Description:

Protective Systems includes the Battlefield Anti-Intrusion System (BAIS), a compact, modular, light-weight, unattended tactical ground seismic/acoustic sensor that provides tactical units forward Operating Bases with an enhanced force protection capability. BAIS provides early detection and warning of personnel and wheeled or tracked vehicles, increasing situational awareness during defensive and ambush-type operations. BAIS can be integrated into a layered system of systems force protection plan for small tactical units. BAIS is also one of the sub-systems included in the Force Protection Suite that is part of the Base Expeditionary Targeting and Surveillance System, Combined (BETSS-C), employed in Forward Operating Bases (FOB) and Combat Outpost (COP) defense and force protection.

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

This line contains Non-Lethal Equipment, All Types. It currently contains the Launched Electrode Stun Device (LESD) and the Acoustic Hailing Device (AHD).

M11209 The Launched Electrode Stun Device (LESD) is a hand held device used for Electro-Muscular Incapacitation (EMI). It overrides the sensory and motor nervous system with an electrical impulse. The device launches tethered probes that attach to target and transmit the EMI effect through up to 2 inches of clothing. It has an effective range from 0 to 25 feet. This item is Code A, approved for service use.

M11309 The Acoustic Hailing Device (AHD) is a non-kinetic, long range hailing and warning device capable of producing highly directional sound beams to project warning tones and intelligible voice commands to distances of 300 meters from the device with background noise present at the target's location. AHDs will support Military Police (MP) and Transportation units, to engage non-combatants during support and stability operations. Less than lethal force is desired and necessary to prevent and minimize civilian casualties. Equipment will allow Soldiers to effectively determine the intent of a person, crowd, vessel or vehicle at a safe distance and potentially deter them prior to escalating to lethal force. This item is Code B, not approved for service use.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
FY 2014 Base procurement dollars in the amount of \$0.762 million supports program management for the LESD. The LESD will be fielded to a variety of Military Police units in the Active, Guard, and Reserve components, giving Soldiers and Commanders an organic nonlethal capability that supports Escalation of Force rules by providing incapacitating effects that are temporary and reversible. This capability protects Soldiers and Civilians by providing options to deter aggressive behavior short of lethal means and minimizing the necessity of reverting to deadly force. Army Acquisition Objective (AAO) is 12,667 devices.

TYPE CLASSIFICATION: 23 AUG 2011

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Remarks:

There is a significant commercial market for this item. Production rates shown are monthly.

"A" in the Delivery Schedule indicated the Contract Award Date.

Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Description:

Base Defense Systems (BDS) includes Non-Intrusive Inspection Systems (NIIS) (M90108), Battlefield Anti-Intrusion System (BAIS) (M90202) and Lighting Kit Motion Detection (LKMD) (M90204).

NIIS is a family of systems that inspects for the presence of explosives, weapons and other contraband in vehicles, cargo containers and personnel from a distance providing stand-off ballistic and blast protection. The current family of systems includes the Z-backscatter Van (ZBV), Military Mobile Vehicle and Cargo Inspection System (MMVACIS) and personnel scanners such as the Secure-1000. All systems are either mobile or fully relocatable. It is a force multiplier that maximizes protection of personnel, equipment and installations while minimizing manpower requirements. NIIS provides the capability to non-intrusively inspect vehicles, cargo containers and personnel for the presence of explosives, weapons or other contraband which can kill or injure Soldiers and destroy critical warfighting materiel. NIIS supports the urgent need for Counter-Improvised Explosive Device equipment to support military operations.

BAIS is a compact, modular, light-weight, unattended tactical ground seismic/acoustic sensor that provides tactical units forward Operating Bases with an enhanced force protection capability. BAIS enhances force protection and provides early detection and warning of personnel and wheeled or tracked vehicles, increasing situational awareness during defensive and ambush-type operations. BAIS can be integrated into a layered system of systems force protection plan for small tactical units. BAIS is also one of the sub-systems included in the Force Protection Suite that is part of the Base Expeditionary Targeting and Surveillance System, Combined (BETSS-C), employed in Forward Operating Bases (FOB) and Combat Outpost (COP) defense and force protection. BAIS provides combat Soldiers a force multiplier security/force protection system that significantly increases the combat potential and Soldier survivability of that force, thus enhancing the probability of successful mission accomplishment. BAIS replaces the Platoon Early Warning System (PEWS), which is no longer in production. The Army Acquisition Objective (AAO) is 8,933 systems.

LKMD is a lightweight, man-portable, easily emplaced and recoverable motion activated warning device. LKMD provides an early detection and warning capability enhancing force protection and situational awareness during all types of combat operations. LKMD is a motion activated (Infrared (IR) and Microwave) warning and illumination (visible light, IR and strobe) system. LKMD can be employed in a stand-alone configuration or as part of an integrated protection plan. LKMD provides small-unit Commanders with close-in warning of imminent intrusion and illuminates the intrusion where it occurs, permitting easier identification and facilitating appropriate reaction. LKMD systems will be organic to appropriate tactical units. LKMD provides support systems to Army units either operating in or deploying to combat theaters, thereby increasing force protection posture. The Army fielding plan, based on the approved Basis of Issue Plan, requires systems be provided to the following types of units: Military Police, Infantry, Armor and Combat Engineers. LKMD replaces the M49 Trip Flare, Electronic which is no longer in production. The Army Acquisition Objective (AAO) is 34,711 systems.

[#] FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

Funds support acquisition of critically required Chemical Biological equipment needed to support Army mission requirements in five primary categories: Collective Protection (M01006), Decontamination (M01007), Contamination Avoidance (M01008), Individual Protection (M99001), and Weapons of Mass Destruction (WMD) Elimination (M01011). Collective protection platforms include hard and soft wall shelters, vehicles, and structures. The Decontamination program consists of the Joint Service Transportable Decontamination System, Small Scale (JSTDS-SS). The Contamination Avoidance program includes systems that provide detection, identification, collection and reporting of CBRN hazards. The Individual Protection program provides Protective Masks and test equipment. The WMD Elimination (M01011) procurement efforts support missions to systematically detect, locate, characterize, identify, secure, disable and/or destroy WMD weapons, materials and related capabilities within CONUS, OCONUS and Theater.

Justification:
FY14 Base procurement dollars in the amount of \$17.992 million supports the procurement of 11 of the 1035 Army Acquisition Objective for Chemical Biological Protective Shelter (CBPS) Systems. The CBPS provides the Forward Surgical Team (FST) and the Area Support Medical Company (ASMC) with a CB protective shelter system that allows their mission to continue in a chemical/biological environment. The FST and ASMC, which by doctrine must function together, are critical assets to the Brigade Combat Team Commander. The CBPS also provides chemical protective shelter capabilities to the Role 1 Medical Treatment Facility (MTF)/Battalion Aide Station (BAS) mission.

FY14 Base procurement funding in the amount of \$4.159 million will procure 192 National Fire Protection Act (NFPA) Class One Personal Protective Equipment (PPE) suits, 1,216 NFPA Class Two PPE suits, and 5,300 NFPA Class Three PPE suits. Funding supports commercial-of-the-shelf (COTS) Personal Protective Equipment (PPE) in support of Defense Support of Civil Authorities (DSCA) Chemical-Biological-Radiological-Nuclear Consequence Management Response Forces (CCMRF). These funds provide the required PPE ensembles and masks to Component (COMPO) 6, Army Prepositioned Stock (APS) as part of Operational Project (OPROJ) P24 for Army North (ARNORTH) logistics support to Joint Task Force / Disaster Assistance operations.

Description:

The Dry Support Bridge (DSB) is a mobile, rapidly erected, modular military bridging system used by the Multi-Role Bridge Company (MRBC). The DSB can span a 40-meter gap or two 20-meter gaps up to Military Load Class (MLC) 100 Wheeled/MLC 80 Tracked. The DSB has a road width of 4.3 meters and an emplacement time of 90 minutes or less, with little or no site preparation. The DSB will support the Joint Force Commander's ability to employ and sustain forces throughout the global battlespace.

The Line of Communication Bridge (LOCB) system provides a 50 meter dry gap crossing capability and a 280 meter wet gap crossing capability to the Multi-Role Bridge Company (MRBC). The LOCB supports up to Military Load Class (MLC) 120 tracked and MLC 150 wheeled equipment. The LOCB has a roadway width of 4.5 meters. Each 50 meter fixed LOCB system consists of girder beams, cross bracing, decking, guard rails, erection and anchorage sets, tools and all associated hardware, and will come with a ramp set, 5 meter pier, and ground beams. Additionally available will be 10 meter pier sets and pedestrian walk ways. The 280 meter float LOCB system will consist of girder beams, cross bracing, decking, guard rails, flotation, erection and anchorage sets, tools and all associated hardware, and will come with a ramp set and ground beams. One 50 meter fixed LOCB will be fielded per MRBC. Forty (40) 50 meter fixed LOCB and five (5) 280 meter float LOCB will be located in Army prepositioned stock for rapid deployment to the theater of operations. Also USAES (U.S. Army Engineering School) will have six (6) 50 meter fixed LOCB and two (2) 130 meter float LOCB for training.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.
 Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
 FY 14 Base procurement dollars in the amount of \$14.188 million supports the program office requirements for the DSB as the fielding of the system is completed and the procurement of 2 Line of Communication Bridges (LOCB). The DSB is a major component of the MRBC and the Army requirement supports 26 MRBCs to replace the currently fielded Medium Girder Bridge. The LOCB system provides the United States Army with an enhanced support bridging capability to replace the existing Bailey Bridge (BB).

IAW Section 1815 of the FY 2008 National Defense Authorizatoin Act (P.L. 110-181), this item is necessary for use by the active components and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

"A" in the Delivery Schedule indicated the Contract Award Date.

Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

"A" in the Delivery Schedule indicated the Contract Award Date.

Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Description:

The Tactical Float Ribbon Bridge line supports the Multi-Role Bridge Company (MRBC). One Tactical Float Ribbon Bridge System consists of the Improved Ribbon Bridge (IRB) bays (30 Interior and 12 Ramp); 14 Propulsion Bridge Erection Boats (BEB) and 56 Common Bridge Transporters (CBT). These components are required to transport, launch, erect and retrieve up to 210 meters of floating bridge. The IRB has a Military Load Capacity (MLC) 96 wheeled (normal) and 110 (caution)/MLC 70 tracked (normal) and 85 (caution) and is used to transport weapon systems, Troops, and supplies over water when permanent bridges are not available. This MLC will support the Joint Force Commander's ability to employ and sustain forces throughout the global battlespace. The Army plans to have 26 MRBCs.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
 FY 2014 Base procurement dollars in the amount of \$23.101 million supports the procurement of 20 IRBs and 14 BEBs for Active Army unit requirements. The Ribbon Bridge Bays are the major components of the Ribbon Bridge system which provides the capability for a continuous floating roadway for transporting assault tactical vehicles. The newly designed BEB will improve fleet readiness by improving the basic design to meet current survivability, transportability, and interoperability requirements. Funding supports a balanced investment strategy for the Army's approved force structure and Army Force Generation (ARFORGEN) requirements.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Description:

The M1977A4 Common Bridge Transporter (CBT) and Palletized Load System Trailer (PLST) are part of the Ribbon Bridge System. The CBT transports and launches the Bridge Erection Boat (BEB) and Improved Ribbon Bridge (IRB) Bays using the M14 Improved Boat Cradle (IBC) and the M15 Bridge Adapter Pallet (BAP) in the Multi-Role Bridge Company (MRBC). The CBT is also the transporter and launch vehicle for the Rapidly Emplaced Bridge System (REBS) supporting the Stryker Brigade Combat Teams (SBCT). There are 4 REBS (CBT with M21 launcher and bridge) in each engineer company of an SBCT. The Army plans to equip 26 MRBCs, 9 SBCTs, 1 Theater Provided Equipment (TPE) MRBC and 12 CBTs for the training base. There are 56 CBTs required per MRBC.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
 FY2014 Base procurement dollars in the amount of \$15.416 million supports the recapitalization of 51 Common Bridge Transporters. The currently fielded M1977A0 and M1977A2 CBTs have significant obsolescence issues due to armor, electrical, and powertrain improvements. The M1977A4 provides the Soldier with key survivability requirements to include a Long Term Armor Strategy (LTAS) compliant cab, new engine and transmission, air ride suspension, anti-lock brakes and traction control, and an updated electrical system to support current and future diagnostic/prognostics systems.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

MFR #	MFR Name - Location	Production Rates (Each / Month)			Procurement Leadtime (Months)							
		MSR	1-8-5	MAX	Initial				Reorder			
					ALT Prior to Oct 1	ALT After Oct 1	Mfg PLT	Total After Oct 1	ALT Prior to Oct 1	ALT After Oct 1	Mfg PLT	Total After Oct 1
1	TBS - TBD	315.00	924.00	2,520.00	-	6	8	14	-	4	6	10

Remarks:

Government EOQ 1-8-5 production rate (924/month) accommodates mix of government and commercial production on contractor's integrated production line. Max rate (2520/month) reflects contractor capacity using second and third shifts dedicated to government production. Production rates may change if another contractor is awarded the contract.

"A" in the Delivery Schedule indicated the Contract Award Date.

Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Description:

The AN/PSS-14 Mine Detecting Set is a lightweight self-contained handheld mine detector system that is operated by a single soldier. It consists of a Ground Penetrating Radar (GPR), improved Metal Detector (MD), and detection algorithms that combine to provide a greatly enhanced capability over the presently fielded metal detector. The AN/PSS-14 provides the Warfighter with the capability to detect improvised explosive devices and the full spectrum of land mines to include metallic and low-metallic mines. This item is Code A, approved for service use.

Army Acquisition Objective (AAO) is 18,461 sets.

[#] FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

This is an All Types line covering ground vehicle mounted or towed landmine detection marking and neutralization systems. This exhibit contains the following programs:

Improvised Explosive Devices (IED) and landmine marking detection, interrogation, neutralization, protection, route clearance and area clearance capabilities required for Overseas Contingency Operations and future battlefields. Procurements of improved detection, interrogation, neutralization, and protection capabilities for mine and IED threats are expected as technology becomes available.

Mine Clearing and Proofing Systems

The Area Clearance Family of Systems (FOS) includes mine clearing flails for area clearance of minefields. In addition, the FOS includes a proofing system to ensure that the flails have completely cleared the minefield. The Area Mine Clearance System (AMCS) flail is a medium, commercially available, blast protected mechanical flail designed to clear large areas of anti-tank (AT) and anti-personnel (AP) landmines. The Area Mine Proofing System (AMPS) is a bulldozer that has been integrated with a Sifting Lattice and Hydraulic Power Unit which picks up the flailed soil and sifts it for any mines or unexploded ordnance. The AMPS performs the proofing mission. The Medium Flail and AMPS are two pieces of the Area Clearance Family of Systems. The flails clear all types of mines from large areas of terrain to assure mobility for military operations. The flails are armored against ballistic threats and mine blasts so that the Soldier/Operators on-board are protected. The Mine Sifters provide the final step in ensuring that the detected mines are removed and disposed of in a safe and mission effective manner. Both the Route Clearance and Area Clearance Systems significantly reduce the rates of fatalities, casualties, and loss of equipment.

Robotic Combat Support Systems

The M160 (formerly MV4) is a 6.1-ton tracked, combat engineer vehicle designed for teleoperation by soldiers from either mounted or dismounted positions to perform area clearance of antipersonnel mine sown areas. The M160 detonates or destroys anti-personnel mines in a 66 inch wide path through the action of a rotating chain and hammer flail system. It fills the Light Flail mission in the Area Clearance Family of Systems. Robotic Combat Support System information has a new budget line for FY 2012 and is reported under SSN M80400.

Husky Mounted Detection System (HMDS)

HMDS provides state of the art detection (ground penetrating radar) of surface laid and shallow buried explosive hazards (IEDs and landmines), deep buried cache detection, and semi-autonomous operation, and associated training devices in support of route clearance missions. HMDS is a mission equipment package mounted on Husky route clearance vehicles and is located within Route Clearance Platoons.

MDAP/MAIS Code(s):

Vehicle Optical Sensor System (VOSS)
VOSS provides the capability to detect explosive hazards such as IEDs from a stand-off distance using a telescoping, gyro-stabilized, high-resolution, triple sensor (daylight, night-vision, and thermal-imaging) surveillance system to optically detect from standoff distances, explosive hazards (IEDs and landmines) and their trigger sources. VOSS is mounted on Medium Mine Protected Vehicles (MMPV) used by Route Clearance Platoons and EOD Companies.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
FY 2014 Base procurement dollars in the amount of \$50.465 million supports production of 96 HMDS training devices and will refresh 215 VOSS systems and bring them to a common configuration for VOSS Increment 1 of the Program of Record against the AAO of 980 systems.

"A" in the Delivery Schedule indicated the Contract Award Date.

Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

This Robotic Combat Support System (RCSS) Budget line procures the M160, the Man Transportable Robot System (MTRS) Inc II and the Robotic Clearance Integration System (RCIS).

The M160 is a 6.1-ton tracked, combat engineer vehicle designed for teleoperation by soldiers from either mounted or dismounted positions to perform area clearance of antipersonnel mine-sown areas. The Army Acquisition Objective (AAO) is 41. The M160 detonates or destroys anti-personnel mines in a 68-inch wide path through the action of a rotating chain and hammer flail system. The M160 provides standoff and increased protection for engineer units in conducting route and area clearance missions. It fills the Light Flail mission in the Area Clearance Family of Systems. Quantities for FY13 include Operational Needs Statement (ONS) requirements for Forces Command (FORSCOM), United States Army Pacific Command (USARPAC), and United States Army Europe (USAREUR) Pre Deployment Training Equipment (PDTE). Fiscal Year 2012 quantities fulfill ONS 11-14868. The M160 is a modified Commercial Off The Shelf (COTS) system.

The Man Transportable Robot System (MTRS) Inc II is designed for route clearance and reconnaissance. It provides the Soldiers with the ability to locate, identify, and clear landmines, unexploded ordnance and Improvised Explosive Devices in the path of maneuvering US Army or Joint Forces. It also provides Chemical, Biological, Radiological, Nuclear (CBRN) Soldiers with the capability to employ CBRN sensors from a standoff distance. The robot is a teleoperated platform and contains both an arm and cameras. In addition, the unit has an Operator Control Unit, a handheld controller that allows the operator standoff to operate the vehicle from a mounted or dismounted location. The operator uses the Operator Control Unit to receive video and vehicle control data and to transmit commands to the vehicle. This is a Commercial Off The Shelf (COTS) system.

The Robotic Clearance Integration System (RCIS) Type I and II will allow the tele-operation of Type I (High Mobility Engineering Excavator (HMEE)) and the semi-autonomous control of Type II (RG-31). The RCIS Type I (HMEE) enables the soldier to interrogate, classify and excavate deep buried explosive hazards, Improvised Explosive Devices (IEDs), and caches in a wide range of road surfaces and soil conditions. The RCIS Type II (RG-31) enables soldiers to semi-autonomously control the RG-31 and its payloads. RCIS procurement is scheduled to start if FY17.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
FY14 Base procurement dollars in the amount of \$6.490 million will purchase commercial off the shelf (COTS) solutions for MTRS Inc II (\$3.49M) and to support the M160 restoration and recapitalization program (\$3.00M). The MTRS Inc II Material Development Decision (MDD) is scheduled for 3QFY13 and Milestone C in 4QFY14. The RCIS Capabilities Requirements Document was approved on 17 December 2012. The RCIS MDD was delayed pending development of a unified strategy for unmanned vehicles. Strategy formulation is now in process. The RCIS MDD is planned for 3QFY13 with LRIP planned for 4QFY16.

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

Army EOD Recapitalization Program Man Transportable Robotic System (MTRS) provides a two person portable, lightweight robotic system capable of being transported in the EOD team's response vehicle or in a helicopter. Provides EOD soldiers capability to perform remote reconnaissance and EOD operations in situations where Remote Ordnance Neutralization System (RONS) is too large to employ. Recapitalization includes replacement of radios and unserviceable parts.

Secondary Distribution	FY 2012	FY 2013	FY 2014 Base	FY 2014 OCO	FY 2014 Total	FY 2015	FY 2016	FY 2017	FY 2018

Total Obligation Authority	-	-	1.563	-	1.563	1.825	5.364	5.176	5.264

Justification:

FY 2014 Base procurement dollars in the amount of \$1.563 million procures refresh/recapitalization of 31 MTRS platforms.

Funding for active component only.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

The Explosive Ordnance Disposal (EOD) equipment provides the capability to examine, identify, and defuse ordnance effectively and safely for Homeland Defense and Force Protection throughout the world. This equipment enables EOD soldiers to rapidly and safely render safe Unexploded Ordnance (UXO) and Improvised Explosive Devices (IED) that constitute a hazard to friendly operations, installations, personnel, or materiel. Also used for dismantled operations.

EOD Response Kit -- The EOD Response Kit is a set of common and special purpose tools used by EOD soldiers in response to incidents involving unexploded ordnance. It consolidates tools from 4 sets into one set, adds tools, and organizes them into mission oriented modules (e.g., demolition, technical intelligence, recon, etc.) with significant overall reduction of weight and cube. The Army Acquisition Objective (AAO) for EOD Response Kit is 643 systems.

Manual Transport Robotic System (MTRS) -- Formerly known as Man Transportable Robotic System provides a two person portable, lightweight robotic system capable of being transported in the EOD team's response vehicle or in a helicopter. This gives EOD soldiers capability to perform remote reconnaissance and EOD operations in situations where Remote Ordnance Neutralization System (RONS) is too large to employ. The Army Acquisition Objective (AAO) for MTRS is 1,200 systems.

Next Generation Transmitter, Countermeasures (TCM) -- Consists of two models, AN/PLT-4 and AN/PLT-5. AN/PLT-5 is a man-portable (backpack) system that protects the soldier while performing dismantled EOD operations. The AAO for the AN/PLT-5 is 640 systems.

