internally by ARL and externally through a collaborative effort with ISN and ISN industry partners.			
FY 2010 Accomplishments: Examined concepts for the absorption of energy in personnel protection applications.			
FY 2011 Plans: Research novel materials and hybridization of materials for personnel protection in ballistic environments.			
FY 2012 Plans:

A. Mission Description and Budget Item Justification

The objective of this project is to support the design, development, and evaluation of materials that enable more survivable and lighter weight armor and armaments. This project provides the technical foundation for materials technologies in metals, ceramics, polymers, and composites. This project addresses the need for more survivability and lighter weight armaments through nanomaterials research across the spectrum of applications to improve performance, improved, physics-based, material, mechanical, and structural models; high strain rate material characterization techniques, non-destructive inspection/evaluation technologies, new high strength/temperature materials and coatings; and advanced fabrication/processing methodologies. Applied research efforts are focused on armor/armament materials, as well as lightweight structural/electronic materials and materials affording protection against chemical, biological, or directed energy threats. The overarching goals of this research are to provide optimized lightweight armor structures, improved affordable processing methods, and the development of modeling and simulation tools to facilitate future design efforts in support of current and future force systems.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

The work is conducted by the Army Research Laboratory (ARL) at its Aberdeen Proving Ground, MD, and Hampton, VA, locations.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Structural Armor	5.225	5.913	6.975
Description: Optimize lightweight armor materials/structures, processing methodology, and modeling and simulation tools to enable formulation of lightweight, frontal, and structural armors.			
FY 2010 Accomplishments: Optimized glass-ceramic laminate transparent composite materials at reduced weight; and examined interlaminar properties of multilaminate materials to optimize performance and reduce weight.			
FY 2011 Plans: Determine candidate materials and configurations for ceramic only transparent armor solutions; and characterize materials properties and microstructures to determine optimal configurations for ballistic protection.			
FY 2012 Plans:

Note

FY10 funding increase for congressional special interest items.
 FY12 funding realigned to higher priority efforts.

A. Mission Description and Budget Item Justification

The focus of this program element (PE) is to investigate research and evaluation of sensors and electronic technologies that enhance survivability, lethality, deployability, and sustainability capabilities. Focus is on research that provides the ability for joint fires to locate, identify, track, and engage targets as necessary with the overall goal of increasing lethality and survivability through the reduction of fratricide (project H15); research on advanced sensors, signal processing and information technologies that provide decisive new capabilities to locate, identify, and engage battlefield targets in tactical and urban environments (project H16); research on biological sensors and biologically derived electronics that exploits breakthroughs in biotechnology basic research in collaboration with the Institute for Collaborative Biotechnology (ICB) a University Affiliated Research Center (UARC) led by the University of California, Santa Barbara in partnership with California Institute of Technology and Massachusetts Institute of Technology and their industry partners (project SA2); research and evaluation of space-based remote sensing, signal, and information processing technology in collaboration with other Department of Defense (DoD) and government agencies to support space force enhancement and space superiority advanced technology integration into Army battlefield operating systems (project TS1); research on advancing perception for autonomous ground mobility, intelligent vehicle control and behaviors, human-robot interaction, robotic manipulation, and unique mobility for unmanned vehicles (project TS2).

Projects SA1 and SA3 fund congressional special interest items.

Work in this program element (PE) complements and is fully coordinated with efforts in PE 0602307A (Advanced Weapons Technology), PE 0602705A (Electronics and Electronic Devices), PE 0602709A (Night Vision Technology), PE 0602782A (Command, Control, Communications Technology), PE 0603772A (Advanced Tactical

A. Mission Description and Budget Item Justification

This project researches and investigates emergent combat identification (CID) technologies for Joint, allied, and coalition air-to-ground and ground-to-ground mounted, dismounted, forward observer, and forward air controller missions. Efforts include research on enabling technologies to provide a common battlespace picture for joint coalition situation awareness and fusion efforts to increase the survivability and lethality of coalition forces by fusing battlefield sensor and situational awareness data to identify friend from foe.

Efforts in this project are complimentary of PE 0603270A (EW Technology), PE 0602270A (EW Techniques), and other Services, allies and coalition partners as necessary.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work is performed by the Communications-Electronics Research, Development, and Engineering Center (CERDEC), Fort Monmouth, NJ and Aberdeen Proving Ground, MD.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Combat Identification (CID) Technologies	4.083	4.557	2.069
Description: Focus of this effort is to develop and evaluate potentially cost effective CID approaches that reduce fratricide, using non-traditional sensors to increase situational awareness (SA), and increase combat effectiveness of Soldier based and Brigade Combat Team (BCT) CID technologies. Work being accomplished under PE 0603270A/project K16 complements this effort.			
FY 2010 Accomplishments: Assessed technologies for incorporation into a universal/multi-platform CID capability. Candidate technologies included the Soldier Radio Waveform, laser/RF time difference of arrival, and geometric pairing techniques at point of detection/response; experimented with CID/SA data display.			
FY 2011 Plans: Model fusion algorithms for improved battlespace awareness to include geolocation and target identification algorithms utilizing blue force emitter information to resolve current radar, laser, and ultra-violet/infrared (UV/IR) warning receiver sensor ambiguities;

link to Distributed Common Ground System-Army (DCGS-A) Enterprise for initial assessment/user jury to obtain user community feedback and recommendations for algorithm improvements; perform communication and network modeling and simulation. FY 2012 Plans: Will improve algorithms to deconflict, fuse and correlate warning receiver and blue force emitter data with DCGS-A provided intelligence, surveillance and reconnaissance, based on initial user jury results; will investigate data transport requirements needed to support the generation of an enterprise-wide ground and air common operating picture that provides accurate and timely reporting of high value targets for enterprise-wide as well as organic platform SA for increased CID awareness.				
Title: Multi-Intelligence Data Fusion and Targeting Description: This effort investigates and develops software technologies for intelligence/battle command (Intel/BC) enterprise collaboration to provide faster and higher quality decision making support for the Commander and his key staff. Specific efforts focus on integrating the intelligence surveillance and reconnaissance planning and execution at the task force/battalion level through troop-level as well as efforts that enable the enterprise to identify, fuse, and trace/track specific human targets in an asymmetric environment. Work being accomplished under PE 0602270A/project 906 compliments this effort. FY 2010 Accomplishments: Coded, integrated and assessed a multi-intelligence sensor manager and planner into DCGS-A and Tactical Ground Reporting Network (TiGRNet); functionally mapped battle command mission tasks with the needed intelligence and geospatial data and collection opportunities; developed data extraction tools to incorporate political, military, economic and social information infrastructure and behavior modeling data using DCGS-A compliant multi-intelligence correlation service, integrated imagery and video data products for additional fidelity; developed a video-based tracker service for real-time and forensic viewing and analysis. FY 2011 Plans: Associate Intel requirements, geolocation data needs and collection opportunities with operational mission tasks for Intel and BC communities; mature common architecture and framework to provide a portable software environment, storage and access for Intel and Operations communities. Complementary work is also being accomplished under PE 0602270A/project 906.		3.485	3.317	-

A. Mission Description and Budget Item Justification

The objective of this project is to focus on applied research of advanced sensors, signal processing, and information technologies that will enable the future Soldier with decisive new capabilities to locate, identify, and engage battlefield targets in tactical and urban environments. The ultimate impact and utility of this work will be to greatly increase the lethality, range, and speed of engagement of the Soldier. Emphasis is on solving critical Army-specific battlefield sensing and information management problems such as false targets, complex terrain (including urban applications), movement of sensors on military vehicles, and exploitation of multimodal sensors.

Significant areas of research include: low cost sensors designed to be employed in large numbers as unattended ground sensors (UGS) for force protection, hostile fire defeat, homeland defense, counter terrorism operations, and munitions; tagging, tracking, and locating (TTL) of non-traditional targets; fusion of disparate sensors such as acoustic, seismic, electric-field (E-field), magnetic, radar, infrared (IR), forward looking IR (FLIR), laser detection and ranging (LADAR), visible imagers; low cost acoustic, seismic, and magnetic sensors that can passively detect, classify, and track battlefield targets such as personnel, heavy/light vehicles, and helicopters. Other areas of research include sensing technologies to locate gun fire and other hostile threats; enable stand-off characterization of infrastructure, equipment or materials; and allow the detection, tracking, and assessment of humans, especially in urban terrain. Further areas of research are high performance multi-function radio frequency (RF) systems that allow consolidated target acquisition, combat identification (ID), active protection, surveillance, and communications systems; passive and active RF sensors capable of high-resolution imaging to detect targets hidden in foliage, smoke, and fog; ultra wideband radar work enabling buried mine detection and target imaging through dense foliage and greatly enhanced robotic mobility; and Ultra-violet (UV) optoelectronics for battlefield sensors. Additional areas of research are aided/automatic target recognition (ATR) allowing sensors to autonomously locate and identify targets; advanced battlefield sensor and information processing to conduct a dynamic and real time situational assessment to present a common picture of the battlespace focused on low echelon commanders; and advanced information processing methods to provide automatic information technologies that utilize widely dispersed sensor and legacy information sources.

This work complements and is fully coordinated with the Communications and Electronics Research, Development, and Engineering Center (CERDEC), other Research and Development Engineering Centers (RDECs), and the Defense Advanced Research Projects Agency (DARPA).

This work is related to and fully coordinated with efforts funded in PE 0602709A (Night Vision Technology), PE 0603710A (Night Vision Advanced Technologies), and PE 0603001A (Warfighter Advanced Technology).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

A. Mission Description and Budget Item Justification

The objective of this project is to transition biotechnology research from PE 0601104/H05, Institute for Collaborative Biotechnologies (ICB). The ICB is led by the University of California, Santa Barbara (Santa Barbara, CA) in partnership with the California Institute of Technology (Pasadena, CA) and the Massachusetts Institute of Technology (Cambridge, MA). Applied research will be conducted that transitions breakthroughs in biotechnology basic research from the ICB to enable capabilities in sensors, electronics, photonics, and network science. Areas of applied research include bio-array sensors, biological, and bio-inspired power generation and storage, biomimetics, proteomics, genomics, network science, DNA research and development, control of protein, and gene expression. Efforts include designing and performing multi-scale dynamic and predictive modeling to understand biologically-inspired "sense and respond" systems: integrated system of sensor, information processing, and response mechanism and their components. The Army Research Laboratory and other Army organizations, including the Natick Soldier Research, Development, and Engineering Center, and Edgewood Chemical Biological Center, in collaboration with the ICB industry partners, will conduct applied research focused on biological sensors, biological, and bio-inspired materials, and biological and bio-inspired power generation and storage. The in-house research program (~20%) will link the ICB research to Army requirements and enhance the transition of this technology into the Army. The remaining funding (~80%) is focused on competitively awarded joint projects led by an ICB Industrial partner in collaboration with an Army laboratory and an ICB faculty member to transition ICB research into the Army and industry. The projects are programmed for three years each and are reviewed annually. Projects are intended to cover the entire breadth of the ICB program.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work is performed by the Army Research Laboratory, Adelphi, MD.

A. Mission Description and Budget Item Justification

This project researches and investigates technologies with the potential for space-based, high altitude, and cyberspace applications. Applied research efforts include the design and development of sensors and electronic components, communications, signal and information processing, target acquisition, position/navigation, and threat warning within space and high altitude environments as well as the design and development of technologies and analytical tools for cyber risk assessment and mitigation in acquisition systems. The applied research and technology evaluations conducted under this Project leverage other DoD space science and technology applications to support space force enhancement and cooperative satellite payload development. Successful technologies emerging from this project transition for maturation and demonstration under the Space Applications Technology in program element 0603006A.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the US Army Space and Missile Defense Command (SMDC) in Huntsville, AL.

B. Accomplishments/Planned Programs (\$ in Millions)

Title: Tactical Space Research	FY 2010	FY 2011		FY 2012
Description: This effort designs, develops, and evaluates space-based technologies and components that lead to smaller, lighter, and more responsive payloads. These technologies allow for the rapid integration and development of tactical payloads in support of responsive space and high altitude environments.	1.596	1.695		2.725
FY 2010 Accomplishments: Investigated multiple nano-satellite architectures and integration of multi-spectral and hyper-spectral bands for imaging sensors operating in high altitude and space environments; investigated use of multiple waveforms on single tactical radio relay payloads operating in high altitude and space environments; continued to conduct the Joint Space Experiment (JSE) for measurement of ground illumination.				
FY 2011 Plans: Develop component technologies for high altitude payloads and small satellites, such as sensor subsystems, data links/ cross links, propulsion, power, energy, guidance, navigation, and flight control; investigate protection technologies for uplinks,

A. Mission Description and Budget Item Justification

The objective of this project is to investigate autonomous mobility technology that will enable near autonomous unmanned ground vehicles (UGVs). Technical efforts are focused on advancing perception for autonomous ground mobility, intelligent vehicle control and behaviors, human-robot interaction, robotic manipulation, and unique mobility for unmanned vehicles. The project also evaluates the basis for the Robotics Collaborative Technology Alliance (CTA), a tri-Service research consortium joining researchers from the Department of Defense (DoD), other Government agencies, industry and academia in a concerted, collaborative effort to advance key enabling robotic technologies.

The applied research conducted in this program will be transitioned to technology development, demonstration, and materiel acquisition programs being conducted by the Office of the Secretary of Defense Joint Ground Robotics Enterprise and each of the Services. Research supports collaborative efforts with Defense Advanced Research Projects Agency (DARPA).

Robotics Technology was previously funded in PE 0602618A, project H03 and was transferred to PE 0602120, project TS2 starting in FY10 to more accurately align the research.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Army Research Laboratory (ARL) at the Aberdeen Proving Ground, MD.

B. Accomplishments/Planned Programs (\$ in Millions)

Title: Robotics CTA	FY 2010	FY 2011	FY 2012
Description: Conduct research to evaluate capabilities for advanced perception, intelligent control and tactical behavior, human-robot interaction, robotic manipulation, and unique mobility for unmanned systems to conduct multiple military missions for a full range of robots from man-portable to larger systems. Research focuses on new sensor and sensor processing algorithms for rapid detection and classification of objects in the environment enabling safe high-speed mobility and intelligent tactical behavior by future unmanned systems; implementing adaptive control strategies that will enable unmanned systems to display intelligent tactical behavior, formulation of control strategies that will facilitate use of unmanned systems in populated environments and	6.554	6.895	7.260

A. Mission Description and Budget Item Justification

This aviation technology program element (PE) conducts applied research applicable to rotary wing vehicle (RWV) technologies to move towards air vehicle objectives. Emphasis is on developing rotary wing platform technologies to enhance manned and unmanned RWV combat and combat support operations for attack, reconnaissance, air assault, survivability, logistics and command and control missions. The PE supports the research and development of components and subsystems for air vehicles in the areas of aviation and aircraft weapons technology (project 47A) and vehicle propulsion and structures technology (project 47B). This PE also supports the National Rotorcraft Technology Center (NRTC), a partnership of government, industry, and academia. Project 47C funds congressional special interest items. Efforts under this PE transition to projects supported by PE 0603003A (Aviation-Advanced Technology).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this PE is performed by the Aviation and Missile Research, Development, and Engineering Center (AMRDEC), located at Redstone Arsenal, AL; Fort Eustis, VA; Moffett Field, CA; and Hampton, VA, and at the Army Research Laboratory (ARL), located at Adelphi, MD; Hampton, VA; and Cleveland, OH.

A. Mission Description and Budget Item Justification

The objective of this project is to develop Rotary Wing Vehicle (RWV) technologies for manned and unmanned Army/ Department of Defense (DoD) rotorcraft to increase strategic and tactical mobility/deployability; improve combat effectiveness; increase aircraft and crew survivability; and improve combat sustainability. Areas of research address desired characteristics applicable to all aviation platforms, such as enhanced rotor efficiencies, improved survivability, increased structure and airframe capability, improved engine performance, improved sustainability, improved mission avionics performance, and reduced cost. This project supports the National Rotorcraft Technology Center (NRTC), a partnership of government, industry, and academia. This project leverages work accomplished in collaboration with the National Aeronautics and Space Administration (NASA). Technologies within this project transition to advanced technology development programs with application to future, as well as current, Army/DoD rotorcraft systems.

Work in this project is fully coordinated with PE 0603003A (Aviation Advanced Technology) and work in this project related to aircraft weapons integration is also fully coordinated with PE 0602624A (Weapons and Munitions Technology) and PE 0602303A (Missile Technology).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Aero-Flight Dynamics Directorate of the Aviation and Missile Research, Development, and Engineering Center (AMRDEC), (located at the NASA Ames Research Center, Moffett Field, CA; and the NASA Langley Research Center, Hampton, VA); and the Aviation Applied Technology Directorate, Fort Eustis, VA.

A. Mission Description and Budget Item Justification

The objective of this project is to investigate engine, drive train, and airframe enabling technologies such as multifunctional materials, fluid mechanics and high temperature, high strength, low cost shaft materials.

Work in this project complements and is fully coordinated with PE 0603003A (Aviation Advanced Technology).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy and the Army Science and Technology Master Plan.

Work in this project is performed by the Army Research Laboratory (ARL) at the NASA Glenn Research Center, Cleveland, OH, the NASA Langley Research Center, Hampton, VA, and the Aberdeen Proving Ground, MD.

A. Mission Description and Budget Item Justification

This program element (PE) designs and develops electronic warfare (EW) component technologies that deny, disrupt, or degrade the enemy's use of the electromagnetic spectrum for offensive or defensive operations. This is accomplished through the investigation of electronic support measures (ESM), countermeasures against communications systems and networks; the development of sensors used to identify and locate threat forces in an asymmetric environment; and threat warning and electronic countermeasures (ECM) against munitions sensors and targeting capabilities, missile guidance and targeting systems, and booby traps. Project 475 funds congressional special interest items. Project 906 protects high-value ground platforms, aircraft, and the Soldier from threat surveillance and tracking systems; imaging systems; and advanced radio frequency (RF)/electro-optical (EO)/infrared (IR) missiles, artillery, and smart munitions. Information fusion research addresses sensor correlation, relationship discovery, and management services through use of automated processing, as well as higher level reasoning techniques that support automated combat assessment. Project 906 also supports efforts related to research and application of key EW technologies to intercept, locate, and disrupt, current and emerging threat communications and non-communications emitters, to provide vital, quality combat information directly to users in a timely actionable manner. Specifically, its technologies focus on detecting threat sensors and emitters associated with weapon systems, targeting systems and command, control, communications, computers, and intelligence systems and networks.