Future Radiographic System (FRS) -- The FRS provides the EOD soldier with the integrated capability to obtain real time digital x-ray images of fuzes and improvised explosive devices. The Army Acquisition Objective (AAO) for FRS is 627.

Disrupter Integration System (DIS) -- The DIS provides a remote means to employ EOD disrupters at standoff, achieved by teleoperating the MTRS. This technology enables EOD to have a robotically employed means of operating the Percussion Actuated Nonelectric (PAN) disrupter, the MK 40 Stand-Off Disrupter, and the MK 38 Small Caliber De-Armers (SCD). The Army Acquisition Objective (AAO) for DIS is 250.

---	---	--

MDAP/MAIS Code(s):

66mm Shape Charge -- The 66mm Shape Charge is a field-packable 66mm copper, shaped charge liner and plastic container to be used against a variety of targets, specifically deeply buried IEDs and Insensitive High Explosive (IHE) munitions that utilizes a 'lumpy' liner design to effectively increase the diameter of penetration through the explosive casing. The Army Acquisition Objective (AAO) for 66mm Shape Charge is 6,631.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
 FY14 Base procurement dollars in the amount of \$20.921 million procures equipment for modernization and uneconomically repairable assets, to include: 143 Future Radiographic Systems (FRS) and 6,631 66mm Shape Charges. The EOD equipment will be fielded throughout the active Army and National Guard units. This equipment will increase operational capabilities of EOD units, as well as enhance the safety of EOD soldiers.

"A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Description:

This line includes Remote Demolition Systems, All Types. It includes Radio Frequency - Remote Activated Munition System (RF RAMS) and Magneto Induction - Remote Activated Munition System (MI RAMS) and other system components.

M60002 Radio Frequency Remote Activation Munition System (RF RAMS) (MK152) is a radio-controlled wireless firing device that provides the capability to wirelessly control the initiation and the detonation of demolition charges or the remote operation of other items such as laser markers and radio functioning munitions. The basic components of the RF RAMS are (1) MK26 Transmitter with two antennas, (6) MK16 Receivers with antennas and (1) M6 Battery Retainer which provides additional power for the transmitter. RF RAMS has a nominal range of 2 kilometers line of sight (LOS) and 5 kilometers LOS with the M6 Battery Retainer. The Shock Tube Initiator (XM50) is an associated component/interface that is required when using the MK152 to initiate Modernized Demolition Initiators M19, M21 and M23. This item is Code A, approved for service use.

M60003 Magneto Induction Remote Activation Munition System (M156) (MI RAMS) is a wireless firing device that provides the capability to wirelessly control the detonation of demolition charges or the remote operation of other items such as laser markers and radio functioning munitions. The basic components of the MI RAMS are (1) M27 Transmitter with one 2 meter loop antenna, (3) M39 Receivers with antennas and (1) M6 Battery Retainer which provides additional power for the transmitter. The M156 MI RAMS can penetrate through media such as caves, tunnels, fresh water, salt water, dense foliage, and man-made structures. This characteristic eliminates any line-of-sight (LOS) requirements for MI RAMS. Maximum operating distances from M27 Transmitter to M39 Receiver will vary with the operating environment. The maximum operating distance is 150 meters through all natural media. When using the M6 Battery Retainer, the maximum operating distance is extended to 200 meters. Shock Tube Initiator (XM50) is an associated component/interface that is required when using the M156 to initiate Modernized Demolition Initiators M19, M21 and M23. The M331 is the inert functional trainer receiver for the M40 tactical receiver.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:

FY 2014 Base procurement dollars in the amount of \$0.100 million supports production engineering for RF RAMS sets.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Remarks:
 Production rates shown are monthly.
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

This line covers procurement of countermine equipment with a total cost of less than five million dollars. This line includes detectors, neutralizing devices, training aids and devices to support New Equipment Training (NET), initial entry training, and institutional training, as well as any related tasks. It also funds initial fielding and deployment of equipment to support Military Working Dogs.

The family of Military Working Dogs (MWD) includes the Specialized Search Dog (SSD), Mine Detection Dog (MDD), Patrol Narcotics Detection Dog (PNDD), and legacy Patrol Explosive Detector Dogs (PEDD). Items to be acquired for MWD support includes commercial kennels, scent kits, deployment kits, organizational kits and kits to support installation requirements.

The Blasting Demolition Kit contains shaped charge liners and other demolition items that are used to fabricate customized demolitions in the field.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
 FY 2014 Base request in the amount of \$2.271 million procures initial fielding and deployment of 70 Blasting Demolition Kits to support initial fielding to combat engineers. FY 2014 funding supports critical Army Title 10 war reserve/operational, training, and test requirements IAW DoD Instruction 3000.04 (Munitions Requirements Process) and AR 5-13 (Total Army Munitions Requirements Process and Prioritization System). War reserve requirements support OSD-approved Combatant Commander Operational Plans, Homeland Defense, and other OSD-directed missions. Training requirements support individual and collective training of Active and Reserve Component forces at Army schools, home station, and the combined training centers. Test requirements support the development, fielding, safety, and quality assurance of Army munitions and equipment throughout their life-cycle.

Remarks:
P21 forms begin in FY12. Prior to FY12 funding was less than five million.
"A" in the Delivery Schedule indicated the Contract Award Date.
Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

[#] FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

The Improved Environmental Control Unit (IECU) program provides cooling and supplemental heating for Army tents and shelters. Systems range in size from 9,000 to 120,000 British Thermal Units/hour (BTU/hr) and are powered by common electrical currents supplied by both mobile electric power systems and standard commercial facilities. IECUs also provide dehumidification and filtering of air in support of environmentally sensitive electronic equipment in mobile shelters and vans. IECUs support critical electronic equipment that would not support the Army mission without proper environmental control. IECUs support over 180 separate tactical weapon systems. The majority of the supported weapon systems are command, control, and communication items. Other applications include medical facilities, force provider systems, support equipment, satellite communications, intelligence gathering systems, petroleum and water logistics laboratories, electronic shop sets, Test Measurement and Diagnostic Equipment (TMDE), aviation shop sets and topographic support sets.

The Improved Environmental Control Unit (IECU) program will provide a new generation of Environmental Control Units (ECUs) that use environmentally approved refrigerants, with zero ozone-depleting chemicals (ODCs), to replace the current Military Standard (MIL-STD) Family of ECUs. IECUs are required to replace currently fielded environmental control units in order to comply with statutory and regulatory restrictions on the use of Class II Ozone Depleting Chemicals (ODCs) and to increase the performance of military ECUs. They are form, fit and function replacements to the current MIL-STD ECUs. IECUs operate at wider operating temperatures, are more ruggedized than commercial ECUs, and employ embedded diagnostics and automatic safety controls. Technical improvements over existing military-standard ECUs will yield significant fuel and weight savings, reduction in scheduled maintenance, and increased reliability.

The 60,000 British Thermal Units per hour (BTU/H) Improved Environmental Control Unit (IECU) program is a joint Army and Air Force effort to replace the heavy and inefficient field Environmental Control Units that utilize ozone depleting refrigerants. The 60,000 BTU/HR IECU will be a replacement for the existing Army 54,000-BTU/HR Environmental Control Unit (ECU) and Air Force developed 66,000-BTU/HR Field Deployable Environmental Control Unit. The 60,000 BTU/H IECU will be lighter in weight than the existing military ECUs.

The Large Capacity Field Heater (LCFH) provides 400,000 BTUH. It is used to heat maintenance tents, specifically the Lightweight Maintenance Enclosure (LME), in cold environments so that soldiers can safely repair a wide variety of equipment such as trucks, tanks, helicopters, and air defense and field artillery systems. It is thermostatically controlled and uses either diesel or JP-8 fuel to produce heat. This supports the single fuel on the battlefield concept. The LCFH is mobile and delivers both heated and re-circulated fresh and vented air through sealed, detachable, flexible ducts. It is suitable for use in temperate and arctic environments. It replaces the dangerous, outdated, gasoline powered, 400,000 BTUH Herman Nelson Heater. The LCFH is safer for personnel operating equipment in enclosed areas

MDAP/MAIS Code(s):
because it eliminates carbon monoxide emissions within the shelters. The LCFH has many proven advantages over its Commercial-Off-The-Shelf (COTS) heater alternatives which include lower procurement/life cycle costs, higher operating efficiency, and significantly reduced fuel costs. The rugged LCFH also meets military's stringent transportation, health, safety, and environmental requirements and provides the soldier in the field a safe, maintainable and reliable heating system with built-in diagnostics to aid in simplified repairs and reduced down time to increase mission readiness.

ID Code (A=Service Ready, B=Not Service Ready) :	Program Elements for Code B Items:	Other Related Program Elements: 0608804A
MDAP/MAIS Code(s): FY14 Base procurement dollars in the amount of \$7.269 million supports the family of Improved Environmental Control Units 9,000 BTU/hr (British Thermal Units), 18,000 BTU/hr, 36,000 BTU/hr and 60,000 BTU/hr IECUs that are required as a component or separately authorized in support of fielded tactical weapon systems. They are required to fill existing shortages or provide replacement for assets that are over-aged, unsupported, and not repairable. The IECUs are critical to the systems they support. Additionally, IECUs are required to fill urgent shortages on new fieldings of high priority weapon systems. They are used in select shelters which house critical life-saving operations in Combat Support Hospitals and storage of perishable supplies in Brigade Support Battalions. The 9,000 BTU/hr, 18,000 BTU/hr, 36,000 BTU/hr and 60,000 BTU/hr IECUs provide an EPA compliant capability to the force structure before commercial/military stocks of previously used refrigerant are exhausted and no longer available. There are no FY14 OCO dollars for IECU. There are no FY14 Base and OCO dollars for LCFH. In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Remarks:
 All production rates shown on a yearly basis
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

Provides unit and field service equipment to enhance soldier efficiency, effectiveness, and sustainability. Items include laundries, latrines, showers and clothing repair which directly affect combat readiness and sustain combat power by promoting wellness and preventing disease. These efforts are in accordance with the standards determined by the Surgeon General. This program procures and fields a critical capability that supports the Army's transformation and maintains readiness through fielding and integrating new equipment. Products produced reduce sustainment requirements, related Combat Support/Combat Service Support (CS/CSS) lift demands, the overall combat zone footprint, and logistical support costs.

The Laundry Advanced System (LADS) is the Army's water-based, mobile field laundry system, with one LADS replacing up to four of the current M85 laundries. It consists of laundry-processing and water recycling equipment mounted on an International Standards Organization (ISO) certified frame, a 30 kilowatt (KW) Tactical Quiet Generator, all mounted on a 40 foot M871 trailer and towed by a 5-ton tractor. Each LADS will wash laundry for 500 soldiers per day using a dry-to-dry process (dirty clothes are placed in the drum and removed clean and dry at the end of the one-hour cycle). The LADS will recycle approximately 97 percent of the water used in the laundry process, reducing water consumption to under 500 gallons per day compared to over 20,000 gallons for four M85s (with only 20 gallons of waste water produced). The system is run by two operators per 10-hour shift; two shifts per day result in a 75 percent manpower reduction compared to the four-M85 laundry operation. This program procures and fields a critical capability that supports the Army's transformation by maintaining readiness through fielding and integrating new equipment and by reducing sustainment requirements, related Combat Support/Combat Service Support (CS/CSS) demands on lift, combat zone footprint, and costs for logistical support.

The Battlefield 12-head Shower enhances the mission support capability of the Field Service Company as this unit provides tactical field services (shower, laundry, and clothing renovation) to soldiers in forward areas. The primary mission of the Battlefield 12-head Shower is to provide hot showers for soldiers in the field. This shower will replace the antiquated 8 and 9-head showers that are no longer supportable. The system comes complete with a shelter, water heater, pumps and ancillary equipment and has a requirement to move once every 3 days in the field. The Army Acquisition Objective (AAO) for the 12-head Shower is 247.

The Clothing Repair Shop (CRS) provides the field Service Company's capability to perform its clothing renovation mission. It consists of commercial sewing, darning, button and heat sealing machines and associated items and work stations transported on a M105 trailer. Current equipment is no longer supportable and there is a severe shortage of assets. The Army Acquisition Objective (AAO) for the CRS is 200.

[#] FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

The Soldier Enhancement Program (SEP) was established in accordance with Congressional language in the National Defense Authorization Act for Fiscal Year 1990 and 1991. The purpose of the SEP is to increase the combat effectiveness of our Soldiers through accelerated integration, modernization, and capability enhancement efforts. The Soldier Enhancement Program OPA 3 provides the means of procuring equipment designed to increase Soldiers' operational effectiveness.

Secondary Distribution	FY 2012	FY 2013	FY 2014 Base	FY 2014 OCO	FY 2014 Total	FY 2015	FY 2016	FY 2017	FY 2018
Army	Quantity	-	-	-	-	-	-	-	-
	Total Obligation Authority	-	6.522	-	-	-	-	-	-

Justification:

FY 14 base procurement in the amount of \$1.468 million supports post evaluation procurement of successful SEP initiatives. This shortens the time required to field capabilities initiated under SEP. Items in this category include COTS/GOTS/NDI optics, selected night vision devices, Soldier-worn power solutions and individual Soldier equipment. Capabilities envisioned for procurement include the Binocular Night Vision Device (BNVD) which provide an increased night vision capability through the use of a binocular Image Intensifier (I2) device in order to increase situational awareness and depth perception and the AN/PAS-29 Clip On Thermal Imager (COTI) which attaches to existing NVDs with a bracket allowing improved visibility in no-light/low-light by detecting thermal images and residual heat.

"In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for the use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities."

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
 FY 14 Base procurement dollars in the amount of \$26.526 million supports procurement of Personnel Recovery Support System (PRSS) products that support the Army's capability to report and locate isolated, missing, detained, and captured Soldiers. Funding procures equipment and materiel to support a balanced investment strategy for the Army's approved force structure and Army Force Generation (ARFORGEN) requirements.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Description:

The Nett Warrior (NW) Program (named in honor of Medal of Honor recipient Colonel Robert C. Nett), also known as the Ground Soldier System (GSS) Program, leverages commercial smart devices and secure Army tactical radios to provide the dismounted leader an integrated mission command and situational awareness system for use during combat operations. The NW system provides operators electronic, real-time information on friendly positions; information about enemy activity and movement; navigational data and map imagery; and other mission related graphics which effectively puts the power of the entire Army tactical network in the hands of the dismounted leader. The NW system also provides the same integrated mission command capability to tactical vehicle mounted leaders so that when they dismount their vehicles, they still have access to the common operating picture (COP) and have full situational awareness. This capability provides unparalleled situational awareness and understanding to the dismounted leader allowing for faster, more accurate decisions and reduced fratricide in the tactical fight. NW also procures supporting power systems aimed at significantly reducing power requirements in the expeditionary environment.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
FY14 Base procurement dollars in the amount of \$81.680 million procures NW Soldier worn hardware, NW support equipment, NW system fielding, sustainment and support services, and trains Joint Tactical Radio System (JTRS) Radios running Soldier Radio Wave form for fielding to Army Brigade Combat Teams in Capability Set 15 and supports Capability Set 14 Brigade Combat Teams. NW equipped units directly enhance the Army's combat overmatch capability in two Army mission essential tasks: 1) NW enhances small unit combat fighting capabilities by providing unparalleled situational awareness and mission command to dismounted combat leaders through an integrated smart device and JTRS radio and supporting equipment such as battery chargers and power managers. 2) NW enables commanders to combine the elements of combat power (maneuver, firepower, leadership, protection and situational understanding) to engage the enemy and swiftly end tactical engagements and reduce possible fratricide. NW brings the dismounted tactical combat leaders into the Army Network and the acquisition program is aligned with Army Capability Sets and the Army Force Generation Model providing a balanced investment strategy.

"In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities."

Description:

Mounted Soldier System (MSS) provides combat vehicle crew members and commanders in Heavy Brigade Combat Teams (HBCTs) and Stryker Brigade Combat Teams (SBCTs) with critical mission enhancing Command and Control (C2), Situational Awareness (SA), lethality, survivability, mobility, and sustainability through an integrated suite of equipment worn, carried, and used by mounted crew members. Major MSS subsystems include cordless communications, heads-up display, micro-climate cooling as well as Soldier worn clothing, accessories, and personal protective items such as Mounted Soldier over-garment and cold weather gloves, Chemical/Biological/Radiological/Nuclear (CBRN) protection, multi-threat eye protection, ballistic protection, flash/flare protection, and individual weapon holster. MSS performs the systems engineering and Soldier integration to enable mounted crewmen the ability to perform their mounted missions and crew functions safely and efficiently.

	Secondary Distribution	FY 2012	FY 2013	FY 2014 Base	FY 2014 OCO	FY 2014 Total	FY 2015	FY 2016	FY 2017	FY 2018

Description:

Force Provider is a fully integrated system providing critical basic life support for Soldiers deployed in remote areas. A Force Provider module provides billeting, field feeding, and hygiene capabilities that include all the integrated utilities to include climate control, power generation, water and waste water systems, and fuel storage. A single Force Provider module is capable of sustaining 600 personnel. Force Provider is fully containerized for rapid deployment and is transportable by rail, sea, land, and air using C-130, C-141, C-17 or C-5A aircraft. With the addition of Cold Weather Kits (CWKs), the module is deployable in temperatures as low as -15 degrees Fahrenheit. Missions for Force Provider are: base camps for enforcement missions, peace keeping, theater reception/redeployment, intermediate staging base operations, humanitarian aid, and disaster relief; both in theater and in austere environments. Force Provider modules are placed in Prepositioned Stocks to meet critical Commander in Chief (CINC) Operations Plan requirements. These systems are configured with optional Resource and Energy Efficiency Kits, Power Generation Kits, Cold Weather Kits and Prime Power Kits which increase their deployment versatility. The Army Acquisition Objective for Force Provider is 59 systems.

Remarks:
 Module production rates (min, 1-8-5, and max are yearly rates due to the size and complexity of the system. (For manufacturer 1 only). Remaining manufacturer production rates are monthly. "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Description:

The Field Feeding and Refrigeration program provides equipment to conduct tactical food service operations. Field Feeding is a combat multiplier which improves morale and enhances the warfighters physical and cognitive capabilities. Associated with food service operations are storage, preparation, serving and cleanup. Equipment items include: Field kitchens, food sanitation centers, and refrigerated containers. In conjunction with food service personnel and field rations, this equipment comprises the Army Field Feeding System (AFFS) which supports the Army standard of one hot cook-prepared meal per day in the field. This program provides a critical capability that supports Army transformation, the modularity concept and maintains readiness through fielding and integrating new equipment. It enhances the field Soldier's well being and reduces sustainment requirements, related Combat Support/Combat Service Support (CS/CSS) lift demands, combat zone footprint, and logistical support costs.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:

FY14 Base procurement funding in the amount of \$28.096 million procures 133 Refrigeration Container Systems and 84 Assault Kitchens critically needed to fill Army Modular Force requirement shortages, replace or upgrade over aged items, and replace equipment that presents safety hazards. Current Army doctrine calls for providing Soldiers with at least one cook-prepared meal per day. This equipment is essential to support that requirement, eliminate dangerous gasoline burning equipment, and bring food service operations into compliance with Department of Defense (DoD) single fuel policies. Funding procures equipment and materiel to support a balanced investment strategy for the Army's approved force structure and Army Force Generation (ARFORGEN) requirements.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Description:

Advance Tactical Parachute Delivery System (ATPS) represents the US Army's next generation personal parachute system and provides the airborne Soldier with the first wholesale modernization of the tactical parachute system since the 1950s. ATPS includes a completely redesigned system of main and reserve parachutes and an integrated harness system.

Joint Precision Air Drop System (JPADS) represents the US Army's next generation of cargo aerial delivery. The system provides autonomous guidance of loads dropped from 25,000 feet Mean Sea Level (MSL) at increments of 2,000 (2K) and 10,000 (10K) pounds. JPADS will allow precise delivery of critical supplies to the Warfighter on the ground while allowing aircraft delivering payloads to fly at significantly safer altitudes. This line includes both 2K and 10K procurement.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
FY14 Base procurement funding in the amount of \$56.150 million supports critical resupply missions without having to place Soldiers and ground vehicle convoys on the road in high risk situations. JPADS 2K are currently being used in theater, improving the capabilities of the Warfighter in theater by allowing us to resupply soldiers by air in difficult terrain or high risk areas. The Advanced Tactical Parachute System provides a decreased Soldier descent rate with increased system reliability thus increased Soldier safety and effectiveness during personnel static line airborne operations. Funding procures equipment and materiel to support a balanced investment strategy for the Army's approved force structure and Army Force Generation (ARFORGEN) requirements.

Remarks:
 Production rates shown are monthly.
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

"A" in the Delivery Schedule indicated the Contract Award Date.

Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Description:

The Mobile Integrated Remains Collection System (MIRCS) provides a mobile facility for the initial processing and storage of human remains on the battlefield. It is a self-contained International Standard Organization (ISO) compatible shelter with a receiving/processing area, a refrigerated storage area for 16 remains, an administrative area, and storage compartments for operational supplies. It has an on-board power generator, running water, and wastewater storage. It has a screened overflow area to shield remains that are being temporarily stored until they can be processed by the Mortuary Affairs (MA) team. It includes all components necessary to deploy, move, and operate in support of the full spectrum of military and peacetime disaster support operations. The MIRCS transforms MA operations by providing a system that is responsive, deployable, agile, versatile, and sustainable. The MIRCS is transported on its own dedicated Heavy Expanded Mobile Tactical Truck (HEMTT) with a Load Handling System (LHS). The Army Acquisition Objective (AAO) for MIRCS is 174 systems.