Work in this PE is compliments PE 0603270A (EW Technology), PE 0602120A (Sensors and Electronic Survivability), and PE 0603772A (Advanced Tactical Computer Science and Sensor Technology). This PE is related to and fully coordinated with PE 0603008A (Command, Control, Communications Advanced Technology) and PE 0603710A (Night Vision Advanced Technology).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work is performed by the Army Research, Development and Engineering Command, Communications-Electronics Research, Development, and Engineering Center (CERDEC), Fort Monmouth, NJ and Aberdeen Proving Ground, MD.

A. Mission Description and Budget Item Justification

This project designs, develops, and applies key electronic warfare (EW)/information operations technologies to enhance platform survivability (to include ground combat vehicles, aircraft, and the dismounted Soldier) and to intercept and locate current and emerging threat communications and non-communications emitters. This project applies recent advances in radio frequency (RF), infrared (IR), and electro-optical (EO) sensor and jamming sources to detect, locate, deceive, and jam threats (to include radar directed target acquisition systems, target-tracking sensors, surface-to-air missiles (SAMs), air-to-air missiles (AAMs), top attack weapons, and electronically fuzed munitions). This project also pursues the ability to neutralize booby traps. This project develops information systems to provide vital, quality combat information directly to users in a timely actionable manner in accordance with concepts for future force intelligence operations. This project investigates RF collection and mapping technologies to offer real time emitter detection, location, and identification. In addition, this project enables a remote capability to disrupt, deny, or destroy threat communication signals and enables fusion (automated assimilation and synthesis) of battlefield intelligence data to enable interpretation of current and future enemy activities. This allows commanders to develop operational courses of action in time to act decisively and in a pre-emptive manner.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Army Research, Development, and Engineering Command, Communications-Electronics Research, Development, and Engineering Center (CERDEC), Ft. Monmouth, NJ and Aberdeen Proving Ground, MD.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Multi-Intelligence Data Fusion and Targeting	5.466	6.915	4.090
Description: This effort investigates and develops software technologies for advanced intelligence/mission command enterprise collaboration that enable the enterprise to identify, fuse, and trace/track specific human targets in an asymmetric environment. Work being accomplished under PE 0602120A/project H15 and PE 0603772A/project 243 compliments this effort.			
FY 2010 Accomplishments: Developed advanced data ingestion (throughput of high volume and non-traditional data types), data alignment/conversion (normalization), and correlation and data engineering management techniques.			
FY 2011 Plans:

Note

FY12 funding increase to support higher priority efforts.

A. Mission Description and Budget Item Justification

This program element (PE) designs, fabricates and evaluates advanced component technologies for tactical missiles, rockets, guided munitions, and their launch systems in order to increase lethality, precision, and effectiveness under adverse battlefield conditions while reducing system cost, size and weight. Major goals in Project 214 include enhancing the survivability of the munition, launch and fire control systems, and forward operating bases; increasing kill probabilities against diverse targets; and providing advanced simulation and virtual prototyping analysis tools. Projects 223, G04, and G05 fund congressional special interest items.

The work in this PE is complimentary to PE 0603313A (Missile and Rocket Advanced Technology), and fully coordinated with PE 0602624A (Weapons and Munitions Technology), PE 0603004A (Weapons and Munitions Advanced Technology), PE 0602618A (Ballistics Technology, Robotics Technology), PE 0602307A (Advanced Weapons Technology), and PE 0708045A (End Item Industrial Preparedness Activities).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

The work in this PE is performed by the Aviation and Missile Research, Development, and Engineering Center (AMRDEC), Huntsville, AL.

A. Mission Description and Budget Item Justification

This project designs, fabricates, and evaluates missile and rocket component technologies that support demonstration of affordable, lightweight, highly lethal missiles and rockets. Major areas of research include missile guidance components and subsystems; target acquisition systems; multi-spectral seekers; high-fidelity simulations; missile aerodynamics and structures; missile launch and fire control technologies; and missile propulsion including research to help solve the insensitive munitions requirements. A theme embedded throughout the efforts in this project is smaller, lighter, and cheaper (SLC) missile technology to reduce the cost and logistics burden of precision munitions. Major products of this PE transition to PE 0603313A (Missile and Rocket Advanced Technology).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Aviation and Missile Research, Development, and Engineering Center (AMRDEC), Huntsville, AL.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
<p>Title: Embedded Deeply Integrated Guidance & Navigation Unit (eDIGNU)</p> <p>Description: This effort built on previous High-G (gravitational force) micro-electromechanical systems (MEMS) Inertial Measurement Unit (IMU) and DIGNU research. The Embedded DIGNU incorporated the following: a next generation Selective Availability Anti-Spoofing Module (SAASM); enhanced anti-jam (A/J) capability; full system-on-a-chip technology for processor and memory to reduce DIGNU size; more robust deep integration algorithms; and improved inertial performance. This task was conducted in two phases in order to enable the first generation technology to be evaluated while the second generation design was matured.</p> <p>FY 2010 Accomplishments: Completed evaluation of the first generation inertial sensor assembly design and integrated with the eDIGNU to verify requirements were met. Evaluated IMU deliverables that included new gyro and accelerometer sensors, electronics, and packaging improvements. Evaluated the eDIGNU second generation deliverables that included a full system-on-a-chip module; increased A/J capability; updated software for the new inertial sensor assembly; and implemented algorithm improvements.</p>	7.296	-	-

and techniques; design advanced simulation technologies to enable missile component trade studies, and design technologies to enable more reliable micro-electromechanical missile components. FY 2012 Plans: Will design aerodynamic prediction codes for hypersonic flight, dynamic damping derivatives prediction methods, airfoil section enhancements, and inlet aerodynamics; will design integrated baseline system engineering tool for system-level simulations linking missile component models to system capability; will design and evaluate health monitoring technologies for current and future missile systems.				
Title: Smart, Stealthy, and Smokeless Missile Propulsion, Smart Structures and Enhanced Lethality Description: This effort designs enabling technologies to advance missile propulsion including reduced launch signatures, increased lethality, and improved structural integrity of light weight missile cases. Advanced minimum smoke propellants that meet insensitive munition requirements have degraded performance, thus there is a need to regain this performance for increased ranges and decreased time-to-target. FY 2010 Accomplishments: Demonstrated and validated missile control thruster analysis tools and design concepts for small diameter applications; fabricated multi-point initiation warheads; and conducted evaluation to determine the energy deposition effect of the warhead. FY 2011 Plans: Perform a flight demonstration of a variable yield warhead against a representative concrete target and transition to Guided Multiple Launch Rocket System; investigate feasibility of using existing and new propellant ingredients in missile and rocket propulsion to regain performance while maintaining insensitive munitions compliance. FY 2012 Plans: Will demonstrate high performance propellants; will perform signature evaluations of current Army ignition materials as a baseline for the signature metrics; and will develop, screen for sensitivity, and characterize candidate ignition materials.		5.546	4.965	4.201
Title: Defense against Rockets, Artillery and Mortars (RAM) - Interceptor Development Description: This effort designs and develops enabling missile component technologies to transition to the Defense against RAM effort in PE 0603313A. FY 2010 Accomplishments:		2.916	-	-

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2010	FY 2011	FY 2012
Define swarming missile mission concepts to derive and define key performance parameters for these missions; identify key component technologies for design and demonstration. FY 2012 Plans: Will finalize key component technology identification based on trade studies performed; will begin key component technology design; will begin guidance and control algorithm design to support attack of large arrays of targets; will evaluate options for low cost advanced sensor design for tracking of large arrays of targets.			
Title: Structural Electronics Description: This effort investigates innovative processes to embed electrical connections into the missile case structure for use in smaller missile designs. FY 2011 Plans: Investigate mechanical and electrical properties of emerging approaches to embed electrical connections in curved forms regarding their applicability to missile structure and component design. FY 2012 Plans: Will fabricate and evaluate sample missile electronics subsystems based on prior year results, will evaluate suitability for missile system application; and will document design guidelines based on results.	-	1.108	1.308

A. Mission Description and Budget Item Justification

This program element (PE) investigates enabling technologies for High Energy Laser (HEL) weapons. Project 042 develops component technologies such as efficient, high energy, solid state laser designs and adaptive optics, and lethality / effectiveness measurements that enable better models and simulations for future HEL weapon designs. Project NA5 funds congressional special interest items.

Work in this project is related to, and fully complements, efforts in PE 0602890F (HEL Research) and PE 0603924F (HEL Advanced Technology Program), PE 0605605A (DOD High Energy Laser Systems Test Facility (HELSTF)), PE 0602120A (Sensors and Electronic Survivability), and PE 0603004A (Weapons and Munitions Advanced Technology) Project L96, and is coordinated with PE 0603005A (Combat Vehicle and Automotive Advanced Technology) Project 441.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work is performed by the U.S. Army Space and Missile Defense Command (SMDC), in Huntsville, AL, the U.S. Army Aviation and Missile Research, Development, and Engineering Center (AMRDEC) in Huntsville, AL, and the High Energy Laser Systems Test Facility, at White Sands Missile Range, NM.

A. Mission Description and Budget Item Justification

This project investigates and develops advanced technologies for High Energy Laser (HEL) weapon systems to enable more efficient lasers with greater power output. This includes technologies to support development of alternate laser sources; precision optical pointing and tracking components; adaptive optics to overcome laser degradation due to atmospheric effects; and thermal management systems to remove excess heat. In addition, this effort conducts laser lethality testing and analysis against a variety of targets and investigates the impact of low-cost laser countermeasures. Solid State Laser (SSL) efforts continue to leverage other funds provided by the HEL Joint Technology Office (JTO), the Air Force, and the Navy to develop multiple technical approaches that reduce program risk and maintain competition.

Work in this project is related to, and fully coordinated with, efforts in PE 0602890F (HEL Research) and PE 0603924F (HEL Advanced Technology Program), PE 0605605A (DOD High Energy Laser Systems Test Facility (HELSTF)), PE 0602120A (Sensors and Electronic Survivability), PE 0603004A (Weapons and Munitions Advanced Technology) Project L96, and to PE 0603005A (Combat Vehicle and Automotive Advanced Technology) Project 441.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy and the Army Science and Technology Master Plan.

Work is performed by the U.S. Army Space and Missile Defense Command (SMDC), in Huntsville, AL, the U.S. Aviation and Missile Research, Development, and Engineering Center (AMRDEC) in Huntsville, AL, and the High Energy Laser Systems Test Facility (HELSTF), at White Sands Missile Range, NM.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Solid State Laser (SSL) Effects	2.837	2.925	5.948
Description: This effort provides the underlying data required to support system engineering designs, lethality analysis, and modeling and simulation (M&S) tools for laser weapon systems.			
FY 2010 Accomplishments: Conducted expanded full scale static SSL lethality evaluations against rocket, artillery, and mortar (RAM) targets, unmanned aerial systems (UASs), and other high priority threats to determine the laser energy required both on target and at the laser source to defeat them under various engagement ranges.			
FY 2011 Plans:

FY12 funding increase for Large Scale Distributive Training.

A. Mission Description and Budget Item Justification

This program element (PE) develops enabling technologies to create effective training capabilities for the Warfighter. The PE supports the underpinning technologies and understanding to establish architecture standards and interfaces necessary for realizing the Army vision of creating a realistic synthetic "electronic battlefield" environment for use across the spectrum of doctrine, organization, training, leader development, materiel, personnel, and facilities (DOTLM-PF). The Advanced Distributed Simulation project (project C90) focuses on advancing component technologies required for real time interactive linking within and among constructive, virtual, and live simulation and training by refining technologies for advanced distributed interactive simulation. The Modeling and Simulation for Training and Design (project D02), further develops concepts for immersive training and learning environments with the Institute for Creative Technologies (ICT) at the University of Southern California, Los Angeles, California. Photonics Research and Advanced Modeling and Simulation Initiatives (projects D01 and D14) fund congressional special interest items.

Work in this PE complements and is fully coordinated with PE 0601104A (University and Industry Research Centers), PE 0602785A (Manpower/Personnel/Training Technology), PE 0602787A (Medical Technology), PE 0603007A (Manpower, Personnel and Training Advance Technology), and PE 0603015A (Next Generation Training & Simulation Systems).

Projects D01 and D14 fund Congressional Interest Items.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

A. Mission Description and Budget Item Justification

This project develops enabling technologies for advancing distributed interactive simulation in synthetic environments such as networking of models, complex data interchange, and collaborative training. The project researches and develops the ability to create a virtual representation of combined arms environments, with the Warfighter-in-the-loop that constructive (event driven) simulation cannot simulate. Efforts in this project are fully integrated with the Army Research Laboratory (ARL) since the realignment of STTC to ARL, and coordinated with work at the Army Research Institute and the Medical Research Materiel Command.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Research, Development, and Engineering Command (RDECOM), Army Research Laboratory, Human Research and Engineering Directorate, Simulation and Training Technology Center (STTC), Orlando, FL.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Live, Virtual, Constructive (LVC) Simulations	3.130	3.716	3.949
<p>Description: This effort investigates the combination of Live, Virtual and Constructive (LVC) training technologies into a seamless event. Live training refers to personnel and systems performing an exercise mission; virtual training refers to personnel using simulators; and constructive training refers to computer-aided simulations that introduce a wider control of virtual forces. Developed methods and technologies are transitioned to PE 0603015A/project S29.</p> <p>FY 2010 Accomplishments: Investigated use of predictive technologies and artificial intelligence in constructive training to investigate behaviors and reasoning for computer-generated forces in asymmetric warfare simulations; continued technology improvements of sensor components for physics-based real-time dynamic environments for LVC training.</p> <p>FY 2011 Plans:</p>

A. Mission Description and Budget Item Justification

This project develops training applications to enable the Army to train any time and any place. Efforts include designing virtual humans that embody natural language, speech recognition in noisy environments, gesture, gaze, and conversational speech. Techniques and methods are assessed for integrating different sensory cues into virtual environments that result in enhanced training and leader development. The project leverages the capabilities of industry and the research and development community through the synthesis of creativity and technology, including work at the Army Research Institute and the Army Research Laboratory.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Research, Development, and Engineering Command (RDECOM), Army Research Laboratory, Human Research and Engineering Directorate, Simulation and Training Technology Center (STTC), Orlando, FL.

B. Accomplishments/Planned Programs (\$ in Millions)

Title: Immersive Technology Environments	FY 2010	FY 2011		FY 2012
<p>Description: This effort performs research and develops technologies that enable responsive and reconfigurable simulations that immerse human senses such as sight, sound, and touch in mixed reality environments consisting of physical elements providing touch and feel, objects such as obstacles and walls in combination with virtual imagery. Developed technologies and techniques are transitioned for maturation and demonstration to PE 0603015A/project S28.</p> <p>FY 2010 Accomplishments: Designed and developed approaches for rapidly inserting virtual content into large-scale, real-world training environments that can be rapidly reconfigured.</p> <p>FY 2011 Plans: Investigate technologies to make mixed reality training, which combines real and imagined images as well as environments, more portable and affordable.</p> <p>FY 2012 Plans:</p>	2.710	2.916		3.034

A. Mission Description and Budget Item Justification

This program element (PE) researches and develops automotive technologies that enable Army transformation. The PE supports the research and development of components and subsystems for ground combat/tactical vehicles in the areas of survivability (project C05), advanced automotive technology (project H77), and tank and automotive technology (project H91). Projects T26 and T31 fund congressional special interest items.

Work in this PE is related to, and fully coordinated with, PE 0603005A (Combat Vehicle and Automotive Advanced Technology), PE 0602618A (Ballistics Technology, Robotics Technology), PE 0602105A (Materials Technology), PE 0602716A (Human Factors Engineering Technology), PE 0602705A (Electronics and Electronic Devices), and PE 0708045A (Manufacturing Technology). Work in this PE is coordinated with the U.S. Marine Corps, the Naval Surface Warfare Center, and other ground vehicle developers within the Defense Advanced Research Projects Agency (DARPA) and the Departments of Energy, Commerce, and Transportation.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this PE is performed by the Tank Automotive Research, Development, and Engineering Center (TARDEC), Warren, MI.

A. Mission Description and Budget Item Justification

This project investigates, designs, and evaluates advanced armor concepts, ballistic defeat mechanisms, and armor packaging concepts to achieve lightweight, ballistically-superior armors/structures for combat and tactical vehicles. Armors are being investigated to meet anticipated ground combat and tactical vehicle survivability objectives. Additionally, this project focuses on analysis, modeling, and characterization of potential survivability solutions that could protect against existing and emerging threats. This analysis is used to aid in the identification of technologies to enter maturation and development in PE 0603005A/project 221.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Tank Automotive Research, Development, and Engineering Center (TARDEC) Warren, MI and is fully coordinated with work at the Army Research Laboratory (ARL), Aberdeen Proving Ground, MD.

A. Mission Description and Budget Item Justification

This project researches and develops automotive component technologies to meet ground combat and tactical vehicle objectives. The project funds the National Automotive Center (NAC), which conducts shared government and industry technology programs to leverage commercial investments in automotive technology research and development for Army ground combat and tactical vehicle applications.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by Tank Automotive Research, Development, and Engineering Center (TARDEC), Warren, Michigan and is coordinated with PE 0602705A (Electronics and Electronic Devices).

A. Mission Description and Budget Item Justification

This project designs, develops, and evaluates a variety of innovative and enabling technologies in the areas of vehicle concepts, virtual prototyping, power, thermal management, propulsion, mobility, survivability, vehicle diagnostics, fuels, lubricants, water purification, intelligent systems, and other component technologies for application to combat and tactical vehicles.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Tank Automotive Research, Development, and Engineering Center (TARDEC), Warren, Michigan.