The Human Remains Temperature Controlled Transfer Case (HRTC2) will provide means to safely transport remains from theater to Continental United States (CONUS) in a controlled temperature environment. The objective case will use an onboard refrigeration system to maintain internal temperatures. An improved Transfer case (ITC) with insulated walls, an internal temperature display, an on-board document storage compartment, an interface for a standard RFID tag and handles for lifting by up to eight personnel, will be procured as the initial increment under an evolutionary approach to acquire the objective capability as technology matures.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
 FY14 Base procurement funding in the amount of \$3.242 million procures 248 Human Remains Transfer Cases for initial issue to provide an immediate operational capability for the Army's theater level mission. The HRTC2 will replace the current human remains transfer case, a Vietnam War era design that relies on 40-100 pounds of ice to be packed with the human remains. The old case has a single layer aluminum skin which offers no insulating properties, and there is no means for monitoring the internal temperature during transport. It is vital that all human remains arrive at the port mortuary unaltered by the ravages of advanced decomposition that delays the identification process and potentially results in remains that are non-viewable causing further distress to family members. Treating human remains with the utmost care enhances the morale of the soldier and the public. The HRTC will allow for the effective preservation and dignified transport of remains.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

 New FY11 contract First Article Testing on 1 unit in July 2011. Production rates are monthly.
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

[#] FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

The Family Of Engineering Combat and Construction Sets (ECACS) is a family of systems that will support operations by combat and construction engineer teams in urban and rural environments. ECACS sets utilized in urban environment will aid in detection, protection, surveillance, monitoring, evacuation and clearing. ECACS sets utilized in rural environments will allow clearing and troop mobility support areas to include airfields, ports, facilities, and roads.

The Engineer Equipment Set: Urban Operations, Platoon Set (UOpPS) consists of high technology equipment that provides Military personnel with enhanced capabilities to perform missions in urbanized or complex terrain. The components include thermal scopes, remote viewing instruments, detectors for explosives and gases, portable welders, metal cutting torches, rescue tools, mechanical entry tools, winch, and battery operated drills and saws. It provides engineers and others with specialized tools enabling them to conduct operations in urban environments in a safer, more expedient manner. The set will standardize tools, reducing logistical support and provide a Type Classified (TC)-standard Army system. Army Acquisition Objective (AAO) for Urban Operations, Platoon Set (UOpPS) is 887.

The Engineer Equipment Set: Urban Operations, Squad Set (UOpSS) consists of low technology equipment that provides Soldiers with enhanced capabilities to perform missions in urbanized or complex terrain. Components include portal blast shield, collapsible lightweight assault ladders, mechanical entry tools, and rappelling gear. This set supports dismounted engineer Soldiers and others in conducting Military Operations in Urban Terrain (MOUT). The set will standardize tools, reducing logistical support and provide a Type Classified (TC)-standard Army system. Army Acquisition Objective (AAO) for Urban Operations, Squad Set (UOpSS) is 2377.

The Engineer Equipment Set: Hydraulic Electric Pneumatic Petroleum Operated Equipment (HEPPOE) replaces two legacy systems through modernization, consolidation and optimization. The HEPPOE consists of 2 power units that provide hydraulic, electric and pneumatic power in conjunction with a rapid inventory 13 case tool load (Concrete Chain Saws, Hammer Drill, Sump Pump, Pavement Breakers, etc.) that will enhance the ability to operate in an urban area. More specifically, the HEPPOE supports combat and construction engineer tasks across the entire spectrum of the operation area such as clearing buildings for repair and construction, clearing areas around road constructions, port openings and any other urban areas that require operations. Army Acquisition Objective (AAO) for Hydraulic Electric Pneumatic Petroleum Operated Equipment (HEPPOE) is 752.

"A" in the Delivery Schedule indicated the Contract Award Date.

Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

[#] FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

Firefighting Protection Equipment (FPE): The Firefighter Protection Equipment (FPE) is a superior firefighting capability used in critical life and equipment saving situations due to Improvised Explosive Devices (IED) and battle damage. FPE is employed by soldiers as an immediate means to combat vehicle convoy fires and conduct rescue operations to extract trapped and injured soldiers from burning and damaged vehicles. FPE suppresses fires faster which will minimize fire damage and loss of equipment. The FPE set has been given a Joint Designator to support the Army as well as other services. FPE consists three types: Type 1 is a Soldier-portable firefighting set; Type 2 is a skid mounted system, with dual side rails to enhance mobility, capable of being used as a ground or vehicle mounted set; Type 3 is a larger set capable of being mounted as a secondary load to army vehicles or trailers. All three types of FPE provide a superior fire suppression capability for convoy operations in all combat, garrison operations and in all terrains and conditions. FPE equipment supports mounted and dismounted soldiers by increasing firefighting suppression capability at the immediate point of need. Approved Acquisition Objective (AAO) is: Type I 9301, Type II 2048, Type III 543.

Firefighter Individual Requirements Equipment Set (FIRES): The Firefighter Individual Requirements Equipment Set (FIRES) is an assembly of standardized critical life saving firefighting suits and equipment consisting of a Structural, Aircraft and Wildland Firefighting set to support the MOS 12M Army and Department of Defense (DoD) Firefighters. The FIRES equipment provides the Soldier/DoD Firefighter with the capability to safely conduct life, equipment and property saving firefighting missions in all terrains, conditions, combat operations, garrison environments and disaster relief support. The FIRES has the deployability, transportability, versatility and functionality to support early entry expeditionary forces, counter- IED operations, and battle damaged equipment recovery. FIRES provides rapid firefighting capability to commanders at Combat Operating Bases (COB), Forward Operating Bases (FOB) Camp/Station to support all military and sustainment operations. Approved Acquisition Objective (AAO) for FIRES is 868.

Family of High Pressure Breathing Air Compressors (FoHPBAC): The Family of High Pressure Breathing Air Compressors (FoHPBAC) will provide pure breathing air in support of the Self Contained Underwater Breathing Apparatus (SCUBA), Surface Supplied Diving operations, Fire Fighting Missions, and Chemical operations. This set will serve to replace and modernize current equipment and provide current and safe technology for these critical life support systems and supports the following MOS: Engineer Diver (12D), Special Forces Diver (18 series), Rangers combat diver, and 21M Fire Fighters. The FoHPBAC is 100% commercial off the shelf and will consist of three different compressor variants: Type I 26 Cubic Feet per Minute (CFM), 5000 Pounds per Square Inch (PSI) compressor; Type II Diving 6.0 CFM 5000 PSI compressor; and Type II Fire 6.0 CFM 5000 PSI CFM 5000 PSI compressor. Approved Acquisition Objective (AAO) for FoHPBAC; Type I 62, Type II Diving 97, and Type II Fire 98.

ID Code (A=Service Ready, B=Not Service Ready) :	Program Elements for Code B Items:	Other Related Program Elements:
MDAP/MAIS Code(s):		
<p>Underwater Construction Set (UWCS): The Underwater Construction Set (UWCS) provides the MOS 12D Diver the tools. The UWCS includes the following packages: Salvage package used for lifting heavy debris and recovering objects up to 160,000 pounds; Cutting and welding package used for underwater and surface operations; Reconnaissance package with increased capability using Instrument Set, Reconnaissance and Surveying(ENFIRE); Hydraulic tool package used for construction/debris removal and cutting concrete, wood, and metal; and Hand tools and hardware package for surface construction and support tools. Approved Acquisition Objective (AAO) for UWCS is 9.</p> <p>Family of Boats & Motors (FoBaM): The Family Boats and Motors (FoBaM) will replace current outdated legacy systems and support both engineer and special forces in a variety of operations such as: assault landings; reconnaissance and river crossing operations; infiltration and exfiltration; long-range surveillance; amphibious raid, surface swimming, dive, submarine, riverine, anti-mine, bridging, and air operations; underwater construction; underwater repair work; dam and pier repairs; light salvage; and humanitarian aid/disaster relief. The FoBaM will consist of a 3-Person Pneumatic Combat Reconnaissance Craft(P-CRC), 7-Person Inflatable Combat Raiding Craft (I-CRC), 15-Person Inflatable Combat Assault Craft (I-CAC), I-CRC Submersible Outboard Motor, I-CAC Submersible Outboard Motor, and a Rigid Inflatable Combat Support Craft (RI-CSC). Approved Acquisition Objective (AAO) for FoBaM is: 3-person P-CRC 850, 7-person I-CRC 973, 15-person I-CAC 563, I-CRC Outboard Motor 932, I-CAC Outboard Motor 337, and RI-CSC 30.</p> <p>Deep Sea Set (DSS): The Deep Sea Set provides diver-worn critical life support and safety related equipment required to conduct surface supplied diving operations in accordance with all commercial and military safety standards. It includes a full helmet diving assembly that provides air, and protection from pollution, falling debris, and other hazards. It allows for communications with the surface in a dry environment, and is required equipment for construction, cutting and welding, and salvage operations. The set also includes an umbilical assembly that supplies breathing air, depth monitoring and a communications/strength member capable of supporting the diver's weight. The communications assembly allows three divers and the diving supervisor to communicate. The set can be used to a depth of 250 feet and is the only system that protects the diver while conducting heavy construction and salvage operations. Approved Acquisition Objective (AAO) for DSS is 9.</p> <p>Diving Equipment: The critical life support and safety related sets include Underwater Construction Set; Underwater Photo Set; Supervisor, Propulsion and Recovery Equipment SCUBA (SPARES) Set; Type I/ II Air Compressor; Surface Swimmer Support Set; Individual Swimmer Support Set; Deep Sea Set; and Closed & Open Circuit Set. Engineer divers support Corps/Theater level operations as a force multiplier by performing current diving missions in South West Asia to include debris removal, bridge construction, salvage operations, underwater mine and explosive detection, and personnel recovery operations. Special operations dive teams use the sets for clandestine combat waterborne infiltration/ex-filtration and to aid in search and recovery operations.</p> <p>Pioneer Support Set: This tool set will support other Pioneer sets by providing a more tailored tool load to the specific needs of the Soldier. Components include drum de-header, pry bars, nibbler, posthole digger, pulleys, rakes, shovels, tarps, winch, sharpener for chain saw blades and other equipment. Approved Acquisition Objective (AAO) for the Pioneer Support Set is 1,748.</p> <p>Pioneer Sapper Set: Provides tools and equipment for air assault and light engineering squads to perform expedient bridge repair, construct field fortifications and erect barbed wire entanglements; construct, maintain and rehabilitate crossing site entrances/exits and bypasses, and construct combat trails. Some components within the kit are shovels, picks, axes, saws, bolt cutters, gloves, post hole digger, files, hammers, machetes, pliers, rappelling kits, assault ladders, mine bonnets, and mine grapnels. Approved Acquisition Objective (AAO) for Pioneer Sapper Set is 1,071.</p> <p>Pioneer Land Clearing and Building Erection Set: Provides safety equipment for working above ground and for chain saw operation. The set is configured with individual hand and pioneer tools to enable engineer squads to perform individual and collective tasks in a timely manner, such as construction of field fortifications and protective shelters; construction operations in restricted terrain, construction of individual Soldier and critical asset survivability positions; obstacle emplacement and obstacle marking. Approved Acquisition Objective (AAO) for Pioneer Land Clearing and Building Erection set is 805.</p> <p>Hazard Identification and Marking Set: Hazard Identification and Marking Set will assist Army units in the performance of Standard North Atlantic Treaty Organization Agreement (STANAG) in the Theater of Operation (TO) for the marking of minefields and hazards encountered across the entire spectrum of operations. The set can be used by all Soldiers with a required task assault and mobility operations to mark minefields, breach lanes, and hazards found in the TO. The set consists of marking flags, lights, and similar items that are used to clearly identify and mark hazards in the field. Approved Acquisition Objective (AAO) for Hazard Identification and Marking Set is 1,653.</p>

Vertical Skills Engineer Construction Kit (VSECK): The VSECK effort combines eight existing sets into a family of six systems which include hand and power tools used by carpenters, plumbers, pipefitters, electricians, and concrete & masonry craftsmen. VSECK systems leverage the latest in technological advances to support tactical missions providing means for security, stability, transition and reconstruction across Unified Land Operations. The family of VSECK enables Soldiers to efficiently respond to catastrophic events requiring humanitarian aid by enabling civil authority and shaping recovery efforts. Approved Acquisition Objective (AAO) for VSECK is: Type I - Carpenters Tool Kit Squad (CTKS) 5,517; Type II - Carpenters Supplemental Tool Kit (CSTK) 830; Type III - Carpenters Tool Kit (CTK) 314; Type IV - Electricians Tool Kit (ETK) 928; Type V - Mason & Concrete Tool Kit (MCTK) 892; Type VI - Plumbers & Pipefitters Tool Kit (PPTK) 898.

This buys a variety of soldier portable Engineer kits such as Plumbers Kit, Carpenter Tool Kit Squad and other kits.

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

The Family of Petroleum and Water Distribution Systems supports the Army's mission to supply bulk fuel and water to all Department of Defense (DoD) forces in the various theaters of operation. These systems support the refueling of aircraft, ground vehicles, and other Army equipment. Distribution Systems are comprised of hoses, pumps, tanks, filter separators, fittings, couplings, and nozzles.

The Modular Fuel System (MFS) is the brigade bulk fuel storage and distribution system consisting of 14-2500 gallon fuel Tank Rack Modules (TRM) and 2-600 GPM Pump Rack Modules (PRM), for a total capacity of thirty five thousand (35K) gallons. This system, when supported by 8-Heavy Expanded Mobility Tactical Truck-Load Handling System (HEMTT-LHS) or Palletized Load Handling System (PLS) trucks and 8-PLS or (LHS) trailers, is 100 percent mobile. The MFS reduces environmental requirements for berm and berm liners and material handling equipment. It can be operational in one hour over any type terrain. The MFS Tank Racks offer flexibility for line haul distribution of bulk fuel, Refuel on the Move (ROM) and retail fuel distribution. The Army Acquisition Objective (AAO) is 2,764 TRMs and 27 PRMs. The MFS requirement for 9 Stryker Brigade Combat Teams (SBCTs) is 126 TRMs and 18 PRMs (5 PRMs are being procured for the school house and 2 PRMs will be used as Operational Readiness Floats). The remaining TRMs (2,638) will support the Brigade Combat Teams and other units to include Field Artillery, Maneuver Enhancement Brigades, and Quartermaster Companies.

The Load Handling System (LHS) Compatible Water Tank Racks System (Hippo) is a 2000 gallon potable water tank mounted on an International Standards Organization (ISO) frame flat rack. This modular configuration gives the Hippo the capability of rapid deployment and recovery. It is outfitted with a water pump, hose reel, and filling station. It is used for bulk load and discharge, retail distribution, and bulk storage of potable water. Its prime mover is the Heavy Expanded Mobility Tactical Truck-Load Handling System (HEMTT-LHS), and Palletized Load System (PLS) Trailer. Hippos will replace the Semi-trailer Mounted Fabric Tank (SMFT) and most Forward Area Water Point Supply Systems (FAWPSS). AAO is 3,285 systems.

The Fuel System Supply Point (FSSP) is a family of systems which consists of three storage capacities: 120K, 300K, and 800K gallon systems. This system is a bulk fuel receiving, issuing, and storing facility consisting of a 600 Gallons per Minute (GPM) pump, 350 GPM pump, 350 GPM filter separator and collapsible fabric storage tanks. The tanks vary in size from 20,000 gallons to 210,000 gallons. The 120K FSSP has 6 ea 20K fuel bags and 2 ea 350 GPM pumps. The 300K FSSP has 6 ea 50K fuel bags and 2 ea 350 GPM Pumps. The 800K FSSP has 4 ea 210K fuel bags and 2 ea 600 GPM pumps. AAO: FSSP 120K is 260 systems, FSSP 300K is 144 systems, and FSSP 800K is 58 systems.

The Camel II is an 800 gallon unit level potable water system mounted on a M1095 trailer. It replaces the Water Buffaloes on a 2:1 ratio. Enhancements over the water buffalo include a heater which allows disbursement of temperate water to meet a variety of climate temperature variations. The Camel II provides up to two days of supply (DOS) of potable water for drinking and other purposes. Select systems will be fielded first to Stryker Brigade Combat Team (SBCT) units. AAO is 2,669 systems.

Justification:
 FY14 Base funding in the amount of \$60.612 million supports the procurement of the Modular Fuel System (MFS) Tank Rack Modules (TRMs) and Hippo Water Distribution System. Distribution Systems support the Stryker Brigade Combat Teams (SBCTs), Brigade Combat Teams, Field Artillery, Maneuver Enhancement Brigades, and the Petroleum and Water Quartermaster (QM) modular force warfighting capabilities. These systems are the Army's primary means of distributing and issuing retail and bulk petroleum and water. The Army cannot fight without clean fuel and water. These systems enable the Army to achieve its transformation vision by providing highly mobile and self-sustaining equipment to hostile theaters of operation. The Army has responsibility for all inland distribution of fuel and water to include support to other services. The ability to rapidly, efficiently, and safely distribute fuel on the battlefield is a critical combat enabler. Funding supports a balanced investment strategy for the Army's approved force structure and Army Force Generation (ARFORGEN) requirements.

"A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Description:

Combat Support Medical represents the equipping component of a broad band of operational medical and health service support (hospitalization, combat stress, dental, veterinary, optical, and preventive medicine) capabilities that promote, improve, conserve, and restore the mental and physical well being of warfighters across the range of military operations. The equipping component is illustrative of the technologically advanced medical/surgical equipment, medical materiel, and nonmedical equipment required in our Combat, Combat Support and Combat Service Support force structure.

Combat Support Medical equips the Army's medical personnel to provide medical and rehabilitative care from first responder, to forward resuscitative care, to theater hospitalization, and en route care in the Joint Area of Operations.

Combat Support Medical modernizes, converts, and recapitalizes the Army Medical Department's (AMEDD's) Table of Organizational Equipment (TOE) force structure with deployable medical platforms. These combat service support systems support medical force structure at all echelons of care. This program resources the acquisition of all categories of medical equipment including surgical, combat stress, medical evacuation, dental, laboratory, radiology, optometry and new medical technology.

The equipment supports the capabilities of the AMEDD field units to support the Army's full spectrum of operations including offensive, defensive, stability and support and Chemical, Biological, Radiological, Nuclear, and high yield Explosives (CBRNE) Consequence Management Response Force (CCMRF).

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
 FY14 base procurement funding in the amount of \$22.042 million procures medical equipment and materiel to support the AMEDD's balanced investment strategy for the Army's approved force structure and Army Force Generation (ARFORGEN) requirements. It provides advanced medical equipment necessary to ensure essential care of combat casualties throughout the range of military operations and includes all care and treatment necessary to return casualties to duty (within the theater evacuation policy) or begin initial treatment and stabilization.

Description:

The Medical Evacuation (MEDEVAC) Mission Equipping Package (MEP) consists of a group of two subsystems and equipment being installed on recapitalized legacy MEDEVAC UH-60A/L Black Hawk helicopters that provide the operational capabilities required for aeromedical evacuation across the MEDEVAC fleet. The systems include the Interim MEDEVAC Mission Support System (IMMSS) patient handling system and the Medical Mission Sensor FLIR for the UH-60 helicopter.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
FY14 base funding in the amount of \$35.318 million provides advanced medical equipment necessary to ensure essential initial treatment, stabilization and care during rapid aeromedical evacuation of critically wounded combat casualties to Combat Support Hospitals (CSH).

Remarks:
The Interim MEDEVAC Mission Support System (IMMSS) is a patient handling system that includes seat pallets, seats, interior components, and a litter lift system. Includes the Smart Window – This new window will replace the older bubble window on the cargo door, and the Internal Communications System (ICS) Relocation Kit - the ICS must be located further to the rear of the helicopter to accommodate the new interior design. The MEDEVAC Mission Sensor (MMS) is a Forward Looking Infra-Red (FLIR) sensor that will be used as a patient location sensor. MMS is critical to the continuous capability for night and adverse weather operations.

Description:

The Mobile Maintenance Equipment Systems (MMES) employ a system of systems approach to provide two-level maintenance capability to the Warfighter. Seven inter-connected maintenance systems distributed throughout the Army at multiple levels and echelons provide a holistic repair capability in all environments. This approach meets the Army's two-level maintenance philosophy and supports the current force while also providing modular configurations to meet the specific needs of the Army maintainer in today's transforming environment. The MMES family of systems includes Shop Equipment Contact Maintenance, Forward Repair System, Standard Automotive Tool Set, Shop Equipment Welding, Hydraulic Systems Test and Repair Unit, Metal Working and Machining Shop Set, and Armament Repair Shop Set.

Shop Equipment Contact Maintenance (SECM) is a responsive, agile, mobile maintenance system that traverses the battlefield to the site of a disabled combat system and then provides on-site maintenance capabilities. The SECM consists of a fabricated enclosure mounted on a separately authorized armor capable, M1152 High Mobility Multi-Purpose Wheeled Vehicle (HMMWV). The system integrates commercial off the shelf (COTS) and non-developmental item (NDI) components and equipment designed to support engineer and ordnance maintenance units. The SECM has industrial quality tools, light duty cutting and welding equipment, and an on-board compressor and power inverter to support forward repair of weapons systems. Equipment is stored in a lockable enclosure. The SECM uniquely provides a mobile system with the required tools and equipment for rapid and effective on-site repair. The SECM provides forward mobile maintenance and repair, which allows the return of combat, tactical, ground support, and aviation equipment in maneuver and supporting units to operational condition or allows them to leave the battlefield for comprehensive repair. With the up armored SECM, systems and Soldiers do not have to wait for recovery vehicles to arrive and remove the system from the battlefield, thus reducing risk to the Soldiers and equipment. Approved Acquisition Objective (AAO) is 3,998.

The Forward Repair System (FRS) is a high-mobility, forward maintenance system that reduces repair time. The FRS places tools, diagnostic test equipment, and heavy lift capability in one package to provide key maintenance support in the forward battle area through the brigade support battalion, field support company or maintenance field company. The FRS is configured with a 5.5 ton lift capacity with a 14 ft. radius crane capable of removing and replacing major components on all models of military vehicles. The FRS has its own air source for air tools and inflatable lifting devices, limited spot welding and cutting capabilities, a tailored set of industrial quality hand and power tools, and its own on-board power source. The power source, a 35 kW generator, provides power sufficient to operate the crane hydraulics, welding equipment, power tools, and the on-board electrical system. The FRS provides storage space for the Maintenance Support Device (MSD), General Mechanics Tool Kits (GMTK), Battle Damage Assessment and Repair (BDAR) kits, combat spares, and other supporting equipment. The FRS meets the maneuver commander's need for a repair system that is responsive, effective, and reduces the number of systems requiring evacuation. Approved Acquisition Objective (AAO) for the Forward Repair System is 2,134.