Efforts in this project are closely coordinated with the Army Research Laboratory (ARL), the Defense Advanced Research Projects Agency (DARPA), the U.S. Army Engineer Research, Development, and Engineering Center, Edgewood Chemical Biological Center, and the Army Medical Department.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
<p>Title: Pulse Power:</p> <p>Description: This effort focuses on growing technology for compact, high frequency/high energy/high power density components and devices, which are enablers for several advanced electric-based weapon systems.</p> <p>FY 2010 Accomplishments: Designed and fabricated improved gate and bus structure design for high power applications; designed and developed Super Gate Turn-Off (SGTO) switch technology using Silicon Carbide (SiC) for high power applications.</p> <p>FY 2011 Plans: Investigate full up Si and SiC based SGTO applications such as high power microwaves, electrified armors, and directed energy weapons applications.</p> <p>FY 2012 Plans: Will investigate SiC based SGTO switches for electro-mechanical armor applications; will investigate SiC components in DC-DC chargers, and pulse chargers; will investigate improvements in fast high energy density capacitors with improved clearing agents using newly developed films for directed energy weapons (DEW).</p>	6.615	6.123	3.820

A. Mission Description and Budget Item Justification

This program element (PE) investigates and evaluates materials and ballistic technologies required for armaments and armor that will enable enhanced lethality and survivability. The PE supports applied research on lightweight armors and protective structures for the Soldier and vehicles; kinetic energy active protection for crew and components protection from ballistic shock and mine-blast; insensitive propellants/munitions formulations, novel multi-function warhead concepts; affordable precision munitions design; and physics-based techniques, methodologies, and models to analyze combat effectiveness of future technologies (project H80). Project H75 completed in FY10.

Work in this PE complements and is fully coordinated with efforts in PE 0602105A (Materials Technology), PE 0602120A (Sensors and Electronic Survivability), PE 0602601A (Combat Vehicle and Automotive Technology), PE 0602624A (Weapons and Munitions Technology), PE 0602705A (Electronics and Electronic Devices), PE 0602716A (Human Factors Engineering), PE 0603004A (Weapons and Munitions Advanced Technology), and PE 0603005A (Combat Vehicle Advanced Technology).

Project HB1 funds Congressional Interest Items.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this PE is performed by the Army Research Laboratory (ARL), Aberdeen Proving Ground, MD and Hampton, VA.

A. Mission Description and Budget Item Justification

In FY10, applied research for Electronic Gun (EM) Gun technology was to determine the effect of velocity and novel penetrator design on lethality; investigate advanced propulsion concepts to achieve velocities above current ordnance velocities; and research advanced energetics to increase penetrator performance.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Army Research Laboratory (ARL), Aberdeen Proving Ground, MD.

A. Mission Description and Budget Item Justification

This project investigates materials and design for armor/anti-armor formulations that provide advanced protection through tailored terminal ballistic mechanisms. Specific technology thrusts include: lightweight armors and protective structures; crew and component protection from ballistic shock and/or mine-blast; insensitive high energy propellants/munitions to increase lethality and reduce propellant/munitions vulnerability to attack; novel kinetic energy (KE) penetrator concepts to maintain/improve lethality; novel multi-function warhead concepts to enable defeat of a full-spectrum of targets (anti-armor, bunker, helicopter, troops); and physics-based techniques, methodologies, and models to analyze combat effectiveness of future technologies for improved ballistic lethality and survivability.

Work in this PE builds on the materials research transitioned from PE 0601102A (Defense Research Sciences): project H42 (Materials and Mechanics) and project H43 (Ballistics); and PE 0602105A (Materials Technology) and applies it to specific Army platforms and the individual Soldier. The work complements and is fully coordinated with efforts in PE 0602601A (Combat Vehicle and Automotive Technology), PE 0602786A (Warfighter Technology), PE 0603001A (Warfighter Advanced Technology), PE 0603004A (Weapons and Munitions Advanced Technology), PE 0603005A (Combat Vehicle Advanced Technology), and PE 0708045A (Manufacturing Technology).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Army Research Laboratory (ARL), Aberdeen Proving Ground, MD.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Structural Armor	12.128	12.890	9.640
Description: Optimize advanced lightweight structural, ceramic, and electromagnetic armor technologies for transition to current and future tactical and combat vehicle designers.			
FY 2010 Accomplishments:			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2012 Army		DATE: February 2011		
APPROPRIATION/BUDGET ACTIVITY 2040: <i>Research, Development, Test & Evaluation, Army</i> BA 2: <i>Applied Research</i>	R-1 ITEM NOMENCLATURE PE 0602618A: <i>BALLISTICS TECHNOLOGY</i>		PROJECT H80: <i>Survivability and Lethality Technology</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2010	FY 2011	FY 2012
Confirmed multi-hit capability of third generation armor concepts designed from emerging materials in PE 0602105/project H84 at goal weights against objective threats for vehicles; validated Electrical Protection System performance for tactical vehicles, both computationally and with experiments, in relevant environment. FY 2011 Plans: Validate the performance of third generation armor concepts under realistic environmental conditions, through testing coupled with modeling and simulation with emphasis on ceramic-composite and encapsulated ceramic technologies. FY 2012 Plans: Will investigate third generation structural armor performance incorporating most promising ceramic-composite and encapsulated ceramic materials technologies; will evaluate novel mechanisms against objective level future threats and transition validated concepts to the United States Army Tank Automotive Research, Development and Engineering Center (TARDEC) (PE 0602601A/project C05); will use modeling and simulation coupled with experimentation to validate emerging ballistic defeat mechanisms that couple structural materials w/energy absorbing mechanisms against future threats.				
Title: Mine Blast Protection Description: Develop mine blast, ballistic shock mitigation, and crew protection technologies to enable survivability of current and future platforms, ground tactical vehicles, and the individual Soldier. FY 2010 Accomplishments: Analyzed the ballistic shock effects of objective threat defeat on future vehicles; computationally addressed the interaction of blast waves from objective blast threat with magnetic plate materials investigated in PE 0602105A/project H84. FY 2011 Plans: Assess and computationally validate advanced mine protection concepts (to include active seating) at goal weights for threshold threat defeat, and prove performance under relevant environmental conditions. FY 2012 Plans: Will incorporate computationally representative energy absorbing seats and local soil characteristics into models and simulations of full-scale blast events in order to refine simulations for system design optimization by TARDEC in PE 0603005A; and will experimentally validate the simulated results for mine blast events.		4.012	3.844	5.407
Title: Precision Munitions Description: Develop advanced technologies to enable a broad spectrum of affordable precision munitions. Develop a multi-disciplinary approach to munitions system design by coupling physics-based models of interior ballistics, launch dynamics, flight		4.456	4.488	4.833

A. Mission Description and Budget Item Justification

The objective of this program element (PE) is to investigate and evaluate obscurant technologies to increase personnel and platform survivability and develop and validate forensic analysis methods for military and homemade explosive devices, including their precursors and residue. This PE pursues research in materials science and dissemination methodologies and mechanisms and technologies and techniques to enable forensic analysis of explosive signatures (project 552).

Work in this PE is related to, and fully coordinated with, PE 0603004A/project L97 (Smoke and Obscurants Advanced Technology) and PE 0603606A/project 608 (Countermine & Barrier Development).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

This work is performed by the Army Research, Development, and Engineering Command (RDECOM), Edgewood Chemical Biological Center (ECBC), Edgewood, MD.

A. Mission Description and Budget Item Justification

The project investigates and evaluates obscurant technologies that degrade threat force surveillance sensors and defeat the enemy's target acquisition devices, missile guidance, and directed energy weapons. This project investigates advanced infra-red (IR) and multi-spectral obscurant materials that provide effective, affordable, and efficient screening of deployed forces, while being safe and environmentally acceptable. Additionally, it researches and investigates forensic analysis technology in explosives and explosives-related chemical signatures, and develops and validates field sampling and forensics methods for use in a forward-deployed laboratory.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Army Research, Development, and Engineering Command (RDECOM), Edgewood Chemical Biological Center (ECBC), Edgewood, MD.

A. Mission Description and Budget Item Justification

The objective of this program element is to design, develop and evaluate individual and crew-served weapon technologies that enhance the fighting capabilities and survivability of dismounted battlefield personnel in support of all the Services. All Joint Service Small Arms Program (JSSAP) efforts are based upon the Joint Service Small Arms Master Plan (JSSAMP) and the Joint Capabilities Integration Development System's Small Arms Analyses. Project S50 funds congressional special interest items.

Work in this PE is related to, and fully coordinated with, efforts in PE 0602624A (Weapons and Munitions Technology), PE 0603607A (Joint Service Small Arms Program), and PE 0603827A (Soldier Systems-Advanced Development).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

This program is managed by the US Army Armament Research, Development, and Engineering Center (ARDEC), Picatinny Arsenal, NJ.

A. Mission Description and Budget Item Justification

This project designs, develops and evaluates individual and crew-served weapon component technologies that enable increased lethality for survivability of dismounted battlefield personnel in all the Services. All efforts are based upon the Joint Service Small Arms Master Plan (JSSAMP) and the Joint Capabilities Integration Development System's Small Arms Analyses.

Work in this PE is related to, and fully coordinated with, efforts in PE 0602624A (Weapons and Munitions Technology) and PE 0603607A (Joint Service Small Arms Program) and PE 0602786A (Warfighter Technology). The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

This program is managed by the US Army Armament Research, Development, and Engineering Center (ARDEC), Picatinny, NJ.

A. Mission Description and Budget Item Justification

The objective of this program element (PE) is to design and develop enabling technology for improved lethal and nonlethal weapons and munitions with increased performance and the potential for lower weight, reduced size, and improved affordability. This PE supports weapons and munitions development (project H18); technologies to maintain the lethality of US weapons and directed energy (DE) technologies and subsystems to support the weaponization of high power microwave (HPM), and short pulse lasers (project H19) and development of munition components such as fuzes, power, warheads with tailorable effects, and insensitive munition compliant energetic materials (project H28). Project H1A funds congressional special interest items.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this PE is primarily performed by the Armament Research, Development, and Engineering Center (ARDEC) at Picatinny Arsenal, NJ, in cooperation with the Army Research Laboratory (ARL) at Aberdeen Proving Ground, MD, the Communications-Electronics Research, Development, and Engineering Center (CERDEC), Fort Belvoir, VA, the Tank Automotive Research, Development, and Engineering Center (TARDEC), Warren, MI, and the Aviation and Missile Research, Development, and Engineering Center (AMRDEC), Huntsville, AL.

A. Mission Description and Budget Item Justification

This project designs and develops component technologies to enable affordable smart munitions that can be launched from multiple platforms as well as provide increased lethality and performance with reduced logistics and advanced direct/indirect fire capabilities.

Work in project H18 is related to, and fully coordinated with, efforts in projects H19 and H28 (also in PE 0602624A), PE 0602618A (Ballistics Technology), and projects 232 and L94 in PE 0603004A (Weapons and Munitions Advanced Technology).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

The work in this project is performed by the Armament Research, Development, and Engineering Center (ARDEC), at Picatinny Arsenal, NJ, and the Army Research Laboratory (ARL) at Aberdeen Proving Ground, MD.

A. Mission Description and Budget Item Justification

This project designs and develops technologies to support asymmetric countermeasures such as radio frequency and ultra-short pulse directed energy and efforts to maintain the lethality and overmatch of US weapons. Work in this project is related to, and fully coordinated with, efforts in projects H18 and H28 (also in PE 0602624A), PE 0602618A (Ballistics Technology), and projects 232 and L94 in PE 0603004A (Weapons and Munitions Advanced Technology).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

This work is performed by the Armament Research, Development, and Engineering Center (ARDEC), at Picatinny Arsenal, NJ, and the Army Research Laboratory (ARL) at Aberdeen Proving Ground, MD.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
<p>Title: Pulsed Laser Component Technologies</p> <p>Description: This effort develops and miniaturizes key Directed Energy technology components to enable a Laser Induced Plasma Channel (LIPC) capability. The LIPC effect uses a short pulse laser to generate a conductive path in the air in which high powered microwaves (HPM) and/or high voltage bursts are channeled to defeat different targets at stand-off. Related work continues in 0602624A/Project H19 in FY12 under title DE Standoff Enabler.</p> <p>FY 2010 Accomplishments: Matured model of critical components of LIPC system for optimal interaction of laser induced channel and high voltage waveforms; conducted studies of LIPC subsystems parameters to enhance transmission of the high voltage waveform required for desired range and target effects; and initiated design of advanced high quality critical subcomponents for a LIPC system.</p> <p>FY 2011 Plans: Develop LIPC system design based upon results of parametric studies and modeling efforts; and continue to mature and integrate subsystem components towards fieldable requirements, i.e. volume, weight, ruggedness.</p>	3.783	3.615	-

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2010	FY 2011	FY 2012
<i>FY 2010 Accomplishments:</i> This Congressional Interest Item supported integration of Tactical Autonomous Combat-Chassis (TAC-C) robotic vehicles with mortars and Remote Armament Systems (RAS) mission packages to give soldiers increased stand-off protection against ambushes and provide a rapid response means to significantly enhance force protection.				
<i>Title:</i> Center for Borane Technology <i>Description:</i> This is a Congressional Interest Item.		1.990	-	-
<i>FY 2010 Accomplishments:</i> This Congressional Interest Item applied nanotechnology research to develop explosive and gun propellants for applications in miniature and lightweight weapons systems.				
<i>Title:</i> Exploding Foils Initiators with Nanomaterial-based Circuits <i>Description:</i> This is a Congressional Interest Item.		2.387	-	-
<i>FY 2010 Accomplishments:</i> This Congressional Interest Item researched ways to reduce the cost of exploding Foils Initiators (which can save numerous lives by reducing unintended detonation) by 2 orders of magnitude, from hundreds of dollars to several dollars.				
<i>Title:</i> Research for Army Cannon Systems <i>Description:</i> This is a Congressional Interest Item.		2.387	-	-
<i>FY 2010 Accomplishments:</i> This Congressional Interest Item developed analytical and testing systems for composite cannon barrels.				
<i>Title:</i> MATRIC- Project National Shield Integration Center <i>Description:</i> This is a Congressional Interest Item.		1.194	-	-
<i>FY 2010 Accomplishments:</i> This Congressional Interest Item supported establishment of an integration center capability for Project National Shield (PNS), a System of Systems Security integration program. PNS is managed by the U.S. Army ARDEC and is focused on shielding the United States from all potential disasters, man-made or natural, by providing an integrated surveillance, warning, response and recovery capability.

A. Mission Description and Budget Item Justification

This project designs and develops enabling warhead and energetic technologies such as novel warhead architectures, new propellant techniques, and high-density explosives to produce smaller, lighter, more effective, multi-role warheads. Work in project H28 is related to, and fully coordinated with, efforts in projects H18 and H19 in this PE, PE 0602618A (Ballistics Technology), and projects 232 and L94 in PE 0603004A (Weapons and Munitions Advanced Technology).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

This work is performed by the U.S. Army Armament Research, Development, and Engineering Center (ARDEC), at Picatinny Arsenal, NJ, and the Army Research Laboratory (ARL) at Aberdeen Proving Ground, MD. The active protection system (APS) countermunition efforts are developed in collaboration with the Tank Automotive Research, Development, and Engineering Center (TARDEC), Warren, MI, PE 0603005A and the Aviation and Missile Research, Development, and Engineering Center (AMRDEC), Huntsville, AL, PE 0603313A.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
<p>Title: Scalable Warhead Technology</p> <p>Description: This effort designs scalable and adaptive explosives and reactive materials technology for either gun or missile-launched weapons and munitions that can deliver a broad spectrum of effects with reduced collateral damage. Efforts described here are coordinated and complimentary to related efforts in PE 0602624A/Project H18, PE 0603004A/Project 232 as well as PE 0602303/Project 214.</p> <p>FY 2010 Accomplishments: Designed and developed enhanced fragmentation, reactive materials technologies, multipurpose explosives, and initiation trains for warheads and scalable and adaptive munitions; compared performance of designs against predictive models, simulations, and baselines; and fabricated, tested and evaluated component technologies in static munition tests.</p> <p>FY 2011 Plans: Fabricate and investigate scalable and adaptive munitions; and test and evaluate warheads and munitions to determine characteristics and performance.</p> <p>FY 2012 Plans:</p>	7.570	8.016	4.433

A. Mission Description and Budget Item Justification

This program element (PE) is applied research on technologies in areas such as electronic components, power components, frequency control and timing devices, high power microwave devices, and display technologies. The applied research on these technologies will enable the ability to perform precision deep fires against critical mobile and fixed targets; investigate exceptional all-weather, day or night, theater air defense against advanced enemy missiles and aircraft; as well as investigate enhanced communications and target acquisition through support of capabilities such as autonomous missile systems, advanced land combat vehicles, smart anti-tank munitions, electric weapons, secure jam-resistant communications, automatic target recognition, foliage-penetrating radar, and combat identification. This PE sustains applied research on high-power, microwave, electronic components and technologies (project EM8), advanced portable power technologies (batteries, fuel cells, hybrids, engines, chargers, and power management) (project H11), applied research on flexible displays in conjunction with the Flexible Display Center (project H17), and applied research on electronic component technologies such as photonics, micro electromechanical systems (MEMS), imaging laser radar, magnetic materials, ferroelectrics, microwave and millimeter-wave components, and electromechanical systems (project H94).

Work in this PE complements and is fully coordinated with efforts in PE 0602120A (Sensors and Electronic Survivability), PE 0602782A (Command, Control, Communications Technology), PE 0602709A (Night Vision Technology), PE 0602783A (Computer and Software Technology), PE 0603001A (Warfighter Advanced Technology), and PE 0603772A (Advanced Tactical Computer Science and Sensor Technology).