MDAP/MAIS Code(s):

Standard Automotive Tool Set (SATS) is a robust, mobile automotive maintenance set developed to support the Army's two level maintenance structure, modular, and expeditionary units. It contains an electric power generator, Environmental Control Unit (ECU), Signal Entry Panel (SEP), and an ergonomic storage space for a complete tool load of industrial quality tools having a life-time warranty. The SATS tool load includes a base tool set and Field Maintenance Modules (FMMs), allowing the system to be tailored to support heavy, medium, and light combat units. SATS requires one truck and two operators to move the entire system. It is in a ISO 8x8x20 container that can be mounted on a flat rack or a trailer making it a versatile and highly mobile maintenance asset. The SATS will be transported (towed) by a tactical cargo truck from the Family of Medium Tactical Vehicles (FMTV) and is C130 deployable. It is designed to be accessed while trailer-mounted or it can be off loaded. SATS communication capability allows data and voice connections for Global Combat Support System - Army (GCSS-A). Its common interfaces and Army standard communications systems/equipment provide for voice (Frequency Modulation (FM), Mobile Subscriber Equipment (MSE), commercial) and data information as well as interface to military/commercial Satellite Communication (SATCOM.) The SATS is used by maintenance soldiers performing scheduled and unscheduled automotive maintenance tasks. Additional SATS modules will be developed as the system matures. Examples of future modules could include modules to support transition to a two level maintenance system, system specific special tools, and force-design specific mission modules. Approved Acquisition Objective (AAO) is 4,045.

The Hydraulic Systems Test and Repair Unit (HSTRU) is a robust hydraulic repair system capable of supporting four trained ordnance/engineer soldiers at one time to conduct maintenance operations. It provides the capability to fabricate industry standard crimp-style hydraulic replacement hoses of all sizes, types, and end configurations as required to restore the hydraulic systems on battle damaged or otherwise non-mission capable equipment. HSTRU also provides the ability to fabricate industry standard steel replacement hydraulic tubes used in brake lines and other high pressure applications and bends and flares these tubes as required to create a proper replacement item. The HSTRU includes an on-system diagnostic test meter that is used for troubleshooting hydraulic problems on the supported platforms. It is a trailer-mounted system with a weather tight enclosure that is configured for rapid setup for use at the point of need. It can be deployed forward on the battlefield for battle damage repair or operated in the motor pool. The HSTRU is highly transportable on or to the battlefield by light tactical vehicle towing, highway trucks, helicopter sling load, C-130 and larger fixed-wing aircraft, lighterage and larger marine vessels, and rail. Approved Acquisition Objective (AAO) is 433.

The Metal Working and Machining Shop Set (MWMSS) program is a Shelter Mounted Set that assembles and packages tool load configurations based on the 91E (Allied Trades) Military Occupational Specialty (MOS). The MWMSS assembles and packages a tool load configuration to replace multiple obsolete LINs without losing any capability while reducing the logistics footprint. MWMSS increases safety and supportability for Allied Trades soldiers and delivers state of the art machining capabilities using two module types, Type I and Type II. Type I contains a Computer Numeric Controlled (CNC) Lathe, Mill Drill, Multi-Process Welding, Thermal Cutting equipment, Air-Arc Gouging, air compressor, Mobile Electric Power (MEP) generator for shop power, Environmental Control Unit (ECU), and an assortment of hand/air tools. Type II augments Type I and contains a CNC Milling Machine, Plasma table, ECU, and an assortment of hand/air tools. The MWMSS is transportable by standard ground (PLS/LHS), air (C-130), rail and sea assets. SSN: G05315, CARDS: 06080. Approved Acquisition Objective (AAO) of MWMSS is 259 Type I and 225 Type II.

The Armament Repair Shop Set (ARSS) provides technological advancements and professional-grade tools with lifetime warranties, which will bring a savings to the Army for many years. The ARSS reduces six LINs to one and equips our forces with the most current and accurate tools to complete the mission while performing maintenance on the latest technologically advanced weaponry from small arms to field artillery. The consolidation of the six Line Item Numbers (LINs) to one results in a reduction from five tactical vehicles required to transport the individual shop sets to just one tactical vehicle to transport the MWMSS. In addition, the MWMSS eliminates a 51% tool redundancy across the previous six armament shop sets while reducing 43% of the armament repair tools in the field. The ARSS significantly improves on-site maintenance capability with increased proficiency and deployability. The ARSS provides a field/sustainment level maintenance and repair support platform for armament weapon systems to support units across the full spectrum of military operations. By providing on-system maintenance repairs to weapon systems and/or components as far forward as possible on the battlefield, ARSS enables major combat systems to quickly return to the fight. The ARSS will be fielded to the Infantry Brigade Combat Teams (IBCTs), Heavy Brigade Combat Teams (HBCTs), Stryker Brigade Combat Teams (SBCTs), Support Maintenance Companies (SMCs), Component Repair Companies (CRCs), and Forward Support Companies (FSCs). Army Acquisition Objective (AAO) of ARSS is 1072

Appropriation / Budget Activity / Budget Sub Activity: 2035A: Other Procurement, Army / BA 03: Other Support Equipment / BSA 45: Maintenance Equipment		P-1 Line Item Nomenclature: G05301 - Mobile Maintenance Equipment Systems
ID Code (A=Service Ready, B=Not Service Ready) :	Program Elements for Code B Items:	Other Related Program Elements:
MDAP/MAIS Code(s):		
<p>The Mobile Maintenance Equipment Systems are maintenance multipliers that mobilize mechanics and maintenance equipment to repair damaged light, medium, and heavy Combat and Combat Support systems in the Brigade Combat Teams (BCTs) and Combat Aviation Brigades (CABs) as close to the front lines as is safely possible. The MMES significantly increases the capability of forward maintenance units to conduct necessary battlefield repairs. With the MMES, systems and Soldiers do not have to wait for recovery vehicles to arrive and remove the system from the battlefield, thus reducing risk to the Soldiers and equipment.</p> <p>FY14 Base procurement dollars in the amount of \$0.400 million supports 3 HSTRUs fielding to Heavy, Stryker, and Infantry Brigade Combat Teams (BCTs), Combat Aviation Brigades (CABs), Engineer Battalions, Maneuver Enhancement, Seaport Operations, Transportation Companies, and the National Guard. The HSTRU is the only approved hydraulic repair system in the Army inventory and there are significant shortages that are impacting equipment readiness.</p> <p>FY14 Base Procurement dollars in the amount of \$15.000 million supports 13 MWMSS sets (13 Type I and 13 Type II) to be fielded to the Ordnance School as well as Active, Guard and Reserve units. MWMSS represents a significant upgrade in technology and replaces several outdated LINs.</p> <p>FY14 Base procurement dollars in the amount of \$4.027 million support 9 ARSS to be fielded to the Infantry Brigade Combat Teams (IBCTs), Heavy Brigade Combat Teams (HBCTs), Stryker Brigade Combat Teams (SBCTs), Support Maintenance Companies (SMCs), Component Repair Companies (CRCs), and Forward Support Companies (FSCs). ARSS replaces six Line Item Numbers (LINs) and provides the capability for forward maintenance for multiple weapon systems.</p> <p>In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.</p>

"A" in the Delivery Schedule indicated the Contract Award Date.

Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Remarks:
 Production rates shown are monthly.
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Remarks:
 Production rates shown are monthly.
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

Items Less Than \$5 Million (Maintenance Equipment): Develop, acquire, field, and sustain maintenance support equipment, such as, the Measuring Machinist Tool Kit, and the Load Bank System Tactical Electric Power, with improved, modernized, standardized, and centralized maintenance sets, kits, outfits, and tools (SKOT). This maintenance equipment enables units to properly maintain equipment and perform the mandatory maintenance operations as well as perform diagnostics and post verification testing on all small and medium tactical generators (2 to 60 kw) which enable readiness of weapons systems. This equipment allows soldiers to properly and adequately maintain reliable systems that meet Soldier safety, supportability, and mobility requirements, thereby reducing the risk to the warfighter.

The Measuring Machinist Tool Kit (MMTK) provides necessary components for general machinist's use. The set consists of a tool box and 33 tools (i.e. gages, calipers, rulers, hammer, punches, etc.). Army Acquisition Objective (AAO) for MMTS is 2400.

The Load Bank System Tactical Electric Power (TEP) are soldier-portable systems required for performing diagnostics and post verification testing on all small and medium tactical generators (2 to 60 kw) for 99% of the Army's tactical fleet. Load Banks verify the generator can provide 100% of its rated power output to critical mission loads. Load banks are required to: Perform accurate diagnostic and post repair performance verification testing; verify generator set can provide 100% of rated power output; allows maintainers to 'burn out' fuel/carbon accumulations due to under-loading the generator set for extended periods. Using Load Banks to load test generator sets is an essential function that Army maintenance units perform for diagnostic purposes and post repair verification testing that ensures the set can provide its rated power output and that the power is clean without power surges that can damage equipment. Maintenance units need the load bank testing capability to diagnose failures during the troubleshooting process and to verify generator sets are operating properly after completing repairs. This is an Army requirement expressed in generator set field level maintenance technical manuals. There is a recognized TOE/Modified TOE (MTOE) requirement for this equipment. Army Acquisition Objective (AAO) for Load Bank System Tactical Electric Power (TEP) is 718.

AR	Quantity	-	-	21	-	21	48	32	19	47
	Total Obligation Authority	-	-	0.198	-	0.198	0.223	0.223	0.223	0.223

Justification:
 FY14 Base funding in the amount of \$3.860 million will procure 267 Measuring Machinist Tool Kits, and 80 Load Bank System Tactical Electric Power (TEP). The maintenance equipment is essential for units to properly maintain equipment and perform the mandatory maintenance operations and perform diagnostic testing which maintain the readiness of weapons systems. This equipment allows soldiers to properly and adequately maintain vehicles and systems. Maintained systems perform properly, improve safety and reduce the risk to the warfighter. Army modularity requires reliable systems that support soldier safety, supportability, and mobility requirements. SKOT systems require continuous review, revision, and upgrades to support modularity requirements.

Description:

Graders are used by Horizontal Companies, Engineer Support Companies, Clearance Companies, Asphalt Teams and Quarry Platoons in support of engineer requirements. The grader is diesel-engine driven, pneumatic tired, with articulated frame steering. It is equipped with a power shift transmission, fully enclosed cab, hydraulically operated blade and scarifier. The grader may be driven from one work site to another and is used for grading, shaping, bank sloping, ditching, scarifying, general construction and maintenance of roads and airfields. A Basis of Issue Plan (BOIP) increase was approved in FY11 increasing the Army Acquisition Objective (AAO) to 786. The Grader is a commercial off the shelf (COTS) program that is considered a Critical Dual Use (CDU) system enabling and supporting Defense Support to Civil Authorities (DSCA) operations.

Justification:
 FY 2014 Base procurement funding in the amount of \$2.000 million supports procurement and fielding of 10 Grader virtual trainers in the Active Army, Army Reserve, and National Guard institutional training sites. The virtual trainers replicate the fit, form and function of the Grader to train Soldiers on the basic principles of operating the equipment to include locations and functions of controls and instruments needed to operate the equipment. They improve training efficiencies in teaching and retraining the basic ground engagement techniques with reduced cost for the equipment, maintenance support, fuel consumption, and training area. Virtual trainers permit the instructor or supervisor to train more Soldiers at one time and in inclement weather conditions. It provides the Soldier more familiarity and greater competence before operating the actual Grader thereby increasing his training retention while reducing safety risks.

IAW Section 1815 of the FY 2008 NDAA this item is necessary for use by the active components and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

The Skid Steer Loader Family is a lift and load system with multiple attachments (auger, paver breaker, bucket and forklift), capable of executing a wide range of mobility, counter mobility, general engineering and force protection/survivability missions. Engineer squads are approximately 25% more productive with a SSL while performing field engineering Mission Training Plan Tasks (IAW a Army Concept Experimentation Program). The SSL Family is a time and resource saving tool for completing a variety of labor and manpower intensive tasks.

The Type II Skid Steer Loader (SSL II) is a heavy tracked SSL with slightly less maneuverability but a greater lifting capability than the Type III. The SSL II enables construction units (Combat Support Equipment Company (CSE)), Combat Heavy, Combat Support Company (CSC), Pipeline Construction Company, Utilities Team, Quarry Team, Well Drilling Team and Port Opening) to complete many tasks now performed by the Small Emplacement Excavator (SEE). The Type II SSLs will be used for airfield damage repair, unmanned aerial vehicle (UAV) landing area development and repair, individual soldier fighting positions, obstacle emplacement and supporting pipeline pump station placement.

The Type III SSL is an air droppable, light SSL, with track over wheel capability aimed at meeting the combat mission needs of Light, Airborne, and Air Assault Engineer units. Task emphasis is on general construction, lift and loading, base camp construction and maintenance. It will also be used to lift palletized loads of engineer construction materials. For force protection and force sustainment, the SSL will perform boring, lifting, loading and light leveling operations. In support of major construction projects, the Type III SSL will be used to assist in construction of protective shelters/bunkers, helipads and other structures and facilities; and assist with logistics base operations. The Skid Steer Loaders are a commercial off the shelf (COTS) program.

The Army Acquisition Objective is 2,172 (SSL II: 801/SSL III: 1,371). This program is considered a Critical Dual Use (CDU) system enabling and supporting Defense Support to Civil Authorities (DSCA) operations.

Description:

The 14-18 Cubic Yard Heavy Scraper will be used by Horizontal Construction Companies. It is a self-propelled, open bowl, two axle, single diesel engine driven, articulated frame steer vehicle with pneumatic tires. The self-propelled Scraper can work alone and self load, but at reduced production capacity. It provides a hauling and dumping capability to perform efficient earthmoving tasks in support of earthmoving projects. The Heavy Scraper provides the Army Engineers essential equipment to perform their road and airfield construction and site preparation missions. The Army Acquisition Objective (AAO) is 499. This Scraper is a commercial off the shelf (COTS) program.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.
 Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
 FY 2014 Base funding in the amount of \$36.078 million procures 52 Heavy Scrapers in support of the Active Army, National Guard and Reserve Units. The Scraper provides the Army's forces improved mobility and deployability to meet Army requirements. New Scrapers will provide updated technology, electronics, and hydraulics which will increase the current readiness and reduce the logistics footprint. This program is considered a Critical Dual Use (CDU) system enabling and supporting Defense Support to Civil Authorities (DSCA) operations.

The FY2014 Base procurement funds will also procure 34 Heavy Scraper virtual trainers in the Active Army, Army Reserve, and National Guard institutional training sites. The virtual trainers replicate the fit, form and function of the Heavy Scraper to train Soldiers on the basic principles of operating the equipment to include locations and functions of controls and instruments needed to operate the equipment. They improve training efficiencies in teaching and retraining the basic ground engagement techniques with reduced cost for the equipment, maintenance support, fuel consumption, and training area. Virtual trainers permit the instructor or supervisor to train more Soldiers at one time and in inclement weather conditions. It provides the Soldier more familiarity and greater competence before operating the actual Heavy Scraper thereby increasing his training retention while reducing safety risks.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Description:

The Engineer Mission Module, Water Distributor is one of four Engineer Mission Modules which are demountable, systems capable of repeated transport, operation and use with Load Handling System (LHS) type trucks and associated trailers. The four Engineer Mission Modules (EMM) are the: EMM-Dump Body (DB), EMM-Concrete Module (CM), EMM-Bituminous Distributor (BD) and EMM Water Distributor (WD).

The Engineer Mission Module - Water Distributor (EMM-WD) is a de-mountable 3000 gallon module which is transported on the Palletized Loading System (PLS) truck and Palletized Loading System Trailer (PLST). The EMM-WD will provide capabilities used to execute general construction missions in support of military operations or other national goals. The EMM-WD system consists of one PLS and PLST, two water distributor modules, and one Universal Power Interface Kit (UPIK). The EMM-WD provides a means of spreading measured amounts of water for dust control, applying soil additives and dust control chemicals, providing additional water and fire fighting support capability, and operating as a wash rack facility. This capability provides execution of general construction missions in the areas of road building, airfield construction, soil stabilization to support compaction missions, and dust control abatement. The EMM-WD will be fielded to Horizontal Construction Units, Asphalt and Quarry Teams, Quarry Platoons, and the Army training base. The Army Acquisition Objective (AAO) has decreased to 270 systems.

This program is considered a Critical Dual Use (CDU) system enabling and supporting Defense Support to Civil Authorities (DSCA) operations.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Justification:
FY 2014 Base procurement dollars in the amount of \$9.721 million supports the procurement of 13 PLS Trucks and Trailers only. The EMM-WD provides forces an array of capabilities that enhance mission accomplishment and support essential tasks that are critical to Enable Theater Access (ETA). Coupled with the mobility of the PLS truck and trailer, the EMM-WD is ideally suited to reach locations previously difficult to access. Additionally, the EMM-WD allows the flexibility to rapidly pick up and move to various locations while supporting increased operational tempo. Funding supports a balanced investment strategy for the Army's approved force structure and Army Force Generation (ARFORGEN) requirements.

Remarks:
 Production rates shown are monthly.
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Description:

Family of Compaction Systems includes: High Speed Compactor (HSC), Vibratory Roller, Type I and Vibratory Roller, Type II (R03301), Dual Steel Wheel Roller (DSWR) (R03500), Towed Pneumatic Roller (TPR) (R03402), and Vibratory Plate Compactor (VPC) (M08900).

The High Speed Compactor (HSC) is a self propelled tamping machine used for compaction of base materiel for roads and airfield runways.

The Vibratory Roller, Type I and Type II are self propelled, tamping machines for compacting during the construction of roads, airfields and dams.

The Dual Steel Wheel Roller (DSWR) is a tandem steel wheeled roller with vibratory mechanism use for compaction of asphalt, chip and seal surfaces.

The Towed Pneumatic Roller (TPR) is a tow behind compaction system equipped with 13 pneumatic-tires, used by airborne units for horizontal construction missions requiring dense compaction of various types of soil from natural run to modified mixtures.

The Vibratory Plate Compactor (VPC) is a hand guided and controlled reversible vibrator plate compactor capable of use as a general purpose trench, curb, and backfill compactor and can be used to patch asphalt.

Description:

The Hydraulic Excavator Type I (HYEX-I) is a commercial off-the-shelf (COTS) vehicle with minor military modifications. It is diesel engine driven, self-propelled, track mounted, hydraulically controlled system, equipped with a hydraulic quick coupler system for use with a wide variety of attachments. The support equipment include a hydraulic impact breaker, plate compactor, crushing unit, barrier grapple, arm extension for dredging, and a variety of buckets for digging, dredging, and trenching. The HYEX-I provides engineer units a multi-functional construction capability that can dig, trench, dredge, scoop, lift, dump, and perform demolition to structures. The HYEX-I also has the capability to accept a Crew Protection Kit in the form of a replaceable armor C-Kit cab for contingency operations. The HYEX is fielded to Horizontal Construction Companies, Multi-Role Bridge Companies, and the TRADOC training base. The HYEX Type I Army Acquisition Objective (AAO) is 457 systems.

Justification:

FY 2014 Base procurement dollars in the amount of \$50.122 million supports an increased change in the Basis of Issue Program (BOIP) to procure an additional 109 HYEX and associated support items.

The FY 2014 Base procurement funds will also procure HYEX virtual trainers in the Active Army, Army Reserve, and National Guard institutional training sites. The virtual trainers replicate the fit, form and function of the HYEX to train Soldiers on the basic principles of operating the equipment to include locations and functions of controls and instruments needed to operate the equipment. They improve training efficiencies in teaching and retraining the basic ground engagement techniques with reduced cost for the equipment, maintenance support, fuel consumption, and training area. Virtual trainers permit the instructor or supervisor to train more Soldiers at one time and in inclement weather conditions. It provides the Soldier more familiarity and greater competence before operating the actual HYEX, thereby increasing his training retention while reducing safety risks.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Description:

This line covers both the Medium T9 Tractor, Full Track and Light T5 Tractor, Full Track. These are Bulldozers and are used to perform dozing, rough grading, cutting and filling, and ripping in support of general engineer construction tasks, to build and maintain roads, airfields and to build and support tactical missions. When equipped with armor protection, they fulfill the military requirements for mine clearing and military specific operations in a hostile environment. These Bulldozers are equipped with a powershift transmission and hydraulically operated semi-U type dozer blade. The dozers have either a winch or a ripper. Due to the low ground bearing pressure, the Dozer possesses the capability to work in adverse underfoot conditions and is normally one of the first pieces of construction equipment on a job site. The T9 Medium Tractor, Full Track, is a low speed, medium draw bar pull bulldozer with a blade and is a basic item of earthmoving equipment used for heavy dozing and clearing. The T-5 Tractor, Full Track is a smaller, air mobile, air droppable dozer used in airborne operations for construction and maintenance emplacements, roads and airfields. The Army Acquisition Objective (AAO) is 1,498 (T-9: 1274/T-5: 224). This is a commercial off the shelf (COTS) program. This program is considered a Critical Dual Use (CDU) system enabling and supporting Defense Support to Civil Authorities (DSCA) operations.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
 The FY 2014 Base procurement funds in the amount of \$28.828 million will procure 84 Medium T9 Tractor, Full Track to be used by Engineer Support Companies, Horizontal Companies, Clearance Companies, Quarry Companies, Equipment Support Platoons, and Multi-Roll Bridge Companies in Active Army, Army Reserve and National Guard units. The tractors provide the Army's forces improved mobility and deployability to meet Army Modular Force requirements. New Tractor, Full Track will provide current technology, electronics and hydraulics which will increase the current readiness rates, increase operational effectiveness and reduce the logistics footprint. The funding supports a balanced investment strategy for the Army's approved force structure and Army Force Generation (ARFORGEN) requirements.