Projects EM4, EM6 and EM7 fund congressional special interest items.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work is performed by the Army Research Laboratory, Adelphi, MD, and the Army Communications-Electronics Research, Development, and Engineering Center, Fort Monmouth NJ and Aberdeen Proving Ground, MD.

A. Mission Description and Budget Item Justification

This project conducts research and evaluate high-power electronic components and technologies. These technologies have application in compact, light-weight power and energy storage, power and energy conversion, conditioning, radio frequency (RF)/microwave and solid-state laser directed energy weapons (DEW), and traditional and non-traditional RF and laser electronic attack. The ongoing directed energy effects and power component work is coordinated with and, as appropriate, leveraged by DEW and power/energy programs in the Air Force, Navy, High Energy Laser Joint Technology Office, Defense Threat Reduction Agency, national labs, university consortia, and relevant industry and foreign partners.

The work in this project is coordinated with the Tank and Automotive Research, Development, and Engineering Center (TARDEC); the Armaments Research, Development, and Engineering Center (ARDEC); the Aviation and Missile Research, Development, and Engineering Center (AMRDEC); and the Communications and Electronics Research, Development, and Engineering Center (CERDEC). These efforts were previously funded in PE 0602120A (Sensors and Electronic Survivability).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work on this project is performed by the Army Research Laboratory (ARL), Adelphi, MD.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
<p>Title: High Power Components</p> <p>Description: Research and evaluate materials and component structures that enable the investigation of the higher energy density and efficiency required by next generation Army systems such as electromagnetic armor, hybrid-vehicle propulsion electronics, directed energy sources, pulse power, small unattended ground sensors, and Soldier systems.</p> <p>FY 2010 Accomplishments: Designed power sources and antennas for higher frequency and power output; implemented silicon carbide (SiC) high-power density modules for pulse switching levels > 10 Mega Watt (MW).</p> <p>FY 2011 Plans:</p>	2.069	2.323	1.177

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2010	FY 2011	FY 2012
Implement system with new sources and antennas for counter electronics applications; develop SiC based high-power density modules for switching levels > 25 MW; as well as investigate and evaluate pulse power technologies for electromagnetic armor and microwave applications. FY 2012 Plans: Will investigate advanced wide band gap materials for use in high voltage pulse applications (>10kV).				
Title: High Energy Laser Description: Research novel solid-state laser concepts, architectures, and design components enabling high energy laser technology for Army specific DEW applications. Exploit breakthroughs in laser technology and photonics basic research to meet the stringent weight/volume requirements for platforms. Applied research will be conducted in close collaboration with domestic ceramic (and other) material vendors, university researchers, as well as major laser diode manufacturers. FY 2010 Accomplishments: Implemented cryogenically-cooled, gain medium in highly scalable, eye-safe, Erbium (Er)-doped lasers based on advanced laser ceramics. FY 2011 Plans: Investigate power and efficiency scaling potential of resonantly-pumped Ytterbium (Yb)-free Er-doped fiber laser architectures for high power eye-safe DEW applications. FY 2012 Plans: Will investigate scalability and efficiency potential of resonantly-pumped, eye-safe, lasers in a 2-2.1 micrometer atmospherically transparent spectral domain based on Holmium (Ho)-doped crystals and ceramics.		2.400	2.591	2.499
Title: Directed Energy (DE) Description: Investigate, research, and evaluate technologies related to DEW technology, electronic warfare (EW) survivability/ lethality, and supporting high power components to enhance the survivability/lethality of Army platforms. FY 2010 Accomplishments: Designed, developed and implemented components to reduce the size and weight of counter Improvised Explosive Device (IED) and mines systems, as well as continued to conduct lab and field assessments to understand susceptibility level of targets; investigated RF DE interoperability issues by conducting susceptibility analysis of Army radios. FY 2011 Plans:		1.558	1.724	2.165

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2010	FY 2011	FY 2012
Conduct experiments with high-temperature, high power density 100 kW battery-to-bus converter. FY 2012 Plans: Will research control techniques and the use of advance passive devices to provide <60kW high-temperature (110 C) converters; and will investigate advanced power conversion techniques for directed energy applications.				
Title: Power Switching for Protective Systems Description: Investigate, research, and evaluate technologies relating to compact, high-power, high-efficiency pulse power for electronic survivability applications such as electromagnetic (EM) Armor, advance EM Armor, and Electronic Protection Systems. Such technologies include storage capacitors, direct current (DC-DC) converters, and high rate-of-current-rise pulse switches. FY 2010 Accomplishments: Evaluated fast rise storage capacitors at 1.5 joules/cubic centimeter (J/cc) and SiC pulse switch die at 3 kiloampere (kA) with fast rate-of-current-rise. FY 2011 Plans: Investigate component technology that can be implemented into a compact high-efficiency DC-DC pulse converter and SiC pulse switch die at 4.5 kA with fast rate-of-current-rise for powering a distributed EM Armor system. FY 2012 Plans: Will investigate SiC pulse switch die at 6 kA with fast rate-of-current-rise; and will experimentally validate a compact power converter for self-contained battery module concept that allows advanced high power systems to be used on current force and next generation vehicles.		0.626	1.649	1.225

A. Mission Description and Budget Item Justification

This project identifies, advances, and enhances emerging power generation, energy storage, and power management technologies. This project funds research in electrochemistry, energy conversion, and signature suppression technologies, including those for primary batteries, rechargeable battery hybrids, fuel cells, power management, and components for electromechanical power generation. This project also researches power sources that are smaller and more fuel-efficient, advanced cooling systems that enable tactical sustainability and survivability, and investigates novel power management methods through low power design tools and operating system dynamic power management software.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Army Research, Development and Engineering Command, Communications-Electronics Research, Development, and Engineering Center (CERDEC), Fort Monmouth, NJ and Aberdeen Proving Ground, MD.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Soldier Hybrid Power and Smart Chargers	8.937	7.736	7.257
Description: This effort develops and validates hybrid power sources, rapid battery chargers, and power management technologies in order to decrease Soldier load, increase power capabilities, and decrease battery sizes and costs.			
FY 2010 Accomplishments: Developed advanced fabrication processes that enabled the reproduction of lithium air (Li/Air) battery cells in larger scale batches suitable for production, and conducted experiments in a laboratory environment on a lithium air battery in packaged form having greater than 400 watt hours per kilogram (Wh/kg); developed a 25W hybrid power source at greater than 400 Wh/kg; conducted experiments on a micro-electro mechanical system-based burner and integrated it with a thermal electric engine for a portable power source functioning in a laboratory environment.			
FY 2011 Plans: Develop processes and materials required for an integrated safe Li/Air battery; evaluate a disposable Soldier battery (Li/Air) at 800 Wh/kg in a relevant environment; experiment with a 150-300W portable squad power source/charger weighing 25 lbs, and a 50-100W hybrid power source weighing 3.5 lbs at 1000 Wh/kg.			
FY 2012 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2010	FY 2011	FY 2012
Will develop a lower cost membrane for protected lithium anode portion of lithium air battery; will optimize solid electrolyte membrane to prevent lithium metal corrosion; will investigate and develop lower cost processes capable of high volume manufacturing of Li/Air battery; will experiment with packaged battery having >800 Wh/kg energy density; will validate safety characteristics of disposable Soldier battery (Li/Air); will experiment with disposable Soldier battery (Li/Air) in an operational environment; will assess balance of plant (controls, fans, heat transfer coatings, etc.) that will help improve efficiency for portable squad power source/charger and reduce weight of hybrid power source; will experiment with hybrid power source in a relevant environment.				
Title: Silent Mobile Power		3.571	4.252	4.138
Description: This effort investigates component and system level power technologies that provide higher energy, reduced weight, quieter, and more fuel and cost efficient power generation sources to support the full spectrum of C4ISR power consumers. Products are silent mobile power technologies for waste-heat recovery systems, transitional power sources in the 500W-2kW range, and towable 100 kW generator sets.				
FY 2010 Accomplishments: Experimented in a laboratory environment with a waste-heat recovery system and a 500W transitional power source.				
FY 2011 Plans: Experiment with a high mobility multipurpose wheeled vehicle towable 100 kilowatt power unit in a relevant environment; experiment with a waste-heat recovery system in a relevant environment.				
FY 2012 Plans: Will conduct studies to identify emerging nanomaterials for applications to power electronics and fuel processing subsystems for 250W to 2 kW applications; will advance and incorporate a new generation of materials (like catalysts for processing JP-8 for use in gasoline engines, ceramic nanocoatings applied to key electromechanical components to enhance durability/life/power-output of current generator sets, and nanotubes applied to develop thermoelectric materials with high electrical but low thermal conductivity) to augment performance of emerging and military power systems in the less than 2 kW range.

A. Mission Description and Budget Item Justification

The objective of this project is to conduct and support applied research at the Army's Flexible Display Center (FDC) at the Arizona State University. The FDC conducts applied research on flexible display technologies that would make them inherently rugged (no glass), light weight, conformal, potentially low cost, and low power. The resultant display technology would enable enhanced and new capabilities across a broad spectrum of Army applications. Work in the FDC is performed collaboratively with the Army Research Development and Engineering Centers (RDECs) that include; the Natick Soldier RDEC(NSRDEC), Tank Automotive RDEC (TARDEC), Communications-Electronics RDEC (CERDEC), Armament RDEC (ARDEC), and Aviation and Missile RDEC (AMRDEC).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is executed by the Army Research Laboratory (ARL), Adelphi, MD.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Flexible Display Center (FDC)	4.970	5.031	5.345
Description: The Flexible Display Center (FDC) is developing high resolution flexible reflective (electrophoretic) and emissive (organic light emitting diodes) displays.			
FY 2010 Accomplishments: The FDC continued full color designs and implemented color versions of flexible displays up to 6 inch diagonal (reflective) and 4 inch diagonal (emissive).			
FY 2011 Plans: FDC optimizes color reflective displays for size and resolution, and is transitioning reflective displays up to 6-8 inch diagonal to PEO Soldier.			
FY 2012 Plans: The FDC will continue to integrate color reflective displays and transition displays to integration efforts to include further development of emissive displays with size and resolution optimized to fulfill needs and requirements.

A. Mission Description and Budget Item Justification

The objective of this project is to conduct applied research on electronics and electronic devices including opto-electronics to support advanced power and energy generation and storage; Command, Control, Communications, and Computers (C4); and Intelligence, Surveillance, and Reconnaissance (ISR) technologies. Areas of investigation include: low noise clocks and oscillators; lasers and focal plane arrays for eye-safe laser radar and standoff target acquisition sensors like forward-looking infrared; micro-electromechanical systems (MEMS) for multi-function radio frequency (RF) applications as well as smart munitions; advanced RF modules to support radars and communications systems; high-temperature high-power inverter circuits for electric drives; prognostics and diagnostics to reduce logistics demands; micro-power generators and advanced batteries, fuel reformers, and fuel cells for hybrid power sources; and novel structures on new electronic materials for oscillator and opto-electronic applications. This research enables enhanced battlefield situational awareness; increased vehicle mobility, survivability, and lethality; reduced acquisition cost; and reduced operations and support costs.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Army Research Laboratory (ARL), Adelphi, MD.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011		FY 2012
<p>Title: Antennas</p> <p>Description: Design and develop high performance antennas and antenna arrays for RF front-end architectures supporting multifunction radar and communication systems. This work also includes evaluation and validation of these designs. Among the issues addressed in this antenna development are scanning techniques, broadbanding, beamforming, polarization, platform integration, and affordability.</p> <p>FY 2010 Accomplishments: Developed and assessed novel platform based antenna designs.</p> <p>FY 2011 Plans: Validate in-situ antenna performance.</p> <p>FY 2012 Plans:</p>	1.743	1.774	3.473

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2010	FY 2011	FY 2012
Will develop and fabricate new antenna material structures.				
Title: RF MEMS		1.606	2.394	4.231
Description: Investigate micro and nano technology for small, low cost, highly reliable, RF MEMS switches, resonators, and filters for multifunction RF applications; design highly stable low-noise oscillators with low-acceleration sensitivity by integrating photonic resonators and conventional microwave components to improve the capability of radar systems to detect slow moving targets; mature components and software for C4 technology; and perform research in advanced tactical software tools for mobile, ad hoc network access control, intrusion detection, and authentication techniques.				
FY 2010 Accomplishments: Investigated beam steering using an integrated piezoelectric MEMS (PiezoMEMS) enabled wafer level antenna, investigated an integrated PiezoMEMS switchable filter combining both low voltage switches with high-Q filters.				
FY 2011 Plans: Investigate system-in-package solutions for combining active components with PiezoMEMS wafer level antenna, PiezoMEMS switchable filters, and broadband PiezoMEMS switch matrices. Investigate building blocks for mechanical microcontroller based on PiezoMEMS switch technology (i.e. registers, latches, and arithmetic logic units).				
FY 2012 Plans: Will determine cycle reliability in packaged PiezoMEMS switches targeting lifetime in excess of 1 Billion Cycles; will develop switch technologies with extremely low on state resistances (<0.5 Ohm); will develop switchable filter technology spanning low MHz to low GHz; and will investigate PiezoMEMS devices for operation near or above 100 GHz.				
Title: Millimeter Wave Components		7.251	6.499	3.701
Description: Research, design, and investigate new component materials, structures, devices, and electromagnetic issues of millimeter wave (mmw) components and active devices, such as vacuum electronic (VE) devices monolithic microwave integrated circuits (MMICs), to achieve higher output power, power-added-efficiency, linearity, and dynamic range for increased operation and detection range.				
FY 2010 Accomplishments: Designed advanced mixed-signal RF integrated circuits (RFIC), and implemented models to investigate new materials and processes for high speed and high power electronic devices.				
FY 2011 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2010	FY 2011	FY 2012
Develop reduced chip-set, thermally optimized RF modules, and perform material and device measurements to correlate and validate device models for new materials and processes for high speed and high power electronic devices. FY 2012 Plans: Will design highly integrated silicon based technology for multi-channel, multi-function RFICs; will develop emerging III-V devices for heterogeneous integration of mm-wave to TeraHertz (THz) subsystems.				
Title: Imaging Laser Radar (LADAR) Description: Investigate eye-safe, scanned and scannerless three dimensional (3-D) LADAR for both long-range reconnaissance and short-range unmanned ground and air vehicle applications. Conduct studies on technologies for long-range non-cooperative biometric identification. Investigate optical limiter designs with promising nonlinear materials for passive protection of electro-optic (EO) vision systems from damage from laser threat devices. FY 2010 Accomplishments: Implemented broad-aperture fast opto-electronic shutters for optical sights, sensors, and Soldier vision; improved performance of liquid cell optical limiting materials and transitioned to Tank and Automotive Research, Development, and Engineering Center, as well as developed electro-optic characterization methods for thick poled electro-optic polymers; evaluated 3-D autonomous navigation LADAR integrated onto a small robotic platform (Packbot); and developed an optical augmentation laser-based sensor. FY 2011 Plans: Extend opto-electronic sensor protection effort to address jamming threats; ruggedize and harden autonomous navigation LADAR; and implement solid-state scannerless LADAR for unmanned ground applications. FY 2012 Plans: Will perform skin-based phenomenology measurements for development of long-range uncooperative biometrics identification; will integrate LADAR onto additional small-robotic platforms and perform relevant-environment experiments; and will experimentally validate multi-element electro-optic shutter array.		3.223	3.109	2.591
Title: Infrared (IR) Imaging Description: Investigate large area multi-color, passive infrared (IR) imaging focal plane arrays (FPAs) for long range target detection and identification. Investigate molecular beam epitaxy (MBE) growth techniques for the growth of mercury cadmium telluride (HgCdTe) on Silicon(Si), Strained Layer Superlattices (SLS) and Corrugated Quantum Well Infrared Photodetector (C-QWIP) detector arrays for both the mid-wave infrared (MWIR) and long-wave infrared (LWIR) spectral region to significantly decrease the focal plane array cost. Design and fabricate arrays for higher operating temperature. FY 2010 Accomplishments:		2.182	2.184	2.639

A. Mission Description and Budget Item Justification

This program element (PE) designs and develops core night vision and electronic sensor technologies to improve the Army's capability to operate in all battlefield conditions. Technologies pursued in this PE have the potential to provide the Army with new, or enhanced, capabilities to detect and identify targets farther on the battlefield, operate in obscured conditions, and maintain a higher degree of situational awareness (SA). Project H95 researches new infrared (IR) Focal Plane Array (FPA) technologies, assesses and evaluates sensor materials, designs advanced multi-function lasers for designation and range finding, and develops modeling and simulation for advanced sensor technologies. In FY11 through FY16 investments in advanced IR FPA technologies are increasing to expand research in novel FPA designs to ensure a world-wide technological and competitive IR sensor advantage for the United States. Project K90 funds congressional special interest items.

Work in this PE is fully coordinated with PE 0602120A (Sensors and Electronic Survivability), PE 0602705A (Electronics and Electronic Devices), PE 0602712A (Countermeasures Technology), and PE 0603710A (Night Vision Advanced Technology).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this PE is performed by the Army Research, Development, and Engineering Command (RDECOM)/Communications-Electronics Research, Development, and Engineering Center (CERDEC)/Night Vision and Electronic Sensors Directorate (NVESD), Fort Belvoir, VA.

A. Mission Description and Budget Item Justification

This project researches and develops component technologies that enable improved situational awareness (SA) at an affordable price. Component technologies include novel focal plane arrays (FPAs), processing and electronics improvements, and modeling and simulation to predict performance and to determine operational effectiveness. This research focuses on dual band infrared (IR) FPAs necessary to search, identify and track mobile targets in all day/night visibility and battlefield conditions, and to improve standoff detection in ground-to-ground and air-to-ground operations. In addition, very large format IR FPAs are needed for sensors to simultaneously provide wide area coverage in addition to providing the resolution for situation awareness, persistent surveillance and plume/gunflash detection. With the development of multispectral and hyperspectral algorithms, advanced dual band FPAs are being developed with on-chip hyperspectral functionality, which offer the ability to perform detection, identification, and signature identification at extended ranges as well as the ability to detect targets in "deep hide". In FY11 through FY16 investments in advanced IR FPA technologies are increasing to expand research in novel FPA designs to ensure the United States' technological and competitive IR sensor advantage.

Work in this project is fully coordinated with PE 0602705A (Electronics and Electronic Devices), PE 0602712A (Countermining Technology), and PE 0603710A (Night Vision Advanced Technology).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this PE is performed by the Army Research, Development, and Engineering Command (RDECOM)/Communications-Electronics Research, Development, and Engineering Center (CERDEC)/Night Vision and Electronic Sensors Directorate (NVESD), Fort Belvoir, VA.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Distributed Aided Target Recognition (AiTR) Evaluation Center of Excellence	1.278	1.288	1.323
Description: This effort researches a Defense-wide virtual/distributed capability to interactively process both real and generated 3-Dimension multispectral scenes from sensors simulations for evaluation of automatic target recognition (ATR) algorithms against realistic operational scenarios in aided or fully autonomous reconnaissance, surveillance, and target acquisition (RSTA) missions to include roadside threats/explosively formed projectiles.			
FY 2010 Accomplishments:

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2010	FY 2011	FY 2012
Continued testing of fused multiple ground-based sensors; investigated and developed hyperspectral and multi-spectral sensors. FY 2011 Plans: Research, investigate and develop algorithms for the autonomous detection and tracking of mounted and dismounted targets/ threats for distributed aperture systems, targets of focus are those that emerge from hiding/defilade in an urban combat arena. FY 2012 Plans: Will investigate the AiTR algorithm evaluation process for multiple sensor modalities including threat explosive detection; will evaluate AiTR algorithms in order to quantify performance against established figures of merit using real data of threat explosives in urban environments to differentiate threat explosives from clutter; will evaluate AiTR algorithms using real world scenario data including urban environments, threat explosive targets, and hard targets in order to further populate AiTR algorithm performance databases.			
Title: Sensor Modeling and Simulation Technology Description: This effort develops and investigates supporting engineering models, measurement techniques, and simulations concurrently with the development and transition of core sensor technologies. FY 2010 Accomplishments: Completed the development and validation of an air to ground persistent surveillance model; developed and validated sensor performance model improvements to more accurately address the search process to include: moving targets, moving observers, and environmental effects such as glint (reflective components), and complex clutter (foliage and urban structures). FY 2011 Plans: Develop and implement new sensor measurement models to include visible and short wave infrared (IR) bands and systems with nonlinear image processing; conduct analysis to define the next generation of cooled IR technology; begin the development of next generation simulations to support wargames and engineering tradeoff studies; develop and validate models to represent color or visible electro-optical (EO) IR sensors and distributed aperture systems. FY 2012 Plans: Will refine and complete development and validation of complex search and persistent surveillance models and simulations incorporating the next generation cooled IR technology; will incorporate the ability to effectively model and simulate moving targets and platforms in a full spherical (180 degrees by 180 degrees) sensor simulation; will continue development of next generation sensor simulations to support wargames and engineering tradeoff studies.	5.008	5.054	5.187

FY10 funding increase is for congressional special interest items.

A. Mission Description and Budget Item Justification

This program element (PE) investigates and develops applied technologies to improve countermine, signature management, and counter-sensors capabilities. The focus is on sensor technologies to improve detection of mines, explosive threats and directed energy; ballistic methods to defeat mines and explosive threats; and signature management technologies to reduce reconnaissance capabilities of the enemies. This PE also supports DoD's Center of Excellence for Unexploded Ordnance which coordinates and standardizes land mine signature models; maintains a catalogue of mine signatures; supports the evaluation of mine detection sensors and algorithms; and working in conjunction with the US Army Engineering, Research and Development Center (ERDC), examines countermine phenomenology of surface and buried mines, and explosive threats. This PE advances the state of the art in Countermine Technologies (project H24) and Camouflage and Counter Reconnaissance Technologies (project H35). Countermine Component Technology (project HB2) funds congressional special interest items.

Work in this PE is related to and is fully coordinated with PE 0602120A, (Sensors and Electronic Survivability), PE 0602624A, (Weapons and Munitions Technology), PE 0602709A, (Night Vision Technology), PE 0602622A, (Chemical, Smoke and Equipment Defeating Technology), PE 0602784A (Military Engineering Technology), PE 0603606A, (Landmine Warfare and Barrier Advanced Technology), PE 0603710A (Night Vision Advanced Technology).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this PE is performed by the Army Research, Development, and Engineering Command (RDECOM), Communications-Electronics Research, Development, and Engineering Center (CERDEC), Fort Belvoir, VA.

A. Mission Description and Budget Item Justification

This project investigates and develops new countermine technologies that use man-portable, ground-vehicular, and airborne platforms for detection, discrimination, and neutralization of individual mines, minefields, and other explosive threats. The goal of this project is to accurately detect threats with a high probability, reduce false alarms, and enable an increased operational tempo.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Army Research, Development, and Engineering Command (RDECOM)/Communications-Electronics Research, Development, and Engineering Center (CERDEC), Fort Belvoir, VA.

A. Mission Description and Budget Item Justification

This project evaluates and develops advanced signature management and deception technologies for masking friendly force capabilities and intentions. Technologies pursued under this effort reduce the cross section of sensor systems. Technologies investigated include the decentered field lens, wavefront coding, and spectral filtering and threat sensing algorithms.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Army Research, Development, and Engineering Command (RDECOM)/Communications-Electronics Research, Development, and Engineering Center (CERDEC), Fort Belvoir, VA.

A. Mission Description and Budget Item Justification

The objective of this program element (PE) is to conduct applied research on aspects of human factors engineering that impact the capabilities of individual and teams of Soldiers operating in complex, dynamic environments. The results of the research will enable maximizing the effectiveness of Soldiers and their equipment for mission success. The aspects of human factors that will be studied include sensing, perceptual and cognitive processes, ergonomics, biomechanics and the tools and methodologies required to manage interaction within these areas and within the Soldiers' combat environment. Research is focused on decision-making; human robotic interaction; crew station design; improving Soldier performance under stressful conditions such as time pressure, information overload, information uncertainty, fatigue, on-the-move and geographic dispersion; and enhancing human performance modeling tools (project H70).

Work in this PE complements, and is fully coordinated with, efforts in PE 0602601A (Combat Vehicle and Automotive Advanced Technology), PE 0602786A (Warfighter Technology), PE 0602120A (Sensors and Electronic Survivability), PE 0602784A (Military Engineering Technology), PE 0602783A (Computer and Software Technology), PE 0602308A (Advanced Concepts and Simulation), PE 0602785 (Manpower/Personnel/Training Technology), PE 0603005A (Combat Vehicle and Automotive Technology), PE 0603710A (Night Vision Advanced Technology), PE 0603015A (Next Generation Training and Simulation), and PE 0603007A (Manpower, Personnel, and Training Advanced Technology).

Project J21 funds Congressional interest item.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Army Research Laboratory (ARL), Aberdeen Proving Ground, MD.

A. Mission Description and Budget Item Justification

The objective of this project is applied research on human factors to maximize the effectiveness of Soldiers in concert with their equipment. The resulting data are the basis for weapon systems and equipment design standards, guidelines, handbooks, and Soldier training as well as manpower requirements to improve equipment operation and maintenance. Application of this research will yield reduced workload, fewer errors, enhanced Soldier protection, user acceptance, and allows the Soldier to extract the maximum performance from the equipment.

Major efforts in this project include research to identify sources of stress, potential stress moderators, intervention methods, adaptive learning, support information technology to reduce uncertainty and improve decision quality for leaders as well as teams engaged in Command and Control (C2) planning and execution; enhancement of human performance modeling tools to optimize Soldier machine interactions and the collection of empirical data on human perception (vision and hearing) to support the development and validation of human as well as system performance models; investigations on the effects on Soldier performance from integration of advanced concepts in crew stations designs; identification, assessment, and mitigation of the effects of vehicle motion on Soldier performance; investigations to determine interface design solutions for brigade combat team (BCT) information systems that enhance situational understanding and decision cycle performance; identification and quantification of human performance measures and methods to address future warrior performance issues; and improvement of human robotic interaction (HRI) in a full mission context.

Work in this project is conducted in cooperation with the Tank Automotive Research, Development, and Engineering Center (TARDEC); Natick Soldier Research, Development, and Engineering Center (NSRDEC); Communications-Electronics Research, Development, and Engineering Center (CERDEC); Human Research and Engineering Directorate (HRED), Simulation and Training Technology Center (STTC); Engineer Research and Development Center (ERDC); Army Research Institute for the Behavioral and Social Sciences (ARI); and Army Materiel Systems Analysis Activity (AMSAA).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work is performed by the Army Research Laboratory (ARL), Aberdeen, MD.

A. Mission Description and Budget Item Justification

This program element (PE) investigates and evaluates enabling technologies that support the long-term sustainment of Army training and testing activities by improving the Army's ability to comply with requirements mandated by federal, state and local environmental/health laws and reducing the cost of this compliance. This program develops enabling technologies to decontaminate or neutralize Army-unique hazardous and toxic wastes at sites containing waste ammunition, explosives, heavy metals, propellants, smokes, chemical munitions, and other organic contaminants (Project 048); as well as technology to avoid the potential for future hazardous waste problems (Project 835), by reducing hazardous waste generation through process modification and control, materials recycling and substitution (Project 895). This program develops technologies to predict and mitigate range and maneuver constraints associated with current and emerging weapon systems, doctrine, and regulations (Project 896).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, the Army Science and Technology Master Plan, and supports the Army Strategy for the Environment.

Technologies developed in this PE are transitioned to PE 0603728A (Environmental Quality Technology Demonstrations).

Work in this PE is performed by the US Army Engineer Research and Development Center, Vicksburg, MS, and the US Army Research, Development and Engineering Command, Aberdeen Proving Ground, MD.

Project F355 funds Congressional Interest Items.

A. Mission Description and Budget Item Justification

This program element (PE) designs and develops technologies to enable the Army to reduce or eliminate environmental impacts both in the United States and abroad. These technologies reduce the impact of legal and regulatory environmental restrictions on installation facilities, training and testing lands and ranges, as well as provide a means to avoid fines and facility shutdowns within the United States and reduce environmental impacts to the Warfighter abroad. New and innovative technologies are essential for the effective control and reduction of military unique hazardous and non-hazardous wastes on military installations and associated with contingency operations bases worldwide. Efforts focus on the impacts of new materiel that will enter the Army inventory within the next decade and beyond. This project focuses on developing sustainable environmental protection technologies that help the Army maintain environmental compliance for sources of industrial pollution such as production facilities, facility contamination, and other waste streams. Efforts abroad include a focus on designing and developing technologies for deployed forces with environmentally safe, operationally enhanced and cost effective technologies and/or processes to achieve maximum diversion, minimization, or volume reduction of base camp and field waste. Additional work is focused on environmental risk assessment for installations associated with noise, air quality and carbon footprint.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, the Army Science and Technology Master Plan, and supports the Army Strategy for the Environment.

Work in this project is performed by the US Army Engineer Research and Development Center, Vicksburg, MS.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Sustainable Ranges and Lands Research and Development	3.080	3.186	2.653
Description: This effort supports management of operations on ranges and training lands with the intent to reduce constraints and restrictions. Technologies are targeted both toward solutions for environmental compliance and associated requirements, as well as solutions that will enhance training and testing operations.			
FY 2010 Accomplishments:			
Developed physiologically relevant chip/organ response on micro-fluidic sensing platforms for real-time water analysis for heavy metals (lead), anionic contaminants (perchlorate), and water toxins; completed evaluation of anaerobic fluidized bed reactor and zero valent iron treatment reduction technologies to reduce or eliminate environmental impacts from selective insensitive munitions processing residues through a bacterial process allowing the carbon and nitrogen to be recycled in natural, aerobic

A. Mission Description and Budget Item Justification

This program element (PE) investigates a quantitative means to determine the environmental and human health effects resulting from exposure to explosives, propellants, smokes, and products containing nanomaterials produced or used in Army industrial, field, and battlefield operations or disposed of through past activities. The end results of this research include: determination of acceptable contaminant concentration levels for residual munitions constituents (MCs) and munitions and explosives of concern that minimize adverse effects on the environment and human health and the development of methods that guide the design of nanomaterials such that adverse effects on human health or the environment are minimized in their designed state and when they enter the environment where they may break down. New research in toxicogenomics, nanomaterial technologies, computational/molecular modeling tools for toxicity and exposure assessment; impacts of climate change on biological processes; and attributes of sustainable energy production further reduces the uncertainty associated with both the probability of exposure and the ultimate effect if exposed. Interim products are US Environmental Protection Agency approved health advisories and criteria documents to be used in risk assessment procedures. The Army uses these criteria during negotiations with regulatory officials to set scientifically and economically appropriate cleanup and discharge limits at Army installations.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, the Army Science and Technology Master Plan, and supports the Army Strategy for the Environment.

Work in this project is performed by the US Army Engineer Research and Development Center, Vicksburg, MS.

A. Mission Description and Budget Item Justification

The program element (PE) develops pollution prevention technologies required to reduce/eliminate the environmental footprint resulting from the manufacture, maintenance, use and surveillance of Army ordnance and other weapon systems. This project researches and develops revolutionary technologies to eliminate or significantly reduce the environmental impacts that threaten the sustainment of production and maintenance facilities, training ranges and operational areas. The project supports the transformation of the Army by ensuring that advanced energetic materials required for high-performance munitions (gun, rocket, missile propulsion systems, and warhead explosives) are devised to meet weapons lethality/survivability stretch goals in parallel with, and in compliance to, foreseeable sustainment requirements. Specific technology thrusts include environmentally-benign explosives developed with computer modeling using Department of Defense high-performance computing resources; novel energetics that capitalize on the unique behavior of nano-scale structures; chemically engineered explosive and propellant formulations produced with minimal environmental waste, long-storage lifetime, rapid/benign environmental degradation properties, and efficient extraction and reuse; and fuses, pyrotechnics, and initiators that are free from toxic chemicals. Other focus areas include base camp energy reduction initiatives, elimination of waste streams in contingency operations and toxic metal reductions from surface finishing processes.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, the Army Science and Technology Master Plan, and supports the Army Strategy for the Environment.

Technologies developed in this project are fully coordinated and complementary to PE 0603728A, Project 025.

Work in this project is performed by the Research, Development, and Engineering Command's, the Army Research Laboratory, Aberdeen Proving Ground, MD, the Armaments Research, Development, and Engineering Center, Picatinny Arsenal, NJ, and the Aviation and Missile Research, Development, and Engineering Center, Huntsville, AL.

A. Mission Description and Budget Item Justification

This program element (PE) investigates technologies for environmental risk assessment, analysis, monitoring, modeling, and mitigation to support sustainable use of Army facilities, training lands, firing ranges, and airspace to reduce or eliminate environmental constraints to military missions. This project provides the Army the technical capability to manage, protect, and improve the biophysical characteristics of training and testing areas needed for realistic ranges and training lands. Technologies within this project enable users to match mission events and training schedules with the resource capabilities of specific land areas and understand how the use of those resources effect mission support and environmental compliance. The project investigates, designs, and develops novel methods and technologies to restore lands damaged during training activities and allow sustained use of installation facilities and training land resources. The project supports readiness and full use of training lands through development of threatened and endangered species monitoring technology and management technologies for species at risk. The project also designs and develops tools and technologies to avoid training restrictions and reduce constraints on training lands associated with invasive species and potential impacts from climate change.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, the Army Science and Technology Master Plan, and supports the Army Strategy for the Environment.

Work in this project is performed by the US Army Engineer Research and Development Center, Vicksburg, MS.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Threatened and Endangered Species (TES) Management to Reduce Operational Constraints Description: This effort develops detection techniques and models to understand multi-species population and manage threatened and endangered species at risk at Army training lands. FY 2010 Accomplishments: Completed development of detection techniques, multi-species population and risk prediction models and also understanding of advanced genetic methods to manage species at risk; this research assists the Army in reducing the number of future listed species and their associated constraints on military training.	1.532	-	-
Title: Predictive Risk Assessment and Management for Army Ranges and Training Lands Description: This effort develops technologies to minimize training land/natural resource conflicts for sustained mission support.	4.184	5.458	4.550

A. Mission Description and Budget Item Justification

This program element (PE) researches and develops communications technologies, command and control (C2), and electronics systems and subsystems that provide the Army with enhanced capabilities for secure, mobile, networked communications, assured information delivery, and presentation of information that enables decision-making. Commercial technologies are continuously investigated and leveraged where possible. Project 779 researches and develops technologies that enable management of information across the tactical and strategic battle space; provide automated cognitive reasoning and decision making; and allow timely distribution, display, and use of C2 data on Army platforms. Project H92 supports research in technologies which potentially allow field commanders to communicate on-the-move to/from virtually any location, through a seamless, secure, self-organizing, self-healing, network. Project TR9 funds congressional special interest efforts.

Work in this PE is complimentary of PE 0602705A (Electronics and Electronic Devices), PE 0603008A (Electronic Warfare Advanced Technology), and PE 0603772A (Advanced Tactical Computer Science and Sensor Technology), and is fully coordinated with PE 0602120A, (Sensors and Electronic Survivability), PE 0602783A (Computer and Software Technology), and PE 0602874A (Advanced Concepts and Simulation).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this PE is performed by the Army Research, Development, and Engineering Command (RDECOM), Communications -Electronics Research, Development, and Engineering Center (CERDEC), Fort Monmouth, NJ and Aberdeen Proving Ground, MD.