The FY2014 Base procurement funds will also procure 18 Tractor, Full Track virtual trainers in the Active Army, Army Reserve, and National Guard institutional training sites. The virtual trainers replicate the fit, form and function of the Tractor, Full Track to train Soldiers on the basic principles of operating the equipment to include locations and functions of controls and instruments needed to operate the equipment. They improve training efficiencies in teaching and retraining the basic ground engagement techniques with reduced cost for the equipment, maintenance support, fuel consumption, and training area. Virtual trainers permit the instructor or supervisor to train more Soldiers at one time and in inclement weather conditions. It provides the Soldier more familiarity and greater competence before operating the actual Bulldozer, thereby increasing his training retention while reducing safety risks.

IAW Section 1815 of the FY 2008 NDAA this item is necessary for use by the active components and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

The All Terrain Cranes (ATC) Type I/II are self deployable systems capable of traveling on both primary and secondary roads with off road maneuverability. The ATC Type I provide light to medium lift capabilities at a capacity of 25 tons. The ATC Type II provides heavy lift capabilities required by the Engineer force at a capacity of 50 to 60 tons. The current program funding will acquire only the ATC Type II system. The ATC Type II provides mobility, survivability, and counter-mobility support across the entire range of theater operations supporting Maneuver BCTs, and/or Expeditionary Engineer Brigades. The ATC Type II supports Joint Force capabilities to repair and expand operating capacities of Ports of Embarkation (POE), Intermediate Staging Bases/Forward Operating Bases, Ports of Debarkation (POD), entry points and bridging in and around the battle space. The ATC Type II provides a capability to load and unload containers; support base camp construction, force protection, overhead lift operations; assist in the loading of earth, sand, gravel, rock, and bulk-type materials; drive steel, concrete, and timber piles; perform tasks supporting construction rehabilitation and maintenance of mooring systems, jetties, breakwaters, and other structures; participate in tasks that support construction of piers, wharves, ramps and related structures required for cargo loading and off-loading; and assist in the preparation and construction of facilities for Roll On Roll Off (RORO). The ATC Type II system is considered a Critical Dual Use (CDU) system, enabling and supporting Defense Support to Civil Authorities (DSCA) operations (i.e. Disaster Relief). ATC Army Acquisition Objective (AAO) is 350 Systems (Type I: 182; Type II: 168 Systems)

Justification:
 FY14 Base procurement dollars in the amount of \$19.863 Million procures 19 Type II cranes.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Description:

The Asphalt Mixing Plant (AMP) is a commercial off the shelf (COTS) system capable of producing a minimum of 150 tons per hour of asphalt for use in the construction of roads, airfields, helicopter pads, parking lots and storage areas. The AMP is fielded to Asphalt Teams and the Army training base. The AMP is a portable drum-type, electric-motor-driven facility capable of self-erection (major components) and operation without permanent type footings. The AMP consists of major components and accessories required to assemble a complete plant. The AMP components consist of a plant control trailer, dedrummer, asphalt storage tank, 4-bin aggregate feeder, conveyor, surge bin feeder, mixing drum, power generators, and baghouse (filtration system). The Army Acquisition Objective (AAO) is 8.

Description:

The High Mobility Engineer Excavator Type I (HMEE-I) is a non-developmental item uniquely developed for the military. It is used to clear rubble and debris from routes, roads, airfields, and the construction of these elements to include providing survivability positions for the maneuver forces. It is all wheeled drive, diesel engine driven, highly mobile, equipped with a front bucket and a rear excavation bucket, and capable of using forklift, sweeper, and auger attachments. It is self-deployable and does not require a truck/trailer combination for transport and can reach speeds up to 55 MPH. It is transported on C-130 (w/ o armor), C-5, and C-17 aircraft. The HMEE-I also has the capability to accept a Crew Protection Kit in the form of an armor cab for contingency operations. The HMEE-I provides the capability of maintaining pace with the rapid movement of forces between engagements. The HMEE-I is fielded to Heavy, Light, and Stryker Brigade Combat Teams, Engineer Support Companies, Multi-Roll Bridge Companies, Route Clearance Companies, Petroleum Pipeline Companies and the Army training base.

The High Mobility Engineer Excavator (Airborne) is an armored, slightly modified HMEE I that is air-droppable in a C-17. The HMEE (A) provides the same excavation and high travel speed (55mph) capabilities as the HMEE I. The HMEE (A) will be fielded to Engineer Support Companies and Infantry Brigade Combat Teams (IBCTs) in Airborne units.

The High Mobility Engineer Excavator Type III is a Backhoe Loader (BHL) which is a commercial off-the-shelf backhoe loader with minor military modifications. The BHL provides the capability to execute general construction missions in the areas of road building, airfield construction, repair and improve road systems, trails and bridges. The BHL also has the capability to accept a Crew Protection Kit in the form of a replaceable armor cab for contingency operations. The BHL is capable of driving up to 25 MPH on improved roads and 7 MPH off-road. The BHL is transported via C-130/C-5, C- 17 aircraft, highway with M916/M870 and M915/M172 truck trailer combination organic to the unit. The BHL is fielded to Horizontal and Vertical Construction Companies, Army training base, and other Non Engineer Units.

The Army Acquisition Objective is: 1,508 (HMEE I: 805/HMEE III: 703).

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
FY 2014 Base procurement funds in the amount of \$23.465 million will procure 4 each HMEE Type I, 30 HMEE (A) and 25 attachments to be placed on systems going to Engineering Support Companies and Route Clearance Companies. The HMEE Type I, which replaces the Small Emplacement Excavator (SEE), supports Brigade Combat Teams (BCTs). The HMEE Type I is more mobile, has more digging capability, and is more reliable due to its age compared to the SEE. Additionally, technology improvements in ride quality, fuel consumption, on-board diagnostics, reliability/ maintainability, and environmental compliance for engines will make the HMEEs safer, more Manpower Personnel Integration (MANPRINT) friendly, and environmentally compliant. The HMEEs are used for performing all Army Engineering missions: Mobility, Counter-Mobility, Survivability and Sustainment and Route Clearance Missions; to include horizontal and vertical construction tasks, including rapid airfield construction and repair the mobility of an immature infrastructure. An increase to the Army Acquisition Objective (AAO) to 805 is due to force structure changes and addition of the HMEE to Airborne Brigade Combat Teams, and Petroleum Pipeline Companies. This program is considered a Critical Dual Use (CDU) system enabling and supporting Defense Support to Civil Authorities (DSCA) operations.

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

The Enhanced Rapid Airfield Construction Capabilities (ERACC) consists of four (4) independent products that enhance the joint commander's capability for Enable Theater Access (ETA) operations. ERACC provides the joint commander the capability enhancement to rapidly construct new airfields, runways and to upgrade existing facilities to meet joint task force needs. This expands operating capacities of Aerial ports Embarkation/Debarcation (APOE/APOD). ERACC provides the joint commander a capability enhancement to rapidly open new airfields and runways, and/or to upgrade existing facilities to meet joint task force needs.

ERACC Type I, Site Selection and Assessment. This capability package is a software centric capability used to rapidly assess potential sites for airfield operations. This capability provides geospatial information, site analysis, terrain visualization, airfield performance predictions, constructability estimations, on-site material characterization, and site design capabilities. The fielding of the ERACC Type I software will be to users of the ENFIRE engineer reconnaissance system as part of the ENFIRE 7.0 software baseline, and will be included in all subsequent baselines. The users include construction engineer platoon leaders, engineer liaison teams, facilities managers, and contracting personnel within Engineer organizations for construction project management, reconnaissance, facilities and inventory management, Tele-engineering, site layout, rudimentary surveying, mapping, and associated reporting. The ERACC Type I system is a software application on the ENFIRE system. The AAO for the Type I is 86 and will be procured by Product Director Combat Terrain Information Systems (PD CTIS).

ERACC Type II, Enhanced Earthmoving. This system is a global positioning system (GPS) and laser blade leveling kit that is installed on a dozer, grader, scraper and Deployable Universal Combat Earthmover (DEUCE). The blade leveling significantly increases operating productivity and training efficiencies by reducing construction times and fuel consumption. A project design can be loaded into the blade leveling display box allowing the operator to have 3-D view of where he is in relation to the project end state. This allows the operator to instantly know where to fill and cut and thus eliminates the requirement for the survey team to repetitively verify the project. The AAO for the Type II 252 and will be procured by PM Combat Engineer/Material Handling Equipment (CE/MHE).

The fielding of the Enhanced Earthmoving within Engineer organizations will be to Rapidly Deployable Earthmoving-Light (RDE-L) Platoons, an integral asset of the Engineer Support Companies.

ERACC Type III, is the Mobil Technical Engineer Lab (MTEL) and is an integration of commercially available non-developmental items. MTEL effort is a C130 airplane Low Velocity Air Droppable (LVAD)/CH-47 helicopter sling transportable package enhancing a modularly designed capability to rapidly open new airfields and runways, and/or upgrade existing facilities to meet joint task force needs. The MTEL provides

MDAP/MAIS Code(s):

a soil test and survey capability utilizing a utility vehicle. This allows the ERACC Team to quickly understand the composition of the soil to determine feasibility for construction of an airfield. The MTEL can also be used for recon and scouting once the lab package is removed. The fielding of the MTEL will be within Engineer Support Company and Engineer Support Teams. The ERACC Type III AAO is 81 and will be procured by PM CE/MHE.

ERACC Type IV, is the Soil Reclaimer Stabilizer. This system is essential to mix soil stabilization products with soil to produce desired stabilized base layers suitable for aircraft traffic operations. This system supports rapid construction and or expansion of airfield operation capacities. It will also be employed during the construction/upgrading of helipads as a means to prevent brownout conditions from occurring during helicopter landing and takeoff operations. The machine is equipped with an onboard automated liquid distribution system that matches the desired liquid polymer application rate to the machines ground speed. It has the capability to continuously operate for a period of 10 hours.

The ERACC will be fielded to the Rapidly Deployable Earthmoving-Light (RDE-L) Platoon within the Engineer Support Company (ESC), Engineer Survey and Design Sections, Engineer Geospatial Cells, Forward Engineer Support Teams, and Technical Engineer Sections. The long term objective is to field the ERACC as a stand alone module within the ESC. The ERACC Type IV AAO is 34 and will be procured by PM CE/MHE. Joint U.S. Forces will employ ERACC types (I-IV) individually or as a combined mission based on engineer requirements.

The ERACC program procures Type I, Type II, and Type IV packages for FY 2014. ERACC Type I, Type II and Type IV are commercial off the shelf (COTS) programs and operate independently of each other.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
FY 2014 Base funding in the amount of \$13.590 million procures 18 ERACC Type I, 81 ERACC Type II, and 10 ERACC Type IV for a total of 109 each ERACC packages. This will support rapid construction and/or expansion of airfield operating capacities in support of mission requirements. FY 2014 procurement supports a balanced investment strategy for the Army's approved force structure and Army Force Generation (ARFORGEN) requirements.

Description:

Description:

The Construction Equipment (CE) Service Life Extension Program (SLEP) supports the Engineer Strategy by extending current construction capability until new procurements can be executed. The SLEP includes the Deployable Universal Combat Earthmover (DEUCE), dual steel wheel roller (DSWR), high speed compactors (HSC), vibratory roller, and select components of the asphalt mixing plant (AMP), and crushing, screening, and washing plant (CSWP). The CE SLEP is a commercial off the shelf program (COTS).

The DEUCE is a rubber-tracked dozer used in clearing, leveling, and excavation operations. It is C-130 airplane transportable and can be dropped by parachute at low velocity. It can travel at speeds up to 30 miles per hour (MPH) eliminating the typical construction equipment requirement of trailers and additional haul assets. The DEUCE rubber tracks allow construction, loading, and off-loading on airfields and paved roads without damage. No replacement solution provides these capabilities at this time.

The Dual Steel Wheel Roller (DSWR) is a self-propelled vehicle consisting of two steel drums, a diesel engine, and a hydrostatic drive. It is a commercial system used to compact bituminous material in paving operations.

The High Speed Compactor (HSC) is equipped with articulated steering, a dozer blade, a diesel engine, and has segmented impact pads on each of the four drums. It is capable of compacting various soil types in forward or reverse at speeds up to 12 MPH.

The Vibratory Rollers are self-propelled single drum rollers equipped with vibratory action, and are used to level and compact all soil types.

The Asphalt Mixing Plant (AMP) is a commercial off the shelf (COTS) system capable of producing a minimum of 150 tons per hour (TPH) of asphalt for use in the construction of roads, airfields, helicopter pads, parking lots, and storage areas. The AMP is fielded to Asphalt Teams and the Army training bases.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
FY 2014 Base procurement dollars in the amount of \$16.088 million provides refurbishment of approximately 80 vehicles consisting of DEUCE and compaction equipment. The Construction Equipment (CE) Service Life Extension Program (SLEP) is the engineer's lifeline to sustain the current force. The SLEP is critical to maintaining engineer unit's operational readiness standards by extending the life of many different CE vehicles by 10-15 years. It returns vehicles to the field with zero hours and zero miles with a manufacturer new vehicle warranty of 18 months. This program lowers the Army's operation and support costs normally associated with aged equipment. The SLEP is conducted at contractor facilities worldwide to include Germany, Italy, Korea, Kuwait and the USA.

This program is considered a Critical Dual Use (CDU) system enabling and supporting Defense Support to Civil Authorities (DSCA) operations.

Description:

This program covers various types of Construction Equipment (CE) where the acquisition cost for each line item is below \$5.0 million. These programs provide the enhanced capabilities to the current force making them able to execute their expeditionary mission.

1. The Bituminous Material Paving Machine (BMPM) is a self-propelled, crawler-mounted, diesel-engine-driven machine with an 8-foot basic paving width. The paving machine is capable of laying, compacting, and finishing bituminous strips 6 to 20 feet wide. It consists of a receiving hopper, a spreader, a compaction unit, cut-off shoes, and a screed with the capability of being extended to 20 feet. The Paving machine is fielded to Asphalt Teams and the Army training base.

2. Tester, Construction Materials, Moisture & Density (TCMMD) measures density and moisture of construction materials using radioactive sources and internal electronics. The TCMMD is used to conduct soil, and asphalt density testing and soil moisture testing by brigade level technical engineering teams, engineer horizontal construction teams, and construction & geodetic survey design and material analysis teams. The TCMMD is used to rapidly and effectively conduct soil and asphalt density testing, and soil moisture testing to determine if road networks, Ports of Embarkation (POE), Ports of Debarkation (POD), airfields, and landing strips are suitable for military operations.

3. The Water Well Drilling Rig (WWDR) is a four piece system consisting of a self propelled drilling rig, support/tender truck, a mud trailer and an air compressor trailer. The system will be used to produce water where surface or commercial sources do not exist. The drilling rig is a hydraulic, top-head driven unit with a telescoping mast capable of employing a standard 20 foot 8 inch drill steel string to a depth of 2000 feet. The rig will carry the initial 500 feet of drill steel. The support/tender truck will have a 2500 gallon water tank, an auxiliary 500 gallon fuel tank, a crane, and the capacity to carry 1500 feet in additional drill steel. The mud trailer will contain a mixing/cleaning system. The air compressor trailer will be utilized in supporting role in drilling and retrieving drill steel based upon geographical situations.

4. Route Remediation is a system of systems that provide engineer units the capability to quickly repair damaged or improve worn routes throughout unit assigned areas of responsibility. This system consists of the Vegetation Removal Tool, Machine Powered Mowing System, Portable Concrete Mixer, Self Propelled Concrete Saw, Wide Area Mower, Portable Asphalt Patcher, and the Portable Dust Palliative Dispensing Capability.

Justification:
FY 2014 Base procurement dollars in the amount of \$6.850 million supports the procurement, fielding, and training of various construction equipment and accessories/attachments used to sustain operational support and readiness for the Army. This equipment will allow Engineer Construction units to meet Operational Tempo (OPTEMPO) and Stability Reconstruction Operation (S&RO) requirements. Funding supports a balanced investment strategy for the Army's approved force structure and Army Force Generation (ARFORGEN) requirements.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

The Army Watercraft Extended Service Program (ESP) budget line funds the Service Life Extension Program (SLEP) of the Landing Craft Utility 2000 (LCU-2000). LCU SLEP will be executed across the full Army LCU-2000 inventory, a globally disbursed fleet of 34 each vessels, and is for the purpose of adding 10 years to the current Economic Useful Life (EUL) of this platform. While no new capability is being added, some capabilities will be improved through new technology insertion.

The US Army Watercraft Service Life Extension Program (SLEP) in prior fiscal years has been funded by MA4500, Modification of In-Service Equipment. As of FY 2014 the SLEP requirement has been moved to M11101 Army Watercraft Extended Service Program.

Landing Craft Utility 2000 (LCU-2000) provides intra-theater movement of combat vehicles, equipment, and sustainment cargo, to include containerized, break-bulk, and roll-on roll-off (RO/RO) cargo, to improved and/or degraded ports, bare and austere beaches, and inland water terminals. The vessel is ideally suited for the discharge and back load of sea lift; the shallow draft, bow ramp, and associated systems providing for beaching and extraction. The vessel supports Joint Logistics Over the Shore (JLOTS), seaport opening, and can deliver combat-configured elements or sustainment cargo during all phases of the campaign.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
The FY14 Base procurement dollars in the amount of \$38.007 million supports a qty of 2 Service Life Extension Program (SLEP) modification packages designed to extend the Economic Useful Life (EUL) of the LCU-2000 by a total of 10 years, and represents minimal investment necessary to retain this vital capability within the Army inventory through 2025. The LCU-2000 was fielded from 1990-1993 and was designed and built specifically to the objective of a 25 year EUL, currently expiring by 2015. The SLEP modification package will make improvements through technology insertion, and will specifically target to incorporate improvements in energy efficiency. Major focus areas of LCU SLEP are the main propulsion system, shipboard electrical generation and distribution system, bow thruster system, auxiliary machinery systems, and force protection.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Remarks:
 The initial Landing Craft Utility (LCU-2000) Service Life Extension Program (SLEP) will complete the first two vessels. These vessels will be the Low Rate Initial Production (LRIP) articles that will be used during FY 2015 for Test, Evaluation, Technical Manual (TM) validation, and TM verification. Full Rate Production (FRP) of LCU-2000 vessels will occur in FY 2016-2021. The SLEP activities will update Main Propulsion, Bow Thruster, Ships Service Generator diesel engines, modernize communication and navigation systems (install SIPRNET, Common Operating Picture), upgrade Force Protection Equipment (new gun mounts and ballistic protection), and upgrade engineering systems (e.g. Air Conditioning System). Preparation for a full and open competitive contract is currently in process. Lead times are based on previous SLEP contracts.
 The US Army Watercraft Service Life Extension Program (SLEP) in prior fiscal years has been funded by MA4500, Modification of In-Service Equipment. As of FY 2014 the SLEP requirement has been moved to M11101 Army Watercraft Extended Service Program (ESP).

2	TBD 2 - TBD	1.00	1.00	1.00	-	6	9	15	-	6	9	15

Remarks:
 Service Life Extension Program (SLEP) modifications are completed at commercial shipyards. The SLEP efforts for each vessel average nine months for completion. There is no Production Rate.
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

[#] FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

The principle capabilities of Army Watercraft Systems are 1) movement/maneuver and distribution of combat equipment and sustainment material; 2) access to degraded and/or austere ports; 3) seaport operations, to include docking/undocking, firefighting, towing and rescue; 4) ship to shore access to "no port" areas such as austere and remote, bare beaches; and 5) heavy lift in support of damaged seaport and/or vessel repair and salvage.

Small Tug 900 (ST 900) provides movement of cargo barges and lighterage of various types within a harbor, port, or LOTS/Joint Logistics over the Shore (JLOTS) anchorage. It also assists larger tugs with utility work such as docking/undocking of ships of all sizes, movement of floating cranes, and line-handling duties.

Large Tug 800 (LT 800) performs transoceanic and coastal towing operations, docking and undocking of large ships, salvage and recovery operations for disabled or damaged watercraft at sea and along the coastal main supply routes, clearance of degraded, damaged, and denied access waterways and port facilities, and provides both ship to ship and ship to shore firefighting capability to include in support of ammunition upload/download operations.

Logistics Support Vessel (LSV) is globally self deployable, and provides worldwide and intra-theater movement and line haul of large quantities of combat vehicles, equipment, and sustainment cargo, to include containerized, break-bulk, and roll-on roll-off (RO/RO) cargo, to improved and/or degraded ports, bare and austere beaches, and inland water terminals. With 10,000 square feet of cargo space and a payload capacity of 2,000 tons, the LSV can carry 24 combat loaded M1A1 Main Battle Tanks or the equivalent. The vessel supports Joint Logistics Over the Shore (JLOTS), seaport opening and coastal/inland waterway distribution, anti-access theater opening, and can deliver combat-configured elements or sustainment cargo during all phases of the campaign.

The Modular Causeway System (MCS) provides floating platforms for the loading, discharge, and transport of combat vehicles, equipment, and sustainment cargo to and from improved or austere ports, inland water terminals, and during bare beach operations. A modular and highly transportable system, the MCS consists of both powered and non-powered systems to include the Roll On Roll Off Discharge Facility (RRDF), Causeway Ferry (CF), Floating Causeway (FC), and Warping Tug (WT), and serves as a key enabler for both Logistics Over the Shore (LOTS) and Joint Logistics Over the Shore (JLOTS) operations.

MDAP/MAIS Code(s):

Landing Craft, Utility (LCU 2000) provides intra-theater movement of combat vehicles, equipment, and sustainment cargo, to include containerized, break-bulk, and roll-on roll-off (RO/RO) cargo to improved and/or degraded ports, bare and austere beaches, and inland water terminals. The vessel is ideally suited for the discharge and back load of sea lift, the shallow draft, bow ramp, and associated systems providing capability for beaching and beach extraction. The vessel supports Joint Logistics Over the Shore (JLOTS), seaport opening and coastal/inland waterway distribution, anti-access theater opening, and can deliver combat-configured elements or sustainment during all phases of the campaign.