A. Mission Description and Budget Item Justification

This project researches technologies that enable commanders at all echelons to have better and more timely information and allows them to execute mission command from anywhere on the battlefield. Emphasis is on data management and automated analysis to provide course-of-action determination, mission planning and rehearsal, mission execution monitoring and re-planning, and precision positioning (pos) and navigation (nav). This project researches technologies that support multi-modal man-machine interactive technologies, battle space visualization, positioning and navigation in degraded environments (poor Global Positioning System (GPS) performance), automated cognitive decision aids, real-time collaborative tactical planning tools, data transfer, distributed data bases, open system architectures, service oriented architecture (SOA), and integration concepts which contribute to more mobile operations.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Army Research, Development, and Engineering Command (RDECOM), Communications - Electronics Research, Development, and Engineering Center (CERDEC), Fort Monmouth, NJ and Aberdeen Proving Ground, MD.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Battle Space Awareness and Positioning	1.776	1.800	2.152
Description: This effort investigates pos, nav and tracking sensor/integration technologies to provide position, velocity, and time information to support operational and training requirements, especially in hostile electro-magnetic interference and other radio frequency (RF) degraded/denied environments. Work being accomplished under PE 0603772A/project 101 compliments this effort.			
FY 2010 Accomplishments: Fabricated advanced pos/nav sensors, especially those that exploit the synergy between communications and position, such as RF ranging and network-assisted navigation for operation in GPS-denied environments.			
FY 2011 Plans: Evaluate candidate pos/nav sensors including micro-electrical mechanical and vision based sensors, evaluate integration techniques and navigation enhancing radio technologies for improved urban and indoor position performance.			
FY 2012 Plans:

A. Mission Description and Budget Item Justification

This project investigates, develops and applies advanced communications and network technologies by leveraging and adapting commercial technology to the maximum extent possible and focusing research efforts on emerging technology areas (e.g., mobile radio-based infrastructures, cyber security in narrowband environments, multiband on-the-move (OTM) transmit and receive antennas, adaptive protocols, and low probability-of-interception/low probability of detection waveforms).

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Army Research, Development, and Engineering Command (RDECOM), Communications-Electronics Research, Development, and Engineering Center (CERDEC), Fort Monmouth, NJ and Aberdeen Proving Ground, MD.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
<p>Title: Antenna Technologies</p> <p>Description: This effort fabricates and assesses low cost, power efficient, directional antenna technologies for terrestrial, airborne, and tactical satellite ground terminals to enable them to operate OTM over multiple frequency bands; and further investigates armor embedded antenna technologies. Work being accomplished under PE 0603008A/project TR1 compliments this effort.</p> <p>FY 2010 Accomplishments: Assessed C/Ku directional antenna and integrated platform feed and evolutionary aperture design to reduce antenna profile and cost; developed multi-beam low profile electronically steered Ka/Q band SATCOM OTM antenna components.</p> <p>FY 2011 Plans: Complete K/Ka/Q multi-beam low profile electronically steered SATCOM components and aperture development; integrate the SATCOM aperture with a drive and tracking system; develop single package Ka/Q band integrated power amplifiers; develop a blue force tracking (BFT) SATCOM antenna and modem architecture; investigate meta-materials for miniaturized antenna technologies; develop conformal antenna systems for ground and air platforms</p> <p>FY 2012 Plans: Will complete integrated K/Ka/Q band low profile electronically steered SATCOM antenna; will integrate single package Ka/Q band integrated power amplifier into the K/Ka/Q band SATCOM antenna; will complete development of blue force tracking</p>	4.130	5.703	6.394

A. Mission Description and Budget Item Justification

The objective of this program element (PE) is to conduct applied research that would enable enhanced understanding and accelerate the decision cycle time for commanders and leaders operating in a mobile, dispersed, highly networked environment. This PE supports research on information and communications technology (project Y10).

Work in this PE complements and is fully coordinated with efforts in PE 0602705A (Electronics and Electronic Devices), 0602716A (Human Factors Engineering Technology), PE 0602782A (Command, Control, Communications Technology), PE 0603772A (Advanced Tactical Computer Science and Sensor Technology), and PE 0603008A (Command, Control, Communications Advanced Technology).

Project Y11 funds Congressional Interest Items.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Army Research Laboratory (ARL) at the Adelphi and Aberdeen Proving Ground, MD locations.

A. Mission Description and Budget Item Justification

The objective of this project is to conduct applied research in information and communications processing technologies to automate the delivery of local/global information for decision making (planning, rehearsal, and execution) so that it is synchronized, parallel and real-time; and devise communication/network technologies to enable synchronization of secure data/information from humans to humans, humans to computers, computers to humans, and reduce dependence on mouse and keyboard versus other modes of computer interaction. This is the key to enabling enhanced understanding and for accelerating the decision cycle time for commanders and leaders operating in mobile, dispersed, highly networked environment envisioned for the future force.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Army Research Laboratory (ARL), Adelphi and Aberdeen Proving Ground, MD.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Information Processing	1.084	1.160	1.191
Description: Enhance information processing techniques in order to inform and protect the force from imminent threats. Develop user directed fusion techniques that, when combined with methods developed at the Communications-Electronics Research, Development, and Engineering Center, enable semi-automated fusion to improve the completeness and timeliness of decision-making in command and control (C2) operations. The integrated technology will be used to support a Distributed Common Ground Station-Army (DCGS-A) architecture (an integrated architecture of all ground/surface systems) and for future force assessment.			
FY 2010 Accomplishments: Evaluated measures to mine relevant information from social network information sources and augment that information with data from local (sensor) assets for improved understanding of the human/terrain battlefield interactions.			
FY 2011 Plans:

APPROPRIATION/BUDGET ACTIVITY 2040: <i>Research, Development, Test & Evaluation, Army</i> BA 2: <i>Applied Research</i>	R-1 ITEM NOMENCLATURE PE 0602783A: <i>COMPUTER AND SOFTWARE TECHNOLOGY</i>	PROJECT Y10: <i>COMPUTER/INFO SCI TECH</i>		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2010	FY 2011	FY 2012
Investigate the concept of social network exploitation and its relationship to communication and information network domains in collaboration with the Network Sciences International Technology Alliance (ITA); and investigate improved social network analysis tools, interfaces, and visualization routines for Army intelligence. FY 2012 Plans: Will extend these techniques to parallel architectures/algorithms and evaluate them in relevant tactical exercises, like Command, Control, Communications, Computers, Intelligence, Surveillance and Reconnaissance (C4ISR) On-the-Move.				
Title: Information Assurance Description: Conduct applied research on tactical information protection technologies for agent-based vulnerability assessment over wireless bandwidth constrained links and security infrastructures for sensor networks. FY 2010 Accomplishments: Evaluated the wireless intrusion detection system (IDS) system performance in terms of network overhead (i.e., bandwidth, energy and latency). FY 2011 Plans: Evaluate secure information flow techniques in mobile tactical networks via simulation/emulation to enhance the reliable delivery of information to the Soldier. FY 2012 Plans: Will continue evaluating techniques for trading off IDS system performance and overall network performance in terms of network security metrics.		1.113	1.089	1.136
Title: Information Exchange Description: Investigate techniques to enable automated integration of global and local information, allowing tactical assets to cooperatively share sensed events within a wireless distributed fusion environment in order to inform the force of relevant events. FY 2010 Accomplishments: Evaluated data structures for policy-based information exchange (administrative approach used to simplify network management by establishing rules/guidelines to deal with situations that are likely to occur) and integrated information assurance modules to support the evaluation in tactically relevant environments. FY 2011 Plans:		1.145	1.185	1.217

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2010	FY 2011	FY 2012
Design network service interfaces, refine policy-based information exchange structures, and conduct assessments on policy-based exchange software in an operational command, control, communications, computer, intelligence, surveillance and reconnaissance (C4ISR) On-the-Move environment. FY 2012 Plans: Will extend experiments to social network analysis, fusion and collection techniques in this environment, and develop metrics for assessing their overall effectiveness within the DCGS-A Cloud architecture.				
Title: Language Translation Description: Conduct research into techniques for developing the underlying computational multilingual software framework to enable commanders and troops to bridge language barriers in order to counter adversaries and collaborate with allies. FY 2010 Accomplishments: Assessed the impact of pre-processing tools on downstream processes like named entity extraction, machine translation, and summarization that are critical to the Intelligence Community. FY 2011 Plans: Integrate new optical character recognition/machine translation (OCR/MT) evaluation tools and expand the testbed to accommodate select Net Centric Enterprise Services; jointly evaluate/modify/transition best-of-breed language processing tools with PM-Sequoyah (machine foreign language translation system) for the Army and Intelligence Communities. FY 2012 Plans: Will integrate additional tools to automate development of new OCR/MT rapidly from prepared data and develop/evaluate use of mobile applications for language translation functions.		0.551	0.580	0.609
Title: Network Theory Description: Statistical based methods for studying networks to support theory development in network science; evaluate a basis to validate or invalidate theoretical results, identify gaps between theory prediction and field performance; evaluate verification of mobility, channel, and topology models, and of convergence of adaptive protocols; guide development of the theoretical effort by providing a basis for refining models and assumptions. The long-term goal is to develop a real-time adaptive statistical analysis system that is coupled to a monitoring system that can infer/learn global network behavior and to a control system that controls local behavior so as to predictively improve performance, while ensuring the stability of the overall system. FY 2010 Accomplishments:		1.625	1.742	1.817

A. Mission Description and Budget Item Justification

This program element (PE) investigates, evaluates, and matures military engineering technologies for geospatial, atmospheric, and weather characterization and modeling; force protection; force projection; and sustainable, cost efficient and resilient facilities and bases. Research supports special requirements for battlefield visualization, tactical decision aids, weather intelligence products, and capabilities to exploit space assets. Results are tailored to support the materiel development, testing, and operations communities in evaluating the impacts of weather, terrain, and atmospheric obscurants on military materiel and operations (Project 855 and H71). Major research efforts also focus on advanced technologies for adaptive and expedient force protection across the range of military operations; overcoming battlespace gaps; rapid port enhancement; mobility, survivability, and weapons effects in urban terrain modeling and simulation (Project T40). Research efforts to develop technology-enabled capabilities for deployable force protection to support troops operating at remote bases or integrated with local communities are performed in projects T40 and T41 starting in FY11. Facilities engineering efforts include simulation of infrastructure capabilities for force projection, protection, and readiness to improve the efficiency and cost effectiveness of the training, readiness, and force projection missions in garrison; force sustainment missions in theaters of operation; and critical infrastructure interdependencies (Project T41 and T45). Research in this PE also focuses on impacts of the battlespace environment on platforms, sensors, personnel, and systems (Project T42).

A. Mission Description and Budget Item Justification

This program element (PE) investigates, evaluates, and matures military engineering technologies. This effort provides research for managing, transforming, updating, improving, and disseminating extremely large volumes of terrain and weather effects data at, or near, real-time and dynamic analysis and reasoning of this data to enable future force command and control systems by providing superior knowledge of the battlespace terrain and environment. Work in this project significantly enhances the Army's spatial-temporal data analysis, management and dissemination capabilities. Efforts include developing logical and conceptual models to support Civil Military Operations (CMO), and examining unification of Geospatial Intelligence with environmental and emerging cultural geographical information requirements associated with CMO by extending geospatial tools support to military decision making within stability operation environment.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

This work is fully coordinated with and complementary to efforts funded in PE 0601102A, Project 52C and PE 0602784A, Project H71.

The work in this project is performed by the US Army Engineer Research and Development Center, Vicksburg, MS.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Terrestrial Data Generation	2.591	-	-
Description: This effort minimizes or eliminates the dramatic effects of dynamically changing terrain states on sensing and maneuver operations conducted by the Army; and provides effective decision-making tools such as models, simulations and mission planning and also rehearsal factors to accurately predict the state of the ground, near-surface atmospheric conditions, and system performance in complex environments.			
FY 2010 Accomplishments: Empirically tested optical reporting, or signal emission in the presence of certain target molecules, of remote sensors. In FY11, this research is conducted in task Terrain Analysis for Signal and Signature Phenomenology.

A. Mission Description and Budget Item Justification

This program element (PE) investigates, evaluates, and matures military engineering technologies. The objective of this project is to perform applied research and development of tactical weather and atmospheric effects/impacts algorithms and for their integration into battlefield information products. The Army requires capabilities to enhance battlefield commanders and Soldiers decision making based on knowledge of tactical weather data and other environmental impacts. The weather intelligence data must not only be accurate and timely, but also be distributed down to the lowest levels of command, (e.g., individual Soldier). Technologies include high-resolution, local assessments and forecasts of meteorological conditions in near real time including effects of urban and mountainous terrain; analytical tools to assess the impact of the atmosphere to optimize system performance and operations planning; and advanced atmospheric sensing applications to characterize and mitigate wind and turbulence in complex terrain. It provides detailed model applications for various effects of the atmosphere on electro-optical and acoustic target detection, location, and identification. This project develops both physics-based decision aids and rule-based decision support systems for assessing the impacts of weather/atmosphere across a spectrum of friendly and threat weapons systems, sensors, platforms, and operations. The technology can be applied to mission planning and execution, battlefield visualization, reconnaissance surveillance and target acquisition, route planning to maximize stealth and efficiency, web enabled tactical decision aids, and also modeling of environmental impacts for combat simulations and war games. This project supports the future Army through research and development of novel environmental methods and applications that support echelons at Brigade and below (down to the individual Soldier). Products include atmospheric impacts on Army systems and personnel, an Army scale on-scene weather sensing and prediction capability, optical imaging and acoustic tools for automatic target recognition, optical imaging tools for improvised explosive device (IED)/anomaly detection, and physics-based acoustic tools for helicopter collision avoidance and improved source localization.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

This work transitions technologies to the Project Manager for Target Identification and Meteorological Systems for field artillery systems, and to the Department of Defense weather and operations modeling community, and the Program Manager, Distributed Common Ground System-Army (DCGS-A), the Joint Improvised Explosive Device (IED) Defeat Organization, the Program Executive Office Aviation, the Product Manager, Tactical Airspace Integration System, and Project Manager for Robotics and Unmanned Sensors.

Work in this project is performed by the Army Research Laboratory located at Adelphi, MD/White Sands Missile Range, NM.

A. Mission Description and Budget Item Justification

This program element (PE) investigates, evaluates, and develops technologies for adaptive and expedient force protection across the range of military operations; for overcoming battlespace gaps (such as cliffs, ravines and other natural obstacles) through prediction, definition, avoidance, or defeat of the gaps; investigates technologies for rapid port enhancement; for scalable weapons effects; and for high-resolution representation of near-surface terrain and environment for use with sensor models for things such as target recognition and unmanned ground systems (UGS). This research supports development of the future force by providing physics-based representations of mobility, obstacle and barrier placement, survivability, and weapons effects in urban terrain modeling and simulation. Additionally, the project develops and assesses technologies that increase the survivability of critical assets from conventional and terrorist weapons, and maneuver support of deployed forces, while reducing their logistical footprint. Work in this project starting in FY12 in deployable force protection (DFP) supports overcoming critical capability gaps for protecting troops operating at smaller bases that are remote or integrated in with local communities.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the US Army Engineer Research and Development Center, Vicksburg, MS.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Adaptive Protection	8.297	10.645	6.483
Description: This effort develops, evaluates, and validates technologies that address Future Force protection capability shortfalls; and where feasible, enhance Current Force capabilities through spiral development technology insertions.			
FY 2010 Accomplishments: Developed interim lightweight rapidly erected protective systems for use inside and outside base perimeters to defeat emerging weapons effects; developed the capability to accurately predict vehicle loadings due to subsurface explosive detonations; and provided these models to armor/platform designers to increase the survivability of the current and future tactical wheeled vehicle fleet.			
FY 2011 Plans:			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2012 Army		DATE: February 2011		
APPROPRIATION/BUDGET ACTIVITY 2040: <i>Research, Development, Test & Evaluation, Army</i> BA 2: <i>Applied Research</i>	R-1 ITEM NOMENCLATURE PE 0602784A: <i>MILITARY ENGINEERING TECHNOLOGY</i>	PROJECT T40: <i>MOB/WPNS EFF TECH</i>		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2010	FY 2011	FY 2012
<p>Design and develop a computational protection testbed for validated high-performance modeling to predict and evaluate protective material and system response to blast and ballistic loads. Develop and evaluate force protection technologies for use in remote outposts or in other expeditionary modes, where there is little access to engineering equipment and explore options for use of organic materials in conjunction with light-weight, blast and penetration resistant composite materials and detection capabilities. This work is performed in collaboration with PE 0603005A/221 and activities in PE 0602618A and PE 0602105A.</p> <p>FY 2012 Plans: Will investigate and validate novel layered protective systems to include overhead protection from direct and indirect fire that must defeat large-caliber rockets, vehicle borne-improvised explosive devices (IEDs), human borne-IEDs, and shoulder-fired rockets; will mature the numerical modeling capability of ground vehicle protective schemes against surface and buried threats by improving coupling between the blast events, vehicles, and occupants. This work will be performed in collaboration with PE 0603005A/221 and activities in PE 0602618A and PE 0602105A.</p>				
<p>Title: Austere Entry and Maneuver</p> <p>Description: The objective of this research project is to develop and demonstrate technologies that address Future Force enable theater access strategic responsiveness capability shortfalls, and where feasible, enhance Current Force capabilities through spiral development technology insertions.</p> <p>FY 2011 Plans: Provide modeling solutions of physical and operational conditions (i.e. wetland, mudflats, or shallow rivers) that provide improved logistics and force projection capability for austere entry and maneuver.</p> <p>FY 2012 Plans: Will design and begin development of a sea-land intermodal mobility bridge for ship to shore transit of heavy military equipment and ground vehicles as well as heavy-lift expedient landing platforms and surfaces for aircraft.</p>		-	1.036	2.000
<p>Title: Scalable Weapons Effects</p> <p>Description: This effort provides a prediction capability for effects from scalable, selectable, and adaptive weapons that can destroy target function and/or neutralize attributes while limiting damage to surrounding structures/personnel.</p> <p>FY 2010 Accomplishments: Investigated warhead technologies for rapid wall breaching that can create a man-sized hole in a double-reinforced concrete wall in a single step, reducing time on target and enhancing Soldier survivability; quantified damage to concrete, brick, and adobe walls due to prototype shoulder launched munitions impact; completed evaluations of multi-phase low-to-high order detonation-</p>		5.105	4.203	5.806