Landing Craft Mechanized (LCM-8) transports combat equipped personnel and equipment, and sustainment cargo, from ship to shore and/or within coastal areas including inland waterways. The vessel is also capable of providing medical evacuations, command and control (C2) afloat, and light harbor salvage support. The size of the vessel facilitates operation within restricted areas, access to shallow areas to include bare beaches, and extensively throughout inland waterways.

Barge Derrick, 115 ton (BD-115) provides heavy lift to load and discharge cargo that exceeds the lift capacity of ship's gear in theater-wide missions/operations. The BD-115 is capable of lifting the M1A1 main battle tank from the centerline of a non-self sustaining ship, and is world-wide deployable via the LT-800. The BD-115 also provides heavy clearance and salvage capabilities within degraded, damaged, and denied access waterways and port facilities.

Railroad equipment consists of locomotives, rolling stock, railway passenger cars, track maintenance equipment, etc., used to support Army ammunition plants, Army Materiel Command (AMC) depots, Installation Management Command (IMCOM), Forces Command (FORSCOM) and Training and Doctrine Command (TRADOC) installations in peacetime, training and mobilization missions.

Justification:
FY 2014 Base procurement dollars in the amount of \$10.6 million provide support for Army Watercraft operations as well as for the Army's Rail Program which consist of locomotives, railway freight and passenger cars, and support equipment. These funds provide for the replacement of logistically unsupportable assets where current items are in some cases already unserviceable and in other cases, either unsafe or not cleared for use under Federal Railroad Administration (FRA).

Remarks:
 Production rates shown are monthly.
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

[#] FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

DOD has over 18,000 generators that no longer meet user requirements and have an average age of over 32 years. The Tactical Electric Power Program (TEP) program replaces and modernizes the DOD generator inventory to meet the Army's requirements. The TEP program is structured around Small (2-3kW), Medium (5-60kW), Large (>100kW) stand-alone generators, multiple configurations of Power Units/ Power Plants (PU/PP) and associated distribution equipment (Power Distribution Illumination System Electrical (PDISE). These programs collectively provide a new, modern family of generators and distribution systems satisfying critical user requirements and will:

1. Reduce Acquisition Costs and Operating and Sustainment (O&S) costs by 15-20%.
2. Reduce weight by 25% across generator population, thereby reducing the Logistics footprint and improving deployability.
3. Significantly improve Reliability, Availability and Maintainability, to include Mean Time Between Failure improvements of 100-300%.
4. Eliminate gasoline from the generator inventory, thus complying with DOD guidance regarding single fuel on the battlefield (diesel/JP8).
5. Reduce battlefield detectability by lowering noise levels by 50-75% across generator population.
6. Improve battlefield survivability by providing mission critical electric power to the digitized warfighting forces.

MDAP/MAIS Code(s):		
Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.		

Justification:
 FY14 Base procurement dollars in the amount of \$129.437 million supports small, medium, and large generator sets, assembly of power units and power plants, and PDISE (Power Distribution Illumination System Electrical). The program provides for the partial replacement of the current inventory of over aged, gasoline-fueled generators with modernized single fuel (diesel/JP8) assets that will enhance the user's safety, survivability, reduce the logistics footprint and enhance reliability and maintainability. These mobile generators provide electric power to virtually every weapon, communication, medical and combat support system in the inventory including Missile/Air Defense Systems; Tactical Operations Centers; Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance systems; and Brigade Combat Teams (BCTs). Funding supports a balanced investment strategy for the Army's approved force structure and Army Force Generation (ARFORGEN) requirements.

There are no FY14 OCO dollars.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Remarks:

All production rates shown on a yearly basis

"A" in the Delivery Schedule indicated the Contract Award Date.

Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

2	DRS - Bridgeport,CT	1,080.00	1,440.00	4,800.00	6	3	12	15	6	3	12	15

Remarks:
 All production rates shown on a yearly basis
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Remarks:

All production rates shown on a yearly basis. Manufacturer has multiple products that contribute to the minimum production rate.
 ‡ Delivery rows marked with the † symbol indicate that they are funded through a separate Line Item. See the respective components' exhibits for details, including the full delivery schedule.
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Service/Agency Suffixes:

Remarks:
 This is an integration of components delivered to the contractor which makes up the power unit/power plant. The manufacturing lead time includes the time to order and receive the generator sets, trailers, and switchboxes. All production rates are shown on a yearly basis. Manufacturer has multiple products that contribute to the minimum production rate.
 ‡ Delivery rows marked with the ♦ symbol indicate that they are funded through a separate Line Item. See the respective components' exhibits for details, including the full delivery schedule.
 "A" in the Delivery Schedule indicated the Contract Award Date.

UNCLASSIFIED

Exhibit P-21, Budget Production Schedule: PB 2014 Army		Date: April 2013
Appropriation / Budget Activity / Budget Sub Activity: 2035A: Other Procurement, Army / BA 03: Other Support Equipment / BSA 60: Generators	P-1 Line Item Nomenclature: MA9800 - Generators And Associated Equip	Item Nomenclature: R62700 - POWER UNITS/POWER PLANTS

Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Description:

The RT-240, Rough Terrain Container Handler (RTCH) moves, lifts, and stacks International Standard Organization (ISO) containers. The RT-240 operates worldwide on multiple terrains, including sand, to lift and transfer ISO containers weighing up to 53,000 pounds. The RT-240 has 4-wheel drive and is capable of fording 5 feet of salt water. The RTCH is C-5 or C-17 air transportable and can be configured in minutes from loading mode to transportation mode. Currently, the U.S. Army has over one million ISO containers in the Southwest Asia (SWA) Theater. The RTCH is the critical element in handling all of these containers. The RT-240 is equipped with an expandable 20 to 40 foot top handler capable of handling the new ISO family of 8X20 and 8X40 containers. It is capable of stacking containers three high and can reach a container in a second row. The RT-240 serves a vital need since it is necessary to stack containers in temporary storage areas, sort them by ultimate destination, and transfer the containers to appropriate modes of transport for onward movement. A single trained RTCH operator can quickly and efficiently load or unload a convoy in minutes instead of hours. This is important considering the RT-240 handles a large number of containers flowing through overseas ports, theater distribution centers, and forward support areas. The RTCH is a Joint US Army, Navy, and Marine Corps acquisition program. Foreign Military Sales (FMS) of the RTCH have included sales to the United Kingdom and Australia. The RTCH system is a Critical Dual Use (CDU) system enabling and supporting Defense Support to Civil Authorities (DSCA) operations (i.e. Disaster Relief). RTCH Army Acquisition Objective (AAO) is 873 systems.

MDAP/MAIS Code(s): FY 2014 Base procurement funding in the amount of \$1.250 million supports updating of maintenance manuals as the AAO has significantly increased from 200 to 873 systems. The manuals need to include significantly more maintenance and repair procedures due to configuration changes made throughout the 10 year production period.

Description:

The Family of Forklifts supports various combat, combat support, and combat service support units in the loading and unloading of palletized supplies. Currently, the forklift family consists of the Light Capability Rough Terrain Forklift (LCRTF) and the All-Terrain Lifter, Army System (ATLAS).

The Light Capability Rough Terrain Forklift (LCRTF) is used to load and unload palletized supplies including ammunition from International Standard Organization (ISO) containers and tactical vehicles. The LCRTF will move supplies across the beach and rough terrain to transfer loads from aircraft landing zones and tactical vehicles. The LCRTF mission profile is 20 hours of operations in all types of environmental conditions. The LCRTF will be employed by cargo battalions, artillery units, transportation support battalions, combat service support units and various aviation units. It will be routinely in forward deployed areas with operating forces in support of combat operations other than war. The LCRTF system is a Critical Dual Use (CDU) system enabling and supporting Defense Support to Civil Authorities (DSCA) operations (i.e. Disaster Relief). It can be transported by C-130 aircraft and external sling load via CH47D helicopter. LCRT Forklift Army Acquisition Objective (AAO): 2,301 Systems

The All-Terrain Lifter, Army System (ATLAS) is a family of, C-130 airplane, transportable 10,000 Pound (LB) capacity variable reach rough terrain forklifts. The ATLAS primary missions include handling all classes of supply, stuffing and un-stuffing standard Army pallets in 20 foot International Standard Organization (ISO) containers, handling break-bulk cargo and loads weighing up to 10,000 LBS on Air Force 463L pallets. It is a key component to the Army's Container Oriented Distribution System which is essential to the deployment of an Expeditionary Army and sustainment of a deployed force. The ATLAS forklift mobility capabilities support all the Army's Brigade Combat Teams and units from seven branches (Transportation, Quartermaster, Ordnance, Missile & Munitions, Engineer, Aviation and Medical). Crew survivability is being addressed in accordance with the Army's Long Term Armor Strategy (LTAS). The ATLAS is a military unique vehicle. It operates in all terrains, has cross country mobility and road speed of 23 Miles per Hour (MPH). Commercial forklifts cannot meet the military requirements nor the Key Performance Parameters (KPP) identified in the ATLAS requirements document. The ATLAS is capable of performing all mission requirements and meets EPA Tier III emissions requirements, with increased reliability and survivability. The ATLAS system is a Critical Dual Use (CDU) system enabling and supporting Defense Support to Civil Authorities (DSCA) operations (i.e. Disaster Relief). The ATLAS Army Acquisition Objective (AAO) is: 4,645. The Army has procured 4,399 Systems.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:

FY 2014 Base procurement dollars in the amount of \$8.260 Million procures 60 LCRTF and supports maintenance manual updates for the ATLAS.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

1	Kalmar RT Center - San Antonio	15.00	35.00	100.00	-	3	25	28	-	3	13	16

Remarks:
 Production to begin after completion of Interactive Electronic Technical Manual (IETM) Development and Testing, prior to Full Material Release. Production rates shown are monthly.
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Remarks:
 Production rates shown are monthly.
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

[#] FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

The Combat Training Centers (CTCs) are the Army's premiere collective training centers. The CTCs provide high-fidelity Live, Virtual and Constructive (LVC) Brigade training rotations which prepare Brigade Combat Teams, Joint partners, and supporting units to deploy in support of Army Force Generation (ARFORGEN). The CTC program supports the National Training Center (NTC), the Joint Readiness Training Center (JRTC), and the Joint Multinational Readiness Center (JMRC).

The Instrumentation System (IS) is an information technology based communications, analysis and feedback system that provides a realistic operational environment for training the brigade combat team and below in preparation for deployment to conduct Unified Land Operations (ULO). It is comprised of voice, video, and data instrumentation subsystem networks that include software, hardware, work stations, base-station equipment, communications infrastructure, voice radios, data devices, and interfaces. The Instrumentation System provides the Combat Trainer (CT) critical situational awareness for training safety, analysis, and feedback capabilities to conduct After Action Reviews (AARs). The IS program also provides the National Training Center (NTC) and the Joint Readiness Training Center (JRTC) an exportable Instrumentation System capability that provides a mobile training capability to support ARFORGEN and Unified Land Operations.

The Combat Training Center Military Operations on Urban Terrain Instrumentation System (CTC MOUT IS) consists of a video based instrumentation system, including Exercise Control and After Action Review (EXCON/AAR), collection, editing and presentation capability, along with fog-of-war devices fielded at the three CTCs [National Training Center (NTC), Joint Readiness Training Center (JRTC), and the Joint Multinational Readiness Training Center (JMRC)]. NTC's MOUT IS capability has been fielded and is scheduled for refresh in FY16. JRTC's MOUT IS capability is in mid-refresh after being originally fielded in 1995. JMRC's MOUT IS capability is scheduled to receive a refresh beginning in FY14.

The Combat Training Center LIVE FIRE Modernization (CTC LIVE FIRE MOD) procures and installs capabilities for the CTCs to support the transition from Mission Rehearsal Exercise/Situational Training Exercise (MRE/ST) rotations to Unified Land Operations (ULO) against a hybrid threat.

The CTC Aviation program procures and installs capabilities for the Instrumentation System (IS) to track newly fielded Light Utility Helicopters (LUH) performing Observer/Controller and Opposing Forces (OPFOR) roles at the three CTCs. The CTC Aviation program provides the capabilities to communicate with LUH organic onboard radios via the CTC ground-based Observer Controller Communications Systems (OCCS).

Justification:
 FY 2014 Base procurement dollars procure training devices and systems to support a balanced investment strategy for the Army's approved force structure and Army Force Generation (ARFORGEN) requirements.

FY 2014 Base procurement dollars in the amount of \$109.861 million procures a replacement Range Communications System for the National Training Center (NTC) and essential lifecycle activities at the Combat Training Centers (CTCs). The current Range Communications System at NTC has reached end of life and can no longer be sustained beyond FY16, thus potentially causing a catastrophic failure in mission at NTC. Funds are required to procure a voice and data communications infrastructure, software support engineering environment, range monitoring and control system, combat trainer voice communications system, and combat trainer vehicle communication system. Funding will also be used to perform essential lifecycle activities on the existing subsystems of the fielded Instrumentation Systems located at the National Training Center (NTC), Joint Readiness Training Center (JRTC), and the Joint Multinational Readiness Training Center (JMRC). These essential lifecycle activities consist of Information Technology (IT) Hardware Replacement, Continuous Technology Refresh, and Post Deployment Software Support (PDSS) to ensure that the Instrumentation System subsystems do not become obsolete and that there is a continuing evolution of system capability over the lifecycle of the Instrumentation Systems at the three Combat Training Centers (CTCs).

FY 2014 Base procurement dollars in the amount of \$8.948 million procures CTC Military Operations on Urban Terrain (MOUT) Instrumentation System refresh at the Joint Multinational Readiness Center (JMRC) at Hohenfels, Germany. Specifically, these funds will replace the Exercise Control (EXCON) Center (equipment and software) and the After Action Review (AAR) theater (equipment and software)

MDAP/MAIS Code(s):		
<p>allowing the site to be converted from an analog video to digital video solution which will require less equipment to operate and maintain thus lowering the life cycle cost of the facility. Also, this refresh will add the capability to input AAR footage from the MOUT site (Shughart Gordon) at JRTC directly to the brigade AAR and in the Rotational Unit take home package. Lastly, this refresh will replace the Uninterrupted Power Supply (UPS) unit that maintains power for the entire Range Operations Center (includes both the EXCON and AAR theater).</p> <p>FY 2014 Base procurement dollars in the amount of \$1.124 million procures CTC LIVE FIRE MOD kits to replace obsolete/unsafe Hoffman Devices and refreshes/replaces obsolete target lifters and thermal signature devices at the CTCs. The CTC LIVE FIRE MOD kits consist of Range Devices (BES and Handheld Controllers) and Targetry (Stationary Infantry Targets and Stationary Armor Targets). This funding will support the CTC's transition from Mission Rehearsal Exercise/Situational Training Exercise (MRE/STX) rotations to Full Spectrum Operations (FSO) against a hybrid threat.</p> <p>FY 2014 Base procurement dollars in the amount of \$1.777 million procures the CTC Aviation team support needed to complete the LUH shootback fielding and integration of TESS instrumentation into the NTC Instrumentation System, integration of OCCS capability on aircraft at NTC, and TESS instrumentation training for the NTC pilots and maintainers. The tracking and communications capability provided by this effort are critical to the safety of aircraft and crews flying in a demanding, crowded training environment. The shootback capability provides the OPFOR crews with an enduring synthetic weapons capability, essential for effective training of the Blue Forces (BLUFOR).</p> <p>All quantities support the Active Army.</p>

"A" in the Delivery Schedule indicated the Contract Award Date.

Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Description:

The Army continues to build on a major initiative with the Non-System Training Device (NSTD) program to introduce realistic and effective training devices into the individual and unit training setting. These devices bring into play many aspects of the combat environment (smoke, noise, confusion, stress, etc.), which provide our Soldiers with a valuable experience of battlefield conditions in a training environment. This effort includes the acquisition of training capabilities that support force-on-force training, force-on-target training, engagement simulation, and classroom instruction. Devices and simulations are being fielded to minimize resource consumption which will affect a direct cost reduction through conservation of energy and ammunition. These devices provide capabilities that allow Soldiers, leaders, and units to train tasks and missions that would be unsafe or too resource intensive to conduct with actual weapons, weapons systems, and ammunitions or if done in the actual environment. This budget line supports all Other Procurement, Army (OPA) funding for Non-System Training Devices (NSTD). It procures a variety of NSTD items such as the Instrumentable Multiple Integrated Laser Engagement System (I-MILES), Basic Electronics Maintenance Trainer (BEMT), Army Targetry System (ATS), Digital Range Training System (DRTS), Targetry Modernization, Integrated Military Operations in Urbanized Terrain (MOUT) Training System (IMTS), Live, Virtual, Constructive Integrating Architecture (LVC-IA), and Homestation Instrumentation Training System (HITS).

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
FY 2014 Base procurement dollars in the amount of \$8.340 million will provide a technical refresh for 463 EST instructor/operator systems (IOS).

FY 2014 Base procurement dollars in the amount of \$9.998 million will provide a Basic Electronics Maintenance Trainer (BEMT) technology refresh half of the trainers (136) at Fort Gordon.

<p>FY 2014 Base procurement dollars in the amount of \$2.623 million will procure one Close Air Support Module for the Immersive CFFT system, fund the upgrade of the capabilities of the system to meet concurrency requirements and tech refresh six CFFT II systems.</p> <p>FY 2014 Base procurement dollars in the amount of \$29.413 million procures 3 Homestation Instrumentation Training Systems (HITS) for fielding to Homestations in accordance with HQDA fielding priorities.</p> <p>FY 2014 Base procurement dollars in the amount of \$3.285 million will procure and field three Virtual Patient Simulators and the upgrade of one Training Support System in direct support of the Medical Simulation Training Center program.</p> <p>FY 2014 Base procurement dollars in the amount of \$1.710 million procures network infrastructure for the Training Support Centers after the MILCON project is completed. This includes routers, servers, site licenses, and other building infrastructure to make the buildings network ready.</p> <p>FY 2014 Base procurement dollars in the amount of \$2.240 million procures racks and shelving infrastructure MILCON tails. Funds are executed by the Army Corp of Engineers to complete construction buildouts.</p> <p>FY 2014 Base procurement dollars in the amount of \$27.102 million procures COTS hardware, software, Training and PDSS to support JLCCTC. This will enable continued efficient training support from the current systems and facilities, then transition these facilities to the objective simulation systems.</p> <p>FY 2014 Base procurement dollars in the amount of \$17.028 million procures for the Army Targetry Systems (ATS) program computerized live fire Armor and Infantry training ranges to the Army, USAR, and ARNG installations to ensure soldier readiness. These ranges will replace existing ranges with new technology and increase throughput capability by providing additional ranges. Readiness of soldiers is critical to saving lives in wartime situations. Training ranges being provided will enhance the quality of training at installations. Accurate feedback to soldiers on training with battlefield conditions helps them learn procedures and techniques that will save lives and achieve success on the battlefield.</p> <p>FY 2014 Base procurement dollars in the amount of \$.262 million support the Aerial Weapons Scoring System (AWSS) program in-house government and contractor support for integration and upgrades to the scoring subassemblies. This includes information assurance recertification.</p> <p>FY 2014 Base procurement dollars in the amount of \$32.934 million procures for the DRTS program, Ft Bragg Aerial Gunnery Range (AGR) Phase II, Ft Carson Digital Multi-Purpose Training Range (DMPTR), Camp Ripley DMPTR/Scout Reconnaissance Range (National Guard), and in-house government and contractor support.</p> <p>FY 2014 Base procurement dollars in the amount of \$11.489 million procures for the Integrated Military Operations in Urban Terrain (MOUT) Training System (IMTS) program a Collective Training Facility (CTF) at Camp Blanding, Camp Gruber and Ft. Pickett, an Urban Assault Course (UAC) at Camp Dodge, in-house government support, and Continuous Technology Refreshment.</p> <p>FY 2014 Base procurement dollars in the amount of \$1.768 million procures Target Modernization which provides a single Government owned common target control system for all Army targets and small arms ranges, Post Deployment Software Support, a set of common specifications and interfaces, and in-house government and contract support. The Target Modernization program provides solutions to upgrade existing ranges to common standards.</p> <p>FY 2014 Base procurement dollars in the amount of \$23.168 million procures commercial-off-the-shelf (COTS) training enablers for the Mission Command Training Centers which include the network infrastructure upgrade, DoD Information Assurance Certification and Accreditation Process (DIACAP) and Electronic Security System (ESS).</p> <p>FY 2014 Base procurement dollars in the amount of \$52.695 million procures Instrumentable Multiple Integrated Laser Engagement System (I-MILES) and replaces the obsolete Basic MILES at various installations Army wide. Basic MILES was fielded in the 1970's and 1980's and is not economical to repair and sustain. Devices are to be fielded as either Brigade Combat Team (BCT) or battalion sets.</p>

"A" in the Delivery Schedule indicated the Contract Award Date.

Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

"A" in the Delivery Schedule indicated the Contract Award Date.

Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Description:

The Close Combat Tactical Trainer (CCTT) program is composed of three systems; the CCTT, the Reconfigurable Vehicle Tactical Trainer (RVTT) and the Dismounted Soldier Training System (DSTS). These three systems support the training of Infantry, Armor, Mechanized Infantry, Cavalry and Armored Reconnaissance units from squad through Battalion/Squadron level, to include their staffs. The primary training audience operates from full-crew simulators, reconfigurable command post, and live battalion command posts to accomplish their combined arms training tasks. The CCTT is comprised of full fidelity, manned simulators for the M1 Abrams main battle tank, M2 Bradley infantry fighting vehicle, Fire Support Vehicle, High Mobility, Multipurpose Wheeled Vehicle (HMMWV), and Heavy Expanded Mobility Tactical Truck (HEMTT). The RVTT, using the Reconfigurable Vehicle Simulator (RVS), can replicate multiple variants of the HMMWV and other wheeled tactical vehicles in a fully immersive, virtual environment. The CCTT and RVTT are networked systems and are supported by emulators and semi-automated forces that provide a close combat environment, complete with both friendly and opposing forces. CCTT and RVTT simulate elements on the combined arms battlefield to provide a realistic training environment by leveraging Synthetic Environment Core (SE Core) capabilities. The CCTT and RVTT train Active Component (AC), Army Reserve (AR) and Army National Guard (ARNG) units, from crew through Battalion level, on tactics, techniques, and procedures in direct support of their collective training tasks. The Army fielded CCTT modules to populate nine company level fixed sites, four platoon level mobile sets for USAREUR, and 14 ARNG mobile platoon level sets. Size is based on the locations of AC divisions and regiments, and services both AC and Reserve Component (RC) units. The CCTT fixed site facility contains a simulation bay sized to accommodate a maximum of a 40 manned modules; a reconfigurable command post; five After Action Review (AAR) rooms; two Semi-Automated Forces (SAF) rooms (Blue and Red Force), each containing five SAF workstations; a Maintenance Control Console (MCC) room; and a Master Console (MC). The mobile platoon sets contain four simulator modules in the tank platoon version and mechanized infantry platoon sets. The 14 ARNG mobile sets are dedicated to the ARNG and AR. The RVTT sets contain four RVS modules for combat convoy training at Infantry Brigade Combat Team (IBCT) and Stryker Brigade Combat Team (SBCT) locations. The RVTT system will have 24 sites for the AC and AR. The AC and AR sites will support IBCTs, Airborne, Ranger and Special Forces Units. A DSTS suite is a network of nine, immersive Soldier components, After Action Review, SAF and five desktop workstations for adjacent units. The Army will field DSTS suites at AC, AR and ARNG sites. The CCTT program is constantly updated to stay current with fielded tactical equipment, to include interoperability with Force XXI Battle Command Brigade and Below (FBCB2), Army Battle Command System (ABCS), the Aviation Combined Arms Tactical Trainer (AVCATT), Live, Virtual and Constructive-Integrating Architecture (LVC-IA) and associated weapon system simulators. CCTT supports ARFORGEN, Unified Land Operations and the training of units deploying in support of Overseas Contingency Operations (OCO).

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
FY 2014 Base procurement dollars in the amount of \$30.063 million procure fifteen Dismounted Soldier Training System (DSTS) suites. These suites will support home station training and pre-deployment training to support on-going combat operations. Fieldings are scheduled to support the Active and National Guard components in training the total Combined Arms Force on a simulated, fully interactive, virtual battlefield. The need exists to train and sustain collective (crew through Battalion tasks and skills) and Brigade exercise with leaders in combat leadership, mission command, command and control, communications and maneuver, and to integrate the functions of logistics units to meet Army readiness and mission objectives. CCTT training augments live training by providing the Army the flexibility to train tasks that cannot be performed in a live training environment due to safety, cost and environmental constraints. These production systems specifically support home station, regional, and urgent training requirements for dismounted infantry squads preparing for OCO.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Description:

The Aviation Combined Arms Tactical Trainer (AVCATT) is an Army aviation training system for Active, Reserve and Army National Guard Components. A single suite of equipment consists of two mobile trailers housing six reconfigurable networked simulators that support the AH-64D/E, UH-60A/L/M, CH-47D/F, and OH-58D/F aircraft. The AVCATT system permits aviation units to conduct collective task training on a real-time, virtual battlefield in a combined arms scenario by leveraging Synthetic Environment Core (SE Core) capabilities. The AVCATT is designed to provide realistic, high intensity, collective and combined arms training for aviation units. AVCATT supports the Aviation Combined Arms Training Strategy, Army Forces Generation (ARFORGEN), Overseas Contingency Operations (OCO), and Unified Land Operations. Other AVCATT modules, such as the Non-Rated Crewmember Manned Module (NCM3, a sub-system of AVCATT), can be linked to this basic configuration, when and where needed, to support specific unit training requirements. Roleplayer, Semi-Automated Forces (SAF), and After Action Review (AAR) workstations are also provided as part of each suite. AVCATT is a fully mobile system, capable of using shore and generator power and is transportable worldwide.

Justification:
FY 2014 Base procurement dollars in the amount of \$34.913 million supports Post Deployment Software Support (PDSS), procurement of two NCM3 Suites, and Visual System Upgrades to the AVCATT.

The AVCATT supports the Aviation Combined Arms Training Strategy and prepares aviation units to operate effectively on the Joint/combined arms battlefield. Existing aviation individual and crew simulators were not designed for interoperable, combined arms exercises. Field training exercises are increasingly constrained by high cost, environmental and safety restrictions, limited maneuver areas and ranges, and inadequate threat/target representations. Neither previous aviation simulation training capabilities, nor live field training exercises, were capable of realistically simulating the Joint/combined arms battlefield, providing effective Joint task force/combined arms training, nor supporting mission rehearsal in a Joint/combined arms environment. Due to the increasing constraints on live gunnery training, the AVCATT simulation must be used to address primary and secondary weapon systems training deficiencies for utility and attack rotary wing aircraft.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the Active and Reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

"A" in the Delivery Schedule indicated the Contract Award Date.

Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Description:

The Games for Training Program (GFT) enables Soldiers from individual to Company level to train in a semi-immersive environment on battle drills, operational procedures, mission rehearsal and other tactical tasks and missions. The GFT training enablers include commercial-off-the-shelf (COTS) product line of personal, computer-based gaming applications to train Active, Reserve and Army National Guard Components on decision-making and team and individual tasks at multiple skill levels, using various mission scenarios. The program leverages the commercial game industry to provide state of the art training solutions. A Gaming Toolkit describes the hardware for a gaming system. It trains up to 48 Soldiers and includes all the peripherals (steering wheels, headsets, mice, Opposing Forces (OPFOR) computers, admin computers, switches, cabling, controllers, and joysticks) required to run multiple training scenarios. In addition, the program provides Army-wide licenses from the commercial market or from government research and development agencies. Gaming technology provides the capability to rapidly introduce lessons learned from combat operations in Afghanistan into a realistic, semi-immersive environment to develop and train tactics, techniques, and procedures within the Live, Virtual and Constructive Integrating Architecture(LVC-IA) in support of Unified Land Operations, Contemporary Operating Environment and Decisive Action.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
 FY 2014 Base procurement dollars in the amount of \$9.955 million keeps units and Soldiers training on key tactical tasks and missions. The funding enables continuation of the GFT training system, a commercial, off-the-shelf game software application used to train Active, Reserve and Army National Guard Soldiers in a PC-based, shared environment. Soldiers use the GFT system to practice technical skills necessary to perform multiple mission types in accordance with current tactics, techniques and procedures in preparation for Unified Land Operations. GFT provides a low-overhead, ubiquitously available training capability that levels the small unit training capability across all three components (Active, Guard, and Reserve). GFT is a critical program enabling other virtual and constructive training capabilities and the Integrated Training Environment.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the Active and Reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Description:

Calibration Sets Equipment (CALSETS) consists of calibration instrumentation housed in fixed facilities or contained within tactical shelters with accompanying power generation equipment. The CALSETS instrumentation provides support to maintenance units and area support organizations from brigade to multi-theater sustainment operations and ensures a cascading transfer of precision accuracy originating from the US National Institute of Standards and Technology (NIST). The calibration sets are designed to support 90 percent of the Army test, measurement, and diagnostic equipment (TMDE) workload with an objective of 98 percent. The instruments and equipment procured through this program are assembled into several set configurations (AN/GSM-286, AN/GSM-287, AN/GSM-421 and AN/GSM-705). These calibration standards sets are integral to verifying the accuracy of TMDE with mandated traceability to accuracy standards. State-of-the-art calibration equipment is required to ensure that advanced technology weapons and systems are maintained at the required state of operational readiness. Systems supported by the Calibration Sets include unmanned aerial vehicles supporting military signal and electronic intelligence operations; tactical and strategic communications; and ground and aviation platforms such as the Army family of tactical tracked and wheeled vehicles and the Apache, Blackhawk, and Chinook helicopters.

Approved Acquisition Objective (AAO): AN/GSM-286 - 50; AN/GSM-287 - 85; AN/GSM-421 - 40; AN/GSM-705 - 33; Secondary Reference Standards Set - 12

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:

FY 2014 Base procurement dollars in the amount of \$8.241 million support acquisition of precision calibration instruments, modernization of the CALSETS and up-armor capable AN/GSM-421A(V)2 Tactical Calibration Systems. These items are required to provide automated calibration support for multiple Army systems to include communications, aviation, missiles, automotive and other platforms. Instruments are contained within the various calibration set configurations.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Remarks:
 Numerous items are procured through the Calibration Sets Equipment program. For FY12 and FY13, only those acquisition programs totaling \$500,000 or more are being identified individually. Sole source acquisition of several items was necessary to maintain compatibility with the existing instruments in the calibration sets.
 All equipment except the AN/GSM-421A(V)2 Calibration Set is Commercial Off The Shelf (COTS).

Remarks:
 Production rates are annual rates.
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Description:

The Integrated Family of Test Equipment(IFTE)family consists of the Maintenance Support Device (MSD) for field-level support and the Next Generation Automatic Test System (NGATS) for consolidation of off-system automatic test equipment requirements. The systems provide automatic test equipment capable of supporting multiple weapon systems, electronic fault isolation, test and repair capabilities at all levels of maintenance and it is done more cost effectively than system-specific testers. The MSD is a lightweight, rugged tester used at all levels of maintenance to automatically diagnose electronic and automotive subsystems of the Army's ground and aviation weapon systems. It provides test and diagnostic support and maintenance automation capabilities that are critical to the readiness of Army units and their equipment. The MSD hosts interactive electronic technical manuals and expert diagnostics systems, conducts intrusive testing in support of Army weapons and electronic systems, and provides a means to upload/download mission-critical software into weapon system on-board computer processors. The NGATS is a mobile, rapidly deployable, reconfigurable general-purpose automatic test system (ATS) which provides sustainment level maintenance testing and screening directly to the Army's major weapons systems in order to maintain the readiness and availability of combat systems. It maintains backward compatibility with previous IFTE versions, is Joint Services Next-Generation Test (NxTest) compliant, and includes interservice testing support capability. The NGATS is capable of satisfying field, sustainment and depot level test requirements for fault isolation, diagnostics and off-system repair of current and future weapons systems. It will be the single automatic test solution in the Army by incrementally replacing the Direct Support Electrical Systems Test Set (DSESTS), all previous IFTE Base Shop Test Facility versions, and depot system-specific automatic test equipment. The NGATS is the platform for transitioning Agile Rapid Global Combat Support System (ARGCS) technologies into the Army's weapon system support structure. The ARGCS initiative was sponsored by the Department of Defense (DoD), and all Services are expected to transition demonstrated technologies into their ATS programs.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
 FY 2014 Base procurement dollars in the amount of \$67.506 million support acquisition of test equipment to satisfy critical test and diagnostic requirements of Army warfighting systems such as Multiple Launch Rocket System, Mine-Resistant Ambush-Protected vehicle, Stryker, Patriot, Kiowa Warrior, Apache, Abrams, Bradley, Black Hawk, Chinook, and the Family of Medium Tactical Vehicles. Funding procures equipment and materiel to support a balanced investment strategy for the Army's approved force structure and Army Force Generation requirements.

 In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Remarks:

Unit costs vary from year to year depending upon the configurations purchased to meet projected fielding requirements. Maintenance Support Device (MSD) systems are costed and programmed at an average ratio of 60 percent with an Internal Combustion Engine (ICE) test adapter kit (MSD-ICE) and 40 percent without the ICE test adapter kit.

MFR #	MFR Name - Location	Production Rates (Each / Month)			Procurement Leadtime (Months)							
		MSR	1-8-5	MAX	Initial				Reorder			
					ALT Prior to Oct 1	ALT After Oct 1	Mfg PLT	Total After Oct 1	ALT Prior to Oct 1	ALT After Oct 1	Mfg PLT	Total After Oct 1
1	Miltope Corporation - Hope Hull, AL	2,400.00	3,600.00	13,680.00	-	22	19	41	-	3	5	8

Remarks:
 Production rates are annual rates. This item is being procured by other customers from the same production line; therefore, orders below the minimum production rate or lower than the 1-8-5 rate are economical.
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

MFR #	MFR Name - Location	Production Rates (Each / Month)			Procurement Leadtime (Months)							
		MSR	1-8-5	MAX	Initial				Reorder			
					ALT Prior to Oct 1	ALT After Oct 1	Mfg PLT	Total After Oct 1	ALT Prior to Oct 1	ALT After Oct 1	Mfg PLT	Total After Oct 1
1	TBS - TBD	4.00	16.00	30.00	8	8	18	26	-	-	-	-

Remarks:
 Production rates are annual rates.
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Description:

The Test Equipment Modernization (TEMOD) program improves the materiel readiness of Army weapon systems, minimizes general-purpose Test, Measurement, and Diagnostic Equipment (TMDE) proliferation and obsolescence and also reduces the Army's operation and support costs. These objectives are accomplished through the cost-effective acquisition of state-of-the-art test equipment that is employed for verifying accuracy, operability and safety of Army weapon systems and for supporting these systems at all maintenance levels. The TEMOD program procures general-purpose TMDE that supports all Army commodities and is essential to the continued support of weapon system platforms such as the Abrams Tank, Bradley Fighting Vehicle, Apache Helicopter, Patriot, and Single-Channel Ground and Airborne Radio System, as well as other weapon systems scheduled for fielding to the current and future forces.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
 FY 2014 Base procurement dollars in the amount of \$18.755 million support acquisition of additional quantities of the Radio Test Set (RTS), Telecommunications System Test Set, High End Oscilloscope, Radio Frequency (RF) Power Meter and Bench Level Radio Test Set, and initial procurement of the Low End Oscilloscope. The RTS provides diagnostic capability to accurately test radio communication signals using receiver sensitivity, squelch, forward and reverse power, and frequency measurements on the Single Channel Ground and Airborne Radio System (SINGARS) family of radios, ARC-186, ARC-201, GRC-245, PRC-148, PRC-150 and PSC-5 radios. The Telecommunications System Test Set analyzes signal quality between communication systems to ensure data exchange accurately. The High End Oscilloscope will be used to test, adjust, repair and align communications and electronic systems. The Bench Level Radio Test Set provides the capability to maintain Army tactical radios in single channel mode, is used to verify radio performance characteristics and to diagnose failures, and performs pre-programmed SINGARS family of radio tests. The RF Power Meter Test Set is a micro-processor-based solid state RF microwatt meter that has the ability to take measurements such as oscillator power, gain and insertion loss, RF attenuation, antenna, low-power transmitter, signal generator, standing wave ratio and return-loss measurements with directional couplers and slotted lines on radios, satellite communication systems and RADAR systems (Sentinel). The Low End Oscilloscope will be portable and used to test, adjust, repair, and align communications and electronic systems. Lack of these capabilities will impact unit readiness levels and incur unnecessary risks for Army personnel and equipment. By using a streamlined acquisition process, the TEMOD program realizes discounts of up to 55 percent from the manufacturers' suggested retail prices. In addition, TEMOD items typically carry seven-year extended warranties.

Approved Acquisition Objective (AAO): 30GHz Signal Generator - 1444; Radio Test Set - 8103; Telecommunications System Test Set - 468; Oscilloscope - 1564; RF Power Meter Test Set - 1305; Radio Test Set (Bench Level) - 945; Oscilloscope (Low End) - 3719.

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Description:

The Stabilized Binocular provides the Soldier, both mounted and dismounted, with enhanced target acquisition capability. The M25 is a high powered (14X magnification), hand held binocular which uses a gyro stabilizer to compensate for resolution degrading effects of using a hand held high powered optic and/or certain moving vehicular scenarios. It features interchangeable day and night vision eyepieces. The night vision inserts generally are procured as accessories. The authorized Army Acquisition Objective (AAO) is 18,300.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
 FY14 Base procurement dollars in the amount of \$5.110 million supports the Active Army and procures 647 M25 Stabilized Binoculars. The M25 allows the Soldier to perform target identification and battle damage assessment at extended ranges with increased on the move sighting capability. The M25 Stabilized Binocular is a mission essential equipment list item for the U.S. Army Security Forces. FY14 procurement supports a balanced investment strategy for the Army's approved force structure and Army Force Generation (ARFORGEN) requirements.

"A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

[#] FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

The United States Army Rapid Equipping Force (REF) was established in 2002 as a unique, singular organization designed to address an Army-wide, systemic deficiency in providing immediate technology solutions. The REF adds value for the Army by rapidly providing urgent capabilities to U.S. Army Forces employed globally by harnessing technologies in order to improve operational effectiveness. The REF canvasses the military, industry, academia and science communities for readily available commercial and government solutions that do not currently exist in the Army inventory, and then transitions successes to Army Materiel Command (AMC) for sustainment and in appropriate cases back to the Army Acquisition community as a Program of Record, for future life-cycle management. Additionally, the REF facilitates the early deployment of Army-managed solutions to meet emerging requirements.

The United States Army Rapid Equipping Force (REF) harnesses current and emerging technologies to provide rapid solutions to the urgently required capabilities of US Army forces employed globally. The REF combines and integrates functions that cross several Army staff elements and Army Service Component Commands (ASCC) to accelerate material solutions and technology insertion to forces on a global scale. The REF provides the Army's rapid response capability to develop, prototype, acquire and integrate Commercial-Off-The-Shelf and Government-Off-The-Shelf (COTS/GOTS) solutions to meet urgent combat requirements for deployed forces. It develops and inserts selected future force technologies, capabilities and surrogate material solutions into committed, deploying and transformational forces for operational evaluation, assessment and spiral development. It plans and executes assessments and studies of Army practices and issues concerning operational needs, desired future force capabilities and relevant Army business practices to provide feedback to Senior Army Leaders.

The REF bridges the gap between the lengthy acquisition process and immediate equipping needs. We pursue tangible solutions that can be equipped within a goal of 90 days. The REF focuses on finding effective game-changing capabilities to increase Soldier effectiveness, protection and lethality in any operational environment. The REF process provides the mechanism to respond rapidly to an adaptive enemy who changes in days and months, not years. The REF Teams deployed in theater work with Army Service Component Commands of the Combatant Commands (COCOMs) to understand their urgent needs, for which the REF acquisition capability may identify, procure and deliver solutions to the deployed units. A key element of this process is fiscal flexibility, permitting the REF to allocate funds against emerging threats and requirements in the year of fiscal execution.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
 FY14 procurement dollars in the amount of \$5.110 million (Base) meets urgently needed state of the art technology for immediate warfighter needs to deployed and pre-deploying forces across all Army Service Component Command of the Combatant Commands(COCOMs).

The REF works directly with Operational Commanders at Brigade and below to find solutions to identified equipping requirements. These solutions may result in procurement of new or existing military/commercial materiel equipment, or accelerated development of a Future Force materiel solution for insertion into the current force now.

- The REF key tasks are:
- Be responsive to tactical unit commanders engage Brigade Combat Team/Brigade Commanders (BCT/BDE CDRs) early and often
 - Bridge specific Operational Needs Statement/Joint Urgent Operational Needs Statement (ONS/JUONS) Gaps to meet urgent needs
 - In coordination with Asymmetric Warfare Group (AWG) develop materiel solutions to counter Asymmetric Threats
 - Ensure adequate training and sustainment are provided with every capability
 - Cultivate and rapidly insert emerging technologies into Soldiers hands
 - Conduct operational assessments to provide useful operator feedback to the Army
 - Transition effective projects through Capability Development for Rapid Transition (CDRT) to support long-term sustainment

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

Physical Security Systems (MA0780) protect vulnerable critical assets and infrastructure from determined, highly motivated and skilled intruders. Physical Security Systems include the Standard Intrusion Detection Systems (SIDS) (MA0781), the Commercial Intrusion Detection System (CIDS) (MA0782) and Other Physical Security Measures Equipment (MA0783). SIDS includes the Integrated Commercial Intrusion Detection System (ICIDS) and Military Construction Army (MCA) Procurement Tails. Other Physical Security Measures Equipment includes the Automated Installation Entry (AIE) program and other efforts consistent with Office of Provost Marshal General (OPMG) security measures. The Lighting Kit Motion Detector (LKMD)(M02004) system, which provides enhanced force protection via early warning of intruder activity, moved to the Base Defense System (M90101) in FY12 for Base funding and received OCO funding under this line in FY12.

The Physical Security program's goal is to provide enhanced security to units, installations and facilities. The Physical Security/Force Protection programs minimize risks and vulnerabilities by providing Commanders with the appropriate levels of protection through the use of available technology to safeguard personnel and Army assets. By increasing protection to personnel, facilities and equipment, the program supports unit readiness and deployment by reducing the vulnerability of units and installations to intruder and terrorist threats.

The Integrated Commercial Intrusion Detection System (ICIDS) program consists of commercially available interior and exterior sensors, response, entry control, electronic surveillance and command and control devices. ICIDS protects critical national assets, special compartmented information facilities, conventional munitions storage areas, non-nuclear missiles and rockets in a ready to fire configuration, sensitive munitions and other mission essential assets. ICIDS provides the capability for Commanders to detect, assess and respond to unauthorized entry or attempted intrusion into their facilities. The system provides security to units, installations and facilities while minimizing the number of security guards required. Additionally, the item includes Military Construction Army (MCA) Procurement tails for the Intrusion Detection Systems at new or modified facilities. ICIDS supports a balanced investment strategy for the Army approved force structure and Army Force Generation (ARFORGEN) requirements.