A. Mission Description and Budget Item Justification

This program element (PE) investigates and evaluates technologies and techniques to ensure sustainable, cost efficient and effective facilities and to achieve resilient and sustainable installation and base operations. The project focuses on facilities and operations technologies directly supporting training, readiness, force projection, force protection, homeland security, and forward base operations. Facility enhancement technologies contribute to cost reductions in the Army facility life cycle process (infrastructure planning, assessment, design, construction, revitalization, sustainment, and disposal), and the supporting installation operations. This work improves the ability of installations to support forces to meet transformation goals, improves designs for close battle training facilities, and enhances security of Soldiers, families, and civilians. Technologies evolving from this work include integrated planning and design tools for US facilities and forward bases, models predicting water dispersed contaminant effects on facilities and occupants; sustainable facility and base management; collaborative decision support tools; and advanced materials. In addition, technologies from this work will support analysis of socio-cultural and facility issues in forward base operations, including urban environments.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the US Army Engineer Research and Development Center, Vicksburg, MS. The work in deployable force protection is coordinated with the US Army Research Development and Engineering Command, the Defense Advanced Research Projects Agency and the Services.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Multi-functional materials in support of Defeat of Emerging Adaptive Threats (DEFEAT)	2.796	2.860	0.900
Description: This effort assesses and develops self healing technologies; evaluates protective systems; and assesses the use of novel materials in multi-functional structural protection.			
FY 2010 Accomplishments: Conducted assessment of material enhancement using self healing technologies; began development of micro-scale design of high-performance carbon nanotube-composite materials.			
FY 2011 Plans:

A. Mission Description and Budget Item Justification

This program element (PE) investigates and evaluates the physical environment's effect on personnel, platforms, sensors, and systems in order to develop improved tactics, techniques, procedures, and plans that ensure information superiority, situational awareness, and force projection. Specifically, this project seeks solutions for minimizing or eliminating the adverse effects of dynamically changing terrain states on sensing capabilities, engineer construction, and tactical maneuver conducted by the Army. To achieve this, effective decision-making tools such as models, simulations, and mission planning and rehearsal factors are required that accurately predict the state of the ground, near-surface atmospheric conditions, and system performance in complex environments.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the US Army Engineer Research and Development Center, Vicksburg, MS.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Terrain State	1.770	1.426	2.015
Description: This effort provides Warfighters with an accurate and timely understanding of the battlespace environment's effect on personnel, platforms, sensors, and systems in order to develop improved tactics, techniques, procedures, and plans that ensure information superiority, situational awareness, and force projection. Specifically, this project seeks solutions for minimizing or eliminating the adverse effects of dynamically changing terrain states on sensing capabilities, engineer construction, and tactical maneuver conducted by the Army.			
FY 2010 Accomplishments: Developed algorithms to interpret local terrain characteristics from on-board vehicle sensors (tactile and stand-off) through real-time terrain characterization for on-board mission decision logic to assure the tactical mobility of manned and unmanned ground systems on complex terrain.			
FY 2011 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)				FY 2010	FY 2011	FY 2012
Design weather effects physical security sensor planning tool integrated with passive protection systems. FY 2012 Plans: Will incorporate an optimal sensor placement and selection model including stationary and moving surveillance platforms into the Environmental Awareness for Sensor and Emitter Employment model supporting integration of many different sensors in the battlespace; develop a framework to achieve effective persistent monitoring of targets of interest, ground and airborne, providing timely knowledge of multi-modality sensor performance in dynamic complex weather-affected terrain and adverse weather conditions.						
Title: Signature Physics Description: This effort investigates the battlespace environment effect on personnel, platforms, sensors, and systems in order to develop improved tactics, techniques, procedures, and plans that ensure information superiority, situational awareness, and force projection. Specifically, this project seeks solutions for minimizing or eliminating the adverse effects of dynamically changing terrain states on sensing capabilities, engineer construction, and tactical maneuver conducted by the Army. FY 2010 Accomplishments: Built geo-precise software tools incorporating awareness about the physical environment (known and unknown) to optimize sensor emplacement and selection of sensor asset mixes. FY 2011 Plans: Define normal and anomalous sensor data features (statistical properties) as a function of the geospatial and socio-cultural context; leverage the Warfighter's understanding of important features and contextual cues; and develop street-level simulation of sensor data across a wide range of modalities and urban terrain contexts to develop signal propagation rules for fusion and anomaly recognition. Develop re-usable, object-oriented, software tools for cross-modality sensor performance modeling, high-level fusion including operational environment context, and emplacement recommendations that can be readily incorporated into Army command and control and terrain analysis systems. FY 2012 Plans: Will design and develop random sampling approaches for uncertainties across multiple sensing modalities and establish quantifiable approaches for the value of increased terrain and weather resolution on signal propagation predictive skill; will develop an adequate definition of the soil biology as a function of prevailing conditions, such as soil-water potential and temperature that can be predicted or measured using stand-off techniques supporting emerging developments of bio-inspired persistent standoff sensing capabilities.				3.721	3.664	3.229

A. Mission Description and Budget Item Justification

This program element (PE) investigates and evaluates technologies necessary for secure, energy efficient, sustainable military installations, emphasizing energy and utility systems protection in response to evolving needs. Energy technologies and processes are also applied to the Army's industrial base to maintain its cost-effective readiness for munitions production, training, and in the theater of operations to reduce logistical footprint. This effort provides technologies to protect facility indoor air quality from contaminants such as mold, bacteria and viruses in work and living spaces as well as develops methods to optimize sustainable energy generation and use including integration of renewable energy resources and approaches for the reduction of carbon footprint. In addition, technologies from this work provide a better understanding of critical infrastructure interdependencies.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the US Army Engineer Research and Development Center, Vicksburg, MS.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Systems Response to Threats	2.437	1.701	-
Description: This effort investigates and validates technologies necessary for secure, energy efficient, sustainable military installations, emphasizing energy and utility systems protection from, and in response to, evolving threats such as chemical, biological and radiological attacks.			
FY 2010 Accomplishments: Predicted nanosensing complex stability under long term storage conditions that involved evaluating the stability of fluorescent nanoparticles, conjugated with antibodies, at various temperatures and in different environments.			
FY 2011 Plans: Evaluate sensing ability with encapsulation and re-suspension after freeze drying to assess improving the stability of the complex using chemical preservatives and encapsulation with silica.

A. Mission Description and Budget Item Justification

The objective of this program element (PE)/project is to conduct behavioral and social science applied research that provides non-materiel solutions to ensure that Soldiers can adapt and excel and improve the Army's capability to fully leverage advances in networks, systems, and technologies as they evolve. This research provides the scientific basis to recruit, select, assign, promote, educate, train, and retain Soldiers and leaders that comprise a ready and relevant Landpower capability. The human science applied research conducted in this program element provides knowledge-products, methods, techniques, and tools that will enable the Army to: select Soldiers who are predicted to perform well in future jobs; assign Soldiers to Military Occupational Specialties (MOS) and jobs that better match their skills and abilities; retain an effective career force through improved strategies and behavioral incentives to influence Soldiers to stay in the Army for longer periods of time; accelerate the development of leader critical thinking and interpersonal skills through virtual practice so that junior leaders are more adaptable and prepared for uncertain, rapidly changing missions; develop innovative training strategies for complex battle command skills in network-enabled environments; and design training tools for dismounted squad leadership and team maneuver with ground Soldier systems technologies. Additional research is focused on training techniques and procedures that make it easier for trainers and training developers to rapidly respond to changes in mission or operational requirements and provide a more synergistic training and education process (e.g., automated and improved diagnostics, coaching and mentoring, performance measures, and feedback methods). This program leverages efforts and coordinates research with a number of other Laboratories and Research, Development, and Engineering Centers including, the Simulation and Training Technology Center (STTC) and Army Research Laboratory - Human Research and Engineering Directorate (ARL-HRED) (PEs 0603015A, 0602308A and 0602716A), and the Communications-Electronics Research, Development, and Engineering Center (CERDEC). Research in this PE is related to and fully coordinated with efforts funded in PE 0603007A/project 792.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

This project is managed by the U.S. Army Research Institute for the Behavioral and Social Sciences (ARI), Arlington, VA.

A. Mission Description and Budget Item Justification

This program element (PE) investigates and develops technologies which improve Soldier and Small Combat Unit survivability, sustainability, mobility, combat effectiveness, and field quality of life. This PE supports the design, development, and improvement of components used for air delivery of personnel and cargo (project 283), combat clothing and personal equipment (including protective equipment such as personal armor, helmets and eye wear) (project H98) and combat rations and combat feeding equipment (project H99) and expeditionary base camps (VT4). Project E01 funds congressional special interest items. The projects in this PE adhere to Tri-Service Agreements on clothing, textiles, and food with coordination provided through the Cross Service Warfighter Equipment Board, the Soldier as a System Integrated Concepts Development Team, and the DoD Combat Feeding Research and Engineering Board.

Work in this PE is related to, and fully coordinated with, PE 0602105A (Materials Technology), PE 0602618A (Ballistics Technology), PE 0603001A (Warfighter Advanced Technology), PE 0602787A (Medical Technology Initiatives)0602716A (Human Factors Engineering Technology) and PE 0602784A (Military Engineering Technology)

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work is led, performed, and/or managed by the Natick Soldier Research, Development, and Engineering Center (NSRDEC), Natick, MA.

A. Mission Description and Budget Item Justification

This project researches, investigates and evaluates component technologies to enhance cargo and personnel airdrop capabilities for global precision delivery, rapid deployment, and insertion for force projection into hostile regions. Areas of emphasis include parachute technologies, parachutist injury reduction, precision offset aerial delivery, soft landing technologies, and airdrop simulation.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is led, performed and/or managed by the US Army Natick Soldier Research, Development and Engineering Center (NSRDEC), Natick, MA.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
<p>Title: Precision Aerial Delivery Enhancements</p> <p>Description: This effort investigates technologies for enhanced payload extraction and subsequent gliding capabilities, improves delivery accuracy of varying load weights, and investigates technologies for improved insertion safety and security for airborne personnel.</p> <p>FY 2010 Accomplishments: Researched and evaluated performance of height sensor technology, to include a radar height sensor to augment existing Sound Detection and Ranging (SODAR) height sensors; investigated and developed wireless advanced navigational aid and display technologies for Military Free Fall (MFF) applications.</p> <p>FY 2011 Plans: Research and evaluate performance of adaptive Guidance Navigation and Control (GN&C) software and wind sensor technology to incorporate into on-board airborne guidance unit (AGU) enabling wind updates to be transmitted to the AGU for parafoil flight pattern adjustment.</p> <p>FY 2012 Plans: Will explore aerial delivery concepts from rotary wing Army aircraft to provide a wider range of resupply capabilities to include automatic helicopter sling load (SL) hook up/drop-off , will analyze human systems performance limits and injury mechanisms</p>	1.838	1.770	2.369

A. Mission Description and Budget Item Justification

This project investigates and evaluates components and materials that have potential to enhance Soldier survivability from combat threats (flame and thermal threats, blast and ballistic threats, and lasers) and the field environment (e.g., cold, heat, wet) to increase operational effectiveness while decreasing the Soldier's cognitive and physical burden. Included are technologies and novel materials related to personnel armor, helmets, hearing protection, eyewear, and protective inserts for shelters. In addition, this project supports the development and refinement of essential analytic tools needed to predict and/or assess the combat effectiveness of next generation Soldier systems with a focus on network centric warfare technologies and human science investigation to identify and develop methods to assess human cognitive responses to sensory, physical, cognitive, and affective stimuli and stressors.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work is led, performed and/or managed by the Natick Soldier Research, Development, and Engineering Center (NSRDEC), Natick, MA.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Ballistic and Blast Protection for the Individual Soldier	5.621	5.594	7.207
Description: This effort focuses on material modeling, novel materials, and component designs to protect Soldiers against ballistic and blast threats. This effort is fully coordinated with PE 0602787/Project FH2, Project VB3 and Project 874 (Medical Technology).			
FY 2010 Accomplishments: Validated enhancements to survivability modeling tool (including the Integrated Casualty Estimation Methods model) for personnel ballistic and blast protection systems development. Developed improved ballistic body armor plate designs based on medical forensic data and 3D body scans. Completed ballistic experiments on selected materials configurations to obtain critical data for advancement of ballistic plate technology.			
FY 2011 Plans: Investigate and conduct trade analysis of parameters which could lead to lighter weight ballistic and blast protective systems for individuals and shelters; construct and evaluate initial soft armor and composite armor components using emerging materials (from PE 0602105A/project H84 or others) and geometry data from the Integrated Casualty Estimation Method modeling tool;

A. Mission Description and Budget Item Justification

This project investigates, develops and evaluates novel ration packaging, combat feeding equipment/systems and advanced food processing technologies to prolong shelf-life. This project also investigates technologies that detect food safety hazards on the battlefield and enhances quality, nutritional content and the variety of food items in military rations. Efforts funded in this project support all Military Services, the Special Operations Command, and the Defense Logistics Agency. The Army serves as Executive Agent for this Department of Defense (DoD) program, with oversight and coordination provided by the DoD Combat Feeding Research and Engineering Board. Technologies developed within this effort transition to PE 0603001A/project C07 for maturation.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is led, performed, and/or managed by the US Army Natick Soldier Research, Development and Engineering Center (NSRDEC), Natick, MA, and this project has collaborative efforts with the US Army Research Institute for Environmental Medicine.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Combat Feeding Equipment Technologies	2.246	2.320	1.620
Description: This effort investigates equipment and energy technologies to enhance effectiveness and reduce logistics footprint of Joint Services field feeding operations in a wide range of environmental and operational contexts.			
FY 2010 Accomplishments: Developed technology concepts for a standard size container that extends the shelf life of semi-perishable rations in hot environments; designed and evaluated an off-grid pallet chiller with self-containing power supply for bottled water; and completed concept development of a flameless individual water heater.			
FY 2011 Plans: Develop recycling technology concepts for greywater (non-industrial wastewater) generated from field food sanitation systems for the Food Sanitation Center; and complete concept development of self-powered appliances with next generation high efficiency thermoelectric modules to reduce reliance on JP8.			
FY 2012 Plans: Will investigate innovative mission-specific, man portable feeding technologies; will evaluate high efficiency thermoelectric powered appliances to reduce reliance on JP8 and other power sources to operate kitchen appliances; will investigate novel

A. Mission Description and Budget Item Justification

This project matures and demonstrates fully integrated holistic expeditionary base camp (EBC) capabilities with mission-specific plug and play components, subsystems and modules designed to optimized manpower requirements, improve situational awareness, increase survivability, optimize habitation, reduce logistics footprint, enhance supportability and reduce cost. Expeditionary Base Camp (EBC) systems provide an operational capability for Small Combat Units (battalion and below) and Soldiers in varying environments which are rapidly deployable and re-locatable and require no Military Construction and limited materiel handing support. This project integrates mature technologies to create mission specific lab demonstrators and evaluates the performance capabilities using metrics and methodologies developed under PE 0602786//Project VT4.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is led, performed and/or managed by the US Army Natick Soldier Research, Development and Engineering Center (NSRDEC), Natick, MA and fully coordinated with PE 0602786A (Warfighter Technology), PE 0602784A and 0603734A (Military Engineering) PE 0603004A (Weapons and Munitions Advanced Technology), PE 0603005A (Combat Vehicle and Automotive Advanced Technology), PE 0603125A (Combating Terrorism Technology Development) and PE 0603772A (Advanced Tactical Computer Science and Sensor Technology).

A. Mission Description and Budget Item Justification

This program element (PE) supports application of knowledge gained through basic research to develop drugs, vaccines, medical devices, diagnostics, medical practices/procedures, and other preventive measures essential to the protection and sustainment of Warfighter health. Research is conducted in five principal areas:

UNCLASSIFIED

--	--

Project (VJ4) supports project funds research over a planned five-year period to examine the mental and behavioral health of Soldiers to counter suicidal behavior. This work will focus on advancing the understanding of the multiple determinants of suicidal behavior, psychopathology (study of the causes and nature of abnormal behavior), psychological resilience, and role functioning. Work on this project is being performed by the National Institute of Mental Health through extramural cooperative research grants in collaboration with the Department of the Army. This project is being coordinated with the Defense Health Program.

All medical applied research is conducted in compliance with US Food and Drug Administration (FDA) or Environmental Protection Agency (EPA) regulations. The FDA requires thorough testing in animals (referred to as preclinical testing) to assure safety and, where possible, effectiveness (i.e., efficacy) prior to approving controlled clinical trials where these early (previously unproven in humans) drugs, vaccines, and medical devices are tested in humans. These clinical trials are conducted in three phases (Phase 1, 2, and 3) to prove safety and effectiveness of the drug/vaccine/device for the targeted disease/condition. Each successive clinical trial includes more voluntary study subjects. This PE focuses on identifying candidate solutions on rese

A. Mission Description and Budget Item Justification

This project funds research to prevent and protect Soldiers from training and operational injuries, the development of mechanisms for detection of physiological and psychological health problems, the evaluation of hazards to head, neck, spine, eyes, and ears, the standards for rapid return-to-duty, and the determination of new methods to sustain and enhance performance across the operational spectrum. This research provides medical information important to the design and operational use of military systems, and this work forms the basis for behavioral, training, pharmacological (drug actions), and nutritional interventions.

The four main areas of study are:

- (1) Physiological Health
- (2) Environmental Health and Protection
- (3) Injury Prevention and Reduction
- (4) Psychological Health and Resilience

Promising efforts identified in this project are further matured under PE 0603002A, project MM3.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Walter Reed Army Institute of Research (WRAIR), Silver Spring, MD; US Army Research Institute of Environmental Medicine (USARIEM), Natick, MA; US Institute of Surgical Research (USAISR), Fort Sam Houston, TX; and the US Army Aeromedical Research Laboratory (USAARL), Fort Rucker, AL.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Environmental Health and Protection - Physiological Awareness Tools and Warrior Sustainment in Extreme Environments	1.961	2.379	3.567
Description: This effort evaluates remote monitoring of Soldier physiological status and mitigating/eliminating the effects of heat, cold, altitude and other environmental stressors on Soldier performance.			
FY 2010 Accomplishments:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2010	FY 2011	FY 2012
Employed hydration sensor technologies to conduct early device evaluations; determined the effectiveness of a 7- to 8-hour nighttime exposure to a normal-altitude, low-oxygen environment for high-altitude pre-acclimatization; evaluated current heat strain decision aid capabilities for potential future enhancement. FY 2011 Plans: Develop low-oxygen training guidelines based on analysis of low-oxygen exposure studies; perform biomedical modeling to define individual differences affecting heat regulation; develop methods and models to predict core temperature using identified thermal parameters. FY 2012 Plans: Will develop altitude acclimatization and work performance models for altitudes between 7,000 and 14,000 feet.				
Title: Physiological Health - Nutritional Sustainment and Fatigue Interventions Description: This effort evaluates methods for managing and controlling the effects of nutrition and fatigue on Soldier operational performance. FY 2010 Accomplishments: Demonstrated effectiveness of nutritional supplements for sustaining cognition during military operational stress; determined impact of nutritional supplements on enhancing post-exercise recovery; determined effectiveness of zinc supplements for reducing the incidence of diarrhea; developed models to study the relationship between hormonal regulation and eating behavior; evaluated individualized alertness and performance prediction model software for the Sleep Management System. FY 2011 Plans: Develop nutritional countermeasures (supplements taken to counter or offset injury or trauma) for diminished bone health in response to operational stress; define impact of micronutrient status on performance and immune function during military training; demonstrate protective effects of probiotics (dietary supplements) for sustaining digestive and immune function during operational stress; demonstrate effectiveness of nutritional supplements for promoting fat loss in overweight Warriors; conduct study to determine changes in sleep brain activity on Soldiers in theater; conduct a study to determine extent to which sleep duration impacts resilience/sensitivity to combat experiences. FY 2012 Plans: Will investigate whether there is any association between disturbances in nutritional health and the prevalence of Warfighter psychological disorders; will determine the impact of weight status on risk of musculoskeletal injury; will define the muscle		2.118	2.787	2.281

A. Mission Description and Budget Item Justification

This project funds applied research for medical countermeasures to naturally occurring infectious diseases that pose a significant threat to the operational effectiveness of forces deployed outside the United States. Effective preventive countermeasures (protective/therapeutic drugs and vaccines, insect repellents and traps) protect the force from disease and sustain operations by avoiding the need for evacuations from the theater of operations. Diseases of military importance are malaria, bacterial diarrhea, and viral diseases (e.g., dengue fever and hantavirus). In addition to countermeasures, this project funds development of improved diagnostic tools to facilitate early identification of infectious disease threats in an operational environment, informing Commanders of the need to institute preventive actions and improved medical care. Major goals are to integrate genomics (DNA-based) and proteomics (protein-based) as well as other new biotechnologies into the development of new concepts for new vaccine, drug, and diagnostics candidates.

Research conducted in this project focuses on the following five areas:

- (1) Drugs to Prevent/Treat Parasitic (symbiotic relationship between two organisms) Diseases
- (2) Vaccines for Preventing Malaria
- (3) Bacterial Threats
- (4) Diagnostics and Disease Transmission Control
- (5) Viral threats

For the development of drugs and biological products, studies in the laboratory and in animal models provide a proof-of-concept for these candidate products including safety, toxicity, and effectiveness, and are necessary to provide evidence to the US Food and Drug Administration (FDA) to justify approval for a product to enter into future human subject testing. Additional non-clinical studies are often needed in Applied Research even after candidate products enter into human testing during Advanced Technology Development, usually at the direction of the FDA, to assess potential safety issues. Drug and vaccine development bears high technical risk. Of those candidates identified as promising in initial screens, the vast majority are eliminated after additional safety, toxicity, and/or effectiveness testing. Similarly, vaccine candidates have a high failure rate, as animal testing may not be a good predictor of human response, and therefore candidate technologies/products are often eliminated after going into human trials. Because of this high failure rate, a continuing effort to identify other potential candidates to sustain a working pipeline of countermeasures is critical for replacing those products that fail in testing.

Work is managed by the US Army Medical Research and Materiel Command in coordination with the Naval Medical Research Center. The Army is responsible for programming and funding all DoD naturally occurring infectious disease research requirements, thereby precluding duplication of effort within the Military Departments.

Promising medical countermeasures identified in this project are further matured under PE 0603002A, project 810.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Walter Reed Army Institute of Research (WRAIR), Silver Spring, MD, and its overseas laboratories; the US Army Medical Research Institute of Infectious Diseases (USAMRIID), Fort Detrick, MD; and the Naval Medical Research Center (NMRC), Silver Spring, MD, and its overseas laboratories.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
<p>Title: Drugs to Prevent/Treat Parasitic Diseases (harmful effects on host by an infecting organism)</p> <p>Description: This effort conducts assessments and improves candidate drugs coming from the DoD discovery program and from other collaborations for prevention and treatment of malaria to counter the continuing spread of drug resistance to current drugs. Conducts assessments in animal models of currently available drugs for use against cutaneous leishmaniasis (a skin-based disease transmitted by sand flies). This program selects the most effective and safe candidates for continued development and possible clinical testing.</p> <p>FY 2010 Accomplishments: Optimized chemical compounds that have potential to be effective drugs against malaria and/or leishmaniasis, including new candidates. Completed optimization of one lead malaria drug to test in animals, and prepared for possible initial testing in humans.</p> <p>FY 2011 Plans: Synthesize promising compounds in larger quantities to support preclinical studies. Drugs against malaria and/or leishmaniasis are further screened in animal tests for toxicity and effectiveness. Complete testing and prepare for FDA application for clinical testing in humans.</p> <p>FY 2012 Plans: Will undertake preclinical effectiveness and toxicity evaluations of selected antiparasitic compounds, both in vitro (outside the body) and in vivo (within a living organism) in rat/nonhuman primates and down-select for advancement to clinical studies in human.</p>	4.570	3.385	3.925
<p>Title: Vaccines for Prevention of Malaria</p> <p>Description: This effort conducts studies to investigate new candidate vaccines for preventing malaria, and selects the best candidate(s) for continued development. A highly effective vaccine would reduce or eliminate the use of anti-malarial drugs and would minimize the progression and impact of drug resistance to current/future drugs.</p> <p>FY 2010 Accomplishments:</p>	4.323	2.798	4.661

A. Mission Description and Budget Item Justification

This project funds research on the human immunodeficiency virus (HIV), which causes Acquired Immunodeficiency Syndrome (AIDS). Work in this area includes developing improved identification methods to determine genetic diversity of the virus, and evaluating and preparing overseas sites for future vaccine trials. Additional activities include developing candidate vaccines for preventing HIV and undertaking preclinical studies (studies required before testing in humans) to assess vaccine for potential to protect and/or manage the disease in infected individuals.

This program is jointly managed through an Interagency Agreement between the US Army Medical Research and Materiel Command and the National Institute of Allergy and Infectious Diseases of the National Institutes of Health. This project contains no duplication of effort within the Military Departments or other government organizations.

Work is related to and fully coordinated with work funded in PE 0603105A, project H29.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Walter Reed Army Institute of Research (WRAIR) and the Naval Medical Research Center (NMRC), Silver Spring, MD, and their overseas laboratories. The Henry M. Jackson Foundation (HMJF), located in Rockville, MD provides support for FDA testing and other research under a cooperative agreement.

A. Mission Description and Budget Item Justification

This project funds the development and assessment of concepts, techniques, and materiel that improve survivability and ensure better medical treatment outcomes for Warfighters wounded in combat and other military operations. Combat casualty care research addresses: control of severe bleeding, revival and stabilization, prognostics and diagnostics for life support systems (predictive indicators and decision aids), treatment of burns, and Traumatic Brain Injury (TBI). Clinical and rehabilitative medicine research addresses: tissue repair including transplant technologies, orthopedic, eye injuries and face trauma.

Research involves extensive collaboration with multiple academic institutions to develop treatments for combat wounds through the Armed Forces Institute of Regenerative Medicine. This project contains no duplication of effort within the Military Departments or other government organizations.

Research conducted in this project focuses on the following five areas:

- (1) Damage Control Resuscitation
- (2) Combat Trauma Therapies
- (3) Combat Critical Care Engineering
- (4) Clinical and Rehabilitative Medicine
- (5) Traumatic Brain Injury

All drugs, biological products, and medical devices, are developed in accordance with US Food and Drug Administration regulations, which governs testing in animals to assess safety, toxicity, and effectiveness prior to conducting human subject clinical trials.

Promising efforts identified in this project are further matured under PE 0603002A, project 840.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work on this project is performed by the US Army Institute of Surgical Research (USAISR), the US Army Dental Trauma Research Detachment, Fort Sam Houston, TX; the Walter Reed Army Institute of Research (WRAIR), Silver Spring, MD; and the Armed Forces Institute of Regenerative Medicine (AFIRM), Fort Detrick, MD.

A. Mission Description and Budget Item Justification

This project supports the Medical and Survivability technology areas with a focus on providing Soldier protection from health hazards associated with materiel and operational environments. Emphasis is placed on identifying health hazards inherent to the engineering design and operational use of equipment, systems, and materiel used in Army combat operations and training. Areas of emphasis include battlefield lasers, ballistic and mechanical injury (e.g., models of protection by soft body armor), and health hazards of operations in extreme environments and toxic environments. Hazards addressed include blast overpressure generated by weapons systems, toxic chemical hazards associated with deployment into environments contaminated with industrial and agricultural chemicals (effort complements ongoing Defense Threat Reduction Agency initiatives for chemical/biological threat agent detection), directed energy sources (laser), and environmental stressors (heat, cold, and high altitude). Specific research tasks include characterizing the extent of exposure to potential hazards; delineating exposure thresholds for illness, injury, and performance degradation; establishing biomedical databases to support protection criteria; and developing and validating models for hazard assessment, injury prediction, and health and performance protection.

In FY10, project 878 was consolidated into Project 869.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Mater Plan.

Work in this project is performed by the Walter Reed Army Institute of Research (WRAIR), Silver Spring, MD; the US Army Research Institute of Environmental Medicine (USARIEM), Natick, MA; the US Army Center for Environmental Health Research, Fort Detrick, MD; and the US Army Aeromedical Research Laboratory, Fort Rucker, AL.

A. Mission Description and Budget Item Justification

This project supports applied research with a focus on sustaining and enhancing Soldier health and performance during military operations in the full spectrum of military environments. Emphasis is placed on the identification of baseline physiological performance and assessment of degradations produced by operational stressors. The resulting databases and collection of rules and algorithms for performance degradation in multi-stressor environments form the basis for the development of behavioral, training, pharmacological, and nutritional interventions that include psychological debriefing to prevent degradation in Soldier health and sustain Soldier performance. Key stressors include psychological stress from isolation, new operational roles, frequent deployments, inadequate restorative sleep, prolonged physical effort, and inadequate hydration in extreme environments. This project also assesses the adverse effect of shifting biological rhythms during deployments across multiple time zones (extreme jet lag), night operations, and thermal as well as altitude stress.

In FY10, project 879 was consolidated into project 869.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the Walter Reed Army Institute of Research (WRAIR), Silver Spring, MD; the US Army Research Institute of Environmental Medicine, Natick, MD; and the US Army Aeromedical Research Laboratory, Fort Rucker, AL.

A. Mission Description and Budget Item Justification

This project funds research to support applied research directed toward the sustainment of a healthy force of Warfighters from accession through retirement. This research focuses on enhanced protection of Soldiers against health threats in military operations and training. Stressors that adversely affect individual Soldier health readiness are identified and studied to develop interventions that will protect Soldiers and improve their health and performance in stressful environments. This is follow-on research that extends and applies findings from over a decade of research on Gulf War Illnesses and other chronic multi-symptom illnesses that have suspected nerve and behavioral alterations due to environmental contaminants and deployment stressors. Key databases include the Millennium Cohort Study and the Total Army Injury and Health Outcomes Database. These databases allow us to evaluate interactions of psychological stress and other deployment and occupational stressors that affect Warfighter health behaviors.

Force Health Protection applied research is conducted in close coordination with the Department of Veterans Affairs. This project contains no duplication with any effort within the Military Departments and includes direct participation by other Services working on Army projects.

Research conducted in this project focuses on the following three areas:

- (1) Physiological Response and Blast and Blunt Trauma Models of Thoracic (chest) and Pulmonary (lung) Injuries
- (2) Millennium Cohort Research
- (3) Biomarkers of Exposure and Environmental Biomonitoring.

Promising efforts identified in this project are further matured under PE 0603002A, project FH4.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the US Army Center for Environmental Health Research, Fort Detrick, MD; the Naval Health Research Center (NHRC), San Diego, CA; and the US Army Research Institute of Environmental Medicine (USARIEM), Natick, MA.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2010	FY 2011	FY 2012
<p>Description: This effort supports a long-term study of Soldiers that includes psychological, physical, and spiritual impacts of military service throughout their lifetime.</p> <p>FY 2010 Accomplishments: Performed analyses of newly reported Post-Traumatic Stress Disorder (PTSD), depression, and anxiety symptoms among Millennium Cohort participants in conjunction with increased mental and physical health problems; linked Millennium Cohort data with DoD and Veteran Administration health risk databases; conducted long-term studies to investigate the use of tobacco and alcohol among Service members in order to provide policy recommendations that enhance the long-term health of deploying forces.</p> <p>FY 2011 Plans: Conduct analyses to determine resilience factors for PTSD symptoms over time; conduct analysis to determine factors that influence resistance to depression symptoms over time and enhance mental resilience in deploying forces; conduct death analysis with specific interest in modifying factors for post-combat suicide.</p> <p>FY 2012 Plans: Will develop policy recommendations and potential intervention strategies for reduction of PTSD, depression, and anxiety symptoms and factors with a goal to reduce overall mental health symptoms.</p>				
<p>Title: Biomarkers of Exposure and Environmental Biomonitoring</p> <p>Description: This effort supports development and evaluation of methods to detect environmental contamination and toxic exposure during military operations.</p> <p>FY 2010 Accomplishments: Reviewed available sensor technology and conducted down-selection of sensors best suited to meet user performance requirements; evaluated biomarkers of exposure to selected Militarily Relevant Chemicals (MRCs) and evaluated relevant toxicity pathways to develop a method to detect toxic exposure in Soldiers.</p> <p>FY 2011 Plans: Evaluate biomarkers of exposure to additional MRCs; evaluate and accelerate discovery methods for new biomarkers; optimize individual toxicity sensor performance and minimize system components to comply with logistical deployment requirements for use in the final increment of the Environmental Sentinel Biomonitor.</p>		2.546	2.936	-

A. Mission Description and Budget Item Justification

This project supports applied research in systems biology to provide a highly effective mechanism to integrate iterative biological tests, computer simulations, and animal studies. Such developmental efforts using systems biology could ultimately reduce the time and effort invested in medical product development.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work in this project is performed by the US Army Medical Research and Materiel Command, Fort Detrick, MD.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
Title: Systems Biology	1.130	1.177	4.748
Description: This project supports multidisciplinary applied research in systems biology designed to integrate animal studies, computational simulations, and biologics (products derived from living organisms).			
FY 2010 Accomplishments: Established animal models and protocols for multidisciplinary investigations of heat stroke-caused multi-organ failure.			
FY 2011 Plans: Refine experimental model systems, identify markers for prediction of multi-organ failure resulting from heat injury, and develop supporting computational models of regulatory systems of heat injury.			
FY 2012 Plans: Refine experimental systems for assessment and enhancement of computational models for identifying pharmacological interventions for heat stroke-caused multi-organ failure.			
Accomplishments/Planned Programs Subtotals	1.130	1.177	4.748

A. Mission Description and Budget Item Justification

This project funds research over a planned five (5) year period to examine the mental and behavioral health of Soldiers to counter suicidal behavior. This work will focus on advancing understanding of the multiple determinants of suicidal behavior, psychopathology (study of the causes and nature of abnormal behavior), psychological resilience, and role functioning. A significant thrust area will focus on the development of better methods for preventing and mitigating suicidal behavior as well as to improve the overall mental health and behavioral function of Army personnel during and after their military service.

The cited work is consistent with the Director, Defense Research and Engineering Strategic Plan, the Army Modernization Strategy, and the Army Science and Technology Master Plan.

Work on this project is performed by The National Institute of Mental Health (NIMH) through extramural cooperative research grants in collaboration with the Department of the Army.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2010	FY 2011	FY 2012
<p>Title: Suicide Prevention/Mitigation</p> <p>Description: This effort conducts research to better understand the apparent increase in suicide deaths and nonfatal attempts among Active Duty Soldiers. Improved prevention/intervention methods to be identified for individuals at risk for suicide based on data-driven recommendations. The efforts would be utilized to decrease suicide rates in both military populations as well as in the general public.</p> <p>FY 2010 Accomplishments: Completed initial analyses of blood and biomarker data collected from historical records of Army recruits; initiated a biomarker pilot study to investigate depression in soldiers; initiated research efforts designed to enhance screening, prevention, and intervention strategies for suicide prevention.</p> <p>FY 2011 Plans: Continue to conduct research to better understand the apparent increase in suicide deaths and nonfatal attempts among active duty Soldiers; continue epidemiological (population-based) studies to identify determinants of suicidal behaviors and potential modifiable risk factors; continue to develop better methods for preventing suicidal behaviors based on data driven recommendations to mitigate or prevent suicidal behaviors.</p> <p>FY 2012 Plans:</p>	10.000	10.000	10.000

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2010	FY 2011	FY 2012
Will continue epidemiological (population-based) studies to further identify determinants of suicidal behavior as well as potential modifiable risk factors; will collect data for suicide-death case control study; will conduct research efforts to assist in improved identification of individuals at greatest risk for suicide as well as to validate screening measures and enhance prevention/intervention methods.