Commercial Intrusion Detection Systems (CIDS) provides security measures for conventional arms, ammunition and explosive storage facilities, sensitive compartment information facilities, areas designed as mission essential and vulnerable and other high risk targets. Risks and vulnerabilities are minimized by providing Commanders with the appropriate levels of protection through the use of available technology to safeguard personnel and Army assets. Equipment also protects personnel, facilities and equipment from terrorist or criminal threats. The program supports unit readiness and deployment by reducing unit installation vulnerability and supports the upgrades of the Intrusion and Detection Systems (IDS) for arms ammunition and explosives arms vaults and ammunition supply point bunkers for National Guard facilities that are non-compliant with current Army directives and converts existing analog to digital communications equipment. CIDS supports a balanced investment strategy for the Army's approved force

structure and Army Force Generation (ARFORGEN) requirements. Equipment further protects personnel, facilities and equipment from terrorist or criminal threats. The program supports unit readiness and deployment by reducing unit installation vulnerability.

Other Physical Security Measures Equipment includes the Automated Installation Entry (AIE) system which complies with DTM 09-012 for Access Control Standards that includes identity proofing and vetting to determine fitness of an individual requesting and/or requiring access to installations and issuance of local access credentials. AIE satisfies the Army Office of the Provost Marshal Generals Automated Access Control Standards. Installation of AIE will also meet recommendation 3.9 of the DOD Independent Review related to Ft Hood, TX.

UNCLASSIFIED

Exhibit P-40, Budget Item Justification Sheet: PB 2014 Army		Date: April 2013
Appropriation / Budget Activity / Budget Sub Activity: 2035A: Other Procurement, Army / BA 03: Other Support Equipment / BSA 90: Other Support Equipment		P-1 Line Item Nomenclature: MA0780 - Physical Security Systems (OPA3)
ID Code (A=Service Ready, B=Not Service Ready) :	Program Elements for Code B Items:	Other Related Program Elements:
MDAP/MAIS Code(s):		
Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.		

Justification:
 FY14 Base procurement funding in the amount of \$62.904 million provides funding for SIDS (MA0781) in the amount of \$25.283 million, CIDS (MA0782) in the amount of \$7.339 million and Other Physical Security Measures Equipment in the amount of \$30.282 million.

FY14 Base procurement funding the amount of \$25.283 million provides installation of ICIDS (MA0781) at seven (7) sites: Vincenza, IT; Ft. Riley, KS; and Livorno, IT; Ft. Polk, LA; Ft. Bliss, TX; Ft. Richardson, AK; Miami Garrison, FL; Prime Contractor Program Management; program support (direct government support and Systems Engineering and Technical Assistance) and MCA Procurement tails for seven (7) sites: Ft. Campbell, KY; Ft. Leonardwood, MO; Ft. Bliss, TX; Ft. Hood, TX; Ft. Lewis, WA; Ft. Carson, CO; and Yakima TC, WA. Funding supports a balanced investment strategy for the Army approved force structure and ARFORGEN requirements. Functioning is for Active Components.

FY14 Base procurement funding in the amount of \$7.339 million for CIDS (MA0782) supports procurement of modernized integrated physical security equipment for intrusion detection and assessment, access control, electronic surveillance and force protection equipment at Army Reserve and National Guard facilities and some Active Army locations. Funding provides security measures for conventional arms, ammunition and explosive storage facilities, sensitive compartment information facilities and other areas contain asset for which policy requires Intrusion Detection Systems. Risks and vulnerabilities are minimized by providing Commanders with the appropriate levels of protection through the use of available technology to safeguard personnel and Army assets. Funding supports a balanced investment strategy for the Army's approved force structure and ARFORGEN requirements.

FY14 Base procurement funding in the amount of \$30.282 million procures AIE (MA0783) systems at five (5) sites: Ft. Bliss, TX; Ft. Hood, TX; Ft. Drum, NY; Military Academy, Pine Bluff and Access Control Point Equipment Program (ACPEP). The AIE systems will be installed to protect Army force projection platforms and high priority installations. The system complies with DTM 09-012 for Access Control Standards that include identity validation and vetting to determine fitness of an individual requesting and/or requiring access to installations. The AIE System satisfies the Army Office of the Provost Marshal General's Automated Access Control Standards. Installation of AIE will also meet recommendation 3.9 of the DOD Independent Review related to Ft. Hood, TX. ACPEP provides standardized access control point configurations including barriers, canopies, ballistically protected guard booths and houses and surveillance cameras.

Remarks:
 Contract Option years are awarded in Mar of the FY. ICIDS Installations take approximately 12 to 18 months to complete from award of Task Order, extremely large installations can take up to 30 months to complete. MCA installs are estimated at 6 months from award. A = Active Component (COMPO1) ANG = National Guard (COMPO2) AR = Army Reserve (COMPO3)
 "A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

[#] FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

This program procures Base-level commercially available equipment from a list authorized by the Table of Distribution and Allowances (TDA) for Army activities but is not Army centrally managed or purchased. Equipment unit cost must meet the currently approved Expense-Investment threshold of \$250,000.00. The equipment supports recurring and generic activities typically performed by garrisons, such as material and cargo handling, engineering and public works, port and terminal operations support. Procures new investment items or replacements for existing equipment that is overaged, obsolete, or beyond economical repair.

	Secondary Distribution	FY 2012	FY 2013	FY 2014 Base	FY 2014 OCO	FY 2014 Total	FY 2015	FY 2016	FY 2017	FY 2018
Army	Quantity	-	-	-	-	-	-	-	-	-
	Total Obligation Authority	1.535	1.373	1.427	-	1.427	1.438	1.303	1.284	1.307

Justification:

FY14 Base procurement funding in the amount of \$1.427 million procures new equipment critical to military operations and readiness to provide garrison support to Major and Combatant Commands. Equipment is critical to maintaining installation roads and training areas needed by tactical units to maintain proficiency and combat readiness. Equipment supports maintaining road networks within the training areas; drop zones for airborne operations, landing zones for airmobile operations and ranges; and excavations supporting new range facilities, hard stands and emplacements. The equipment maintains road and parking drainage systems, and is also used for Force Protection operations to emplace concrete blocks and containers. Equipment replaces over-aged equipment with high utilization/increased deadline rates and uneconomical maintenance and repair costs. Equipment supports garrison requirements to correct environmental deficiencies and violations by excavating and transporting clean earth to environmental clean-up sites. Material handling, cargo handling and port operations equipment improves capabilities to mobilize, demobilize and out-load warfighting units.

[#] FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

This budget line funds modifications of in-service equipment programs. It is used to procure hardware, materials, and hardware installation cost required to complete the modification. Modifications are performed to correct safety deficiencies, increase mission capabilities, extend the useful life, improve supportability, upgrade existing technology, increase efficiency, improve readiness and to meet new and/or changing statutory and regulatory requirements. By modifying existing equipment, the Army maintains a ready, supportable inventory of equipment that meets current requirements and regulations at a cost considerably below that of buying new equipment. The US Army Watercraft Service Life Extension Program (SLEP) in prior FYs has been funded by MA4500, Modification of In-Service Equipment. As of FY 2014 the SLEP requirement has been moved to M11101 Army Watercraft Extended Service Program (ESP).

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
FY 2014 Base funding procures Construction Equipment (CE) and Material Handling Equipment (MHE) Technical Insertion modifications; weight reduction of selected components to allow armor addition onto already fielded M56 Smoke Generator systems; Food Sanitation Center; Resource and Operational Energy reduction kits for Force Provider; and Tactical Bridging Modifications including upgrading the Dry Support Bridge (DSB), the Improved Ribbon Bridge (IRB), and the Rapidly Emplaced Bridging System (REBS).

The FY 2014 Base procurement dollars in the amount of \$31.955M procures C4ISR modernization of the Landing Craft Utility (LCU2000) Vessels and Logistics Support Vessel (LSV), as well as upgrades/modifications to All Army Crafts (LSV, Landing Craft Utility (LCU2000) and Landing Craft Mechanized (LCM8), Modular Causeway System (MCS), Large Tug (LT800), Small Tug (ST900), and Barge Derrick (BD115)), which are completed as required to resolve any safety and/or sustainability issues, along with technical insertions. These upgrades will gain critically required operational improvements or maintain compliance with new and/or changing federal statutory and regulatory mandates in the areas of safety of life at sea and environmental compliance.

Upgrades/modifications to Countermine Clearing Equipment for Vehicle Optics Sensor System (VOSS), Husky Mounted Detection System (HMDS), Handheld Standoff Mine Detection Systems (HSTAMIDS) will extend the service life of these systems, currently used in theater. Upgrades/modifications to counter-explosive hazards detection and pre-detonation equipment will extend the service life of these systems currently used in theater.

[#] FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

This budget line funds modifications of in-service equipment programs. It is used to procure hardware, materials, and hardware installation cost required to complete the modification. Modifications are performed to correct safety deficiencies, increase mission capabilities, extend the useful life, improve supportability, upgrade existing technology, increase efficiency, improve readiness and to meet new legal and regulatory requirements. By modifying existing equipment, the Army maintains a ready, supportable inventory of equipment that meets current requirements and regulations at a cost considerably below that of buying new equipment.

FY 2014 Base funding procures Construction Equipment (CE) and Material Handling Equipment (MHE) Technical Insertion modifications; weight reduction of selected components to allow armor addition onto already fielded M56 Smoke Generator systems; Food Sanitation Center; Force Provider; and Tactical Bridging Modifications including upgrading the Dry Support Bridge (DSB), the Improved Ribbon Bridge (IRB), and the Rapidly Emplaced Bridging System (REBS).

FY 2014 Base funding procures C4ISR modernization of the Landing Craft Utility (LCU 2000) & Logistics Support Vessel (LSV) vessels, as well as upgrades/modifications to LSV, Army Lighters (Landing Craft Utility (LCU 2000) and Landing Craft Mechanized (LCM 8) and Army Floating Craft (Modular Causeway System (MCS), Large Tug (LT800), Small Tug (ST900), and Barge Derrick (BD115) are completed as required to resolve any safety and/or sustainability issues, along with technical insertions. These upgrades will gain critically required operational improvements or maintain compliance with new federal legal mandates in the areas of safety of life at sea and environmental compliance.

Upgrades/modifications to Countermine Clearing Equipment for Vehicle Optics Sensor System (VOSS), IED Interrogation Arm (IA), Husky Mounted Detection System (HMDS), AN/PSS-14 (HSTAMIDS), and Sparks Roller Set will extend the service life of these systems, currently used in theater. Upgrades/modifications to counter-explosive hazards detection and pre-detonation equipment will extend the service life of these systems currently used in theater.

UNCLASSIFIED

Exhibit P-3A, Individual Modification: PB 2014 Army		Date: April 2013
Appropriation / Budget Activity / Budget Sub Activity: 2035A: Other Procurement, Army / BA 03: Other Support Equipment / BSA 90: Other Support Equipment	P-1 Line Item Nomenclature: MA4500 - Modification Of In-Svc Equipment (OPA-3)	Modification Nomenclature <i>(Modification Number - Modification Title):</i> 000000000 - various
Models of Systems Affected: AWS,CE/,MHE,Bridging, FSS, PAWS, Countermine	Type Modification: Equipment Upgrade/Technical Insertion/Modernization/Tactical Bridging	Related RDT&E PEs:
<p>The AN/PSS-14 (HSTAMIDS) upgrade will correct safety and reliability/maintainability shortfalls of the systems identified by the combat developer and depot operations responsible for the reset and overhaul of this system. The modifications will include new electronic boards, hand controller hardware, and updated software to address the safety performance of the system. These upgrades will require training/fielding of the system to address the changes in system operation from current software/hardware configuration.</p>

[#] FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

This program provides funding to the Army Test and Evaluation Command (ATEC) to establish, modernize, expand or replace test facilities used in production testing of General Support Equipment (including trucks, trailers, generators, soldier support equipment, etc.). It sustains Army production test capabilities through upgrade and replacement of instrumentation and equipment that is technologically and/or economically obsolete. Modernization of test instrumentation and equipment provides increased automation and efficiencies, improved data quality and quantity and cost avoidances to Army Program Managers. Programmed funding will be used to upgrade or replace production test instrumentation and equipment at Aberdeen Test Center (ATC), Aberdeen Proving Ground, MD; and Yuma Test Center (YTC), Yuma Proving Ground, AZ (including YTCs Cold Regions Test Center (CRTC), Fort Greely, AK).

<p>FY14 Base procurement dollars in the amount of \$2.450 million support the following: At ATC, procures modern industrial shop equipment (welding and cutting machines) used in fabrication of support items required for Production Qualification Testing (such as rotors, stands, sleighs, camera mounts and instrumentation brackets); replaces old surveying equipment with modern digital systems used for surveying test sites; replaces Chemistry lab equipment (such as Mass Spectrometers) used in analyzing hazardous wastes and emissions from test items and non-destructive laboratory instrumentation and equipment used to test exotic materials being used in the design and fabrication of military systems such as ceramics, composites, and polymers; replaces laboratory equipment used to characterize high tech composite materials using use state of the art bonding and coating methods; replaces old instrumentation in the Fire Safety Test Enclosure lab used to test combat vehicle fire suppression systems and replaces instruments used in laboratory testing of physical measurements and material structural analysis of components and subsystems. At YTC, procures replacement transducers used to collect performance data during automotive tests (including sensors, load cells, thermocouple amplifiers, pressure transducers, embedded wireless sensors, strain gages, current transducers and thermocouples); and replaces costly film based imaging systems with digital cameras and recorders.</p> <p>The majority of the instrumentation being upgraded or replaced is obsolete and has met or exceeded its economic life. This instrumentation is required to ensure complete and accurate test data is collected and safety and environmental hazards are minimized. Benefits of this project include increased test efficiencies and decreased costs and risks to Army Program Managers.</p>

[#] FY 2013 Program is from the FY 2013 President's Budget, submitted February 2012

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

This Budget Item is comprised of multiple programs for the Army Threat Simulator Program and Major Operational Testing Instrumentation. The Army Threat Simulator Program procures actual foreign hardware and Non-Developmental Items (NDI) (e.g., chassis, subsystems, commercial equipment, or actual threat weapons), which are integrated into a threat simulator design for user testing and training. This program also provides funding for Major Operational Testing Instrumentation, major field instrumentation for Operational Testing (OT), Force Development Testing and Experimentation (FDTE), and Army Warfighting Experiments (AWE). Initiatives are tied to tactical systems that support each of the five joint functional concepts outlined in the Army Modernization Plan (Force Application; Protection; Focused Logistics; Battlespace Awareness; Command and Control). This Budget Item procures a variety of Special Equipment for User Testing, such as the Integrated Threat Force, Threat Signal Injection Jammer (TSIJ), Threat Operations, Threat Camouflage.

Army Test and Evaluation Command (ATEC) and Operational Test Command (OTC) facilities include Transformation Technology Directorate (TTD) at Fort Hood, TX; Fire Support Test Directorate (FSTD) at Fort Sill, OK; Airborne Special Operations Test Directorate (ABSOTD) at Fort Bragg, NC; Air Defense Artillery Test Directorate (ADATD) and Electronic Proving Ground (EPG) at Fort Huachuca, AZ.

Base procurement dollars support multiple threat systems required to support developmental and operational testing and training of threat scenarios. These threat scenarios are critical to integrating digital battlefield data collection and analysis tools. These tools will collect, store and analyze data from this new dimension of digital battlefield warfare. The ability to fully stress the entire battlefield with numerous simulated entities presents opportunities for significant cost savings and greater realism than would otherwise be achievable.

Justification:
 FY 2014 Base procurement dollars in the amount of \$11.593 million procures multiple threat systems required to support developmental and operational testing and training of network centric threat scenarios. These threat scenarios are critical to integrating digital battlefield data collection and analysis tools that support the establishment of robust command and control capabilities. These tools will collect, store and analyze data from this new dimension of digital command, and control battlefield warfare capabilities. The ability to fully stress the entire network centric battlefield with numerous simulated threat entities presents opportunities for significant cost savings and greater realism than would otherwise be achievable.

- Investments made in FY 2014 will procure test equipment that field in time to support:
- Apache Block III - Aug 2015 Force Development 3, Oct 2015 Follow-on Operational Test 2
 - Distributed Common Ground System - Army (DCGS-A) - Aug 2016 Mobile Basic Initial Operational Test
 - Medium Extended Air Defense System (MEADS) -March 2015 Initial Operational Test, April 2016 Increment 3 Force Development, Sep 2016 Increment 3 Initial Operational Test
 - Warfighter Information Network - (WIN-T) Mar 2017 Increment 3 Initial operational Test
 - Network Integration Evaluation (NIE) at White Sands Missile Range (WSMR) up to two times in FY 2014.
 - Joint Tactical Radio System (JTRS) - Jun 2015 Operational Test and Evaluation
 - Medium Extended Air Defense System (MEADS) - April 2016 Operational Test, Sep 2016 Follow-on Operational Test

"A" in the Delivery Schedule indicated the Contract Award Date.
 Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

Description:

The Army Materiel Command (AMC) identifies Table of Organizational Equipment (TOE) items with identifiable line item numbers (LINs) that have valid unit requirements and support Army force generation requirements. These LINs are: The Shop Equipment, Small Arms Set (LIN W51499) provides the necessary components for small arms field maintenance. Includes torque multiplier, impact wrench set, storage cabinet, hydraulic hand jack, a variety of hand and power tools, cabinets worktables, stools, etc. The Spare Part Storage Cabinet Set (LIN: T36305) and Electronic Systems Maintenance Tool Kit (LIN: T38254) toolsets provide the components to accomplish direct and general support for maintenance functions on combat vehicles fire control systems. Authorized Stockage List Mobility System (ASLMS)(LIN: A04334) is a modified version of the FPU-8-2/Boh Cargo-12 combination system designed to mobilize and store Class IX repair parts. ASLMS is designed to be transported by all ground modes, including HEMTT-LHS and PLS without a flatrack. The Electronic Systems Maintenance Tool Kit (LIN: T38254) provides the components to accomplish direct and general support for maintenance functions on combat vehicles fire control systems. The Tool Kit, Engineer Rigging & Wire Rope Repair Tool kit (LIN W50266) contains components required for engineer rigging activities as well as repair components needed in wire rope repairs. The ISO shelter (LIN: S01359) is a rigid-wall shelter two-sided expansion. Power requirements are 60 amps/100 amps. The ISO provides a mobile, environmentally-controlled working/living space used by the Chemical, Biological, Radiological, Nuclear and High Yield Explosive (CBRNE) Consequence Management Reaction Force (CCMRF) and provides medical facilities; i.e. operating rooms, Dentist Office, Pharmacy. ISO shelter is also used for Command Centers, Classroom, and operator's system control station. The Surveying Set General Purpose (LIN: U70179) set is used by soldiers to conduct surveys essential to road, airfield, building and utility construction. The Torch Outfit Cutting and Welding: ORG Maintenance Set No. 5 (LIN W67725): Provides necessary components to perform normal welding and cutting operations. The M152 Remote Activation Munitions System (M152 RAMS) (LIN: F91210) provides the soldier with means to remotely control the detonation of demolition charges. The RAMS can be used in all geographical areas, weather conditions, and hostile battlefield conditions that include countermeasures, smoke, dust, nuclear, biological and chemical attack, indirect artillery fire, and small arms fire. The Individual Swimmer Support Set (LIN: D49154) is comprised of multiple components that support Special Operations infiltration/exfiltration missions.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:
 The FY14 Base Procurement funding of \$8.948 million will support quantity 335 each of the following TACOM-LCMC Missions:
 Authorized Shortage List Mobility Sets: Department of the Army has increased the requirement of Stryker Brigade Combat Teams to have qty 4ea ASLMS in each brigade. Additionally, two SBCTs and 1 EAD are being stood up and require the ASLMS.
 Surface Swimmer Support Sets: There is an extreme shortage of the Surface Swimmer Support Set which supports infiltration and exfiltration for Special Operations Combat Divers. The required authorizations tripled over a short period of time to support future capabilities and requirements for the Army. The current Equipment on Hand is 38%, it is expected to increase slightly until FY15. The system encompasses 12 different legacy systems for Engineers, Special Forces, and new intelligence gathering units.
 M152 Demolition Firing Device: The current Equipment on Hand (EOH) for the M152 RAMS is 55%. The ARFORGEN Available Pool is short 361 each, the Ready Pool is short 361 each, the Reset Pool is short 191 each for a total ARFORGEN shortage of 662 each M152 RAMS. Additionally, there are 7 units reporting this item as a readiness driver. It has an OCT ranking of 1560.
 M257 Smoke Grenade Launchers: Funding is required to produce additional smoke grenade launchers (SGL) systems to support increasing U.S. Military and government furnished equipment, (GFE) requirements in support of allied nations in SWA. Limited production was reinitiated in FY11 to replace GFE assets and to provide additional assets beyond those available through refurbishment of existing systems. The M257 SGL system is used extensively with the M2/M3 series BFVS family of vehicles, the M1117 ASV and M1 series tank (USMC). The M257 is a separate CL VII item integral to each of these vehicle systems required to provide screening smoke while operating in hostile environments.
 Rigid Wall Shelters: Shelters are necessary for providing field workstations and communications equipment to deployed units. Currently units are deploying with full authorization negatively impacting unit readiness and mission.
 Shop and Tool Sets: Additionally, procurements of shop sets and tool sets will allow the Army to support unit missions both CONUS and OCNUS. Currently, units are deploying without their full authorizations which negatively impacts sustainment and Army equipment.

Exhibit P-21, Budget Production Schedule: PB 2014 Army		Date: April 2013
Appropriation / Budget Activity / Budget Sub Activity: 2035A: Other Procurement, Army / BA 03: Other Support Equipment / BSA 90: Other Support Equipment	P-1 Line Item Nomenclature: G01001 - AMC Critical Items OPA3	Item Nomenclature: G01001 - AMC Critical Items OPA3

Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 99,999, all quantities are shown as each. If the maximum quantity is between 100,000 and 99,999,499 all quantities are shown in thousands (rounded to the nearest thousand). If the maximum quantity is greater than 99,999,499 all quantities are shown in millions (rounded to the nearest million).

^{##} The FY 2014 OCO Request will be submitted at a later date

Description:

The Small Unmanned Ground Vehicle (SUGV), designated as the XM1216, is a lightweight (32 lbs), man-portable, direct current powered UGV capable of conducting Military Operations in Urban Terrain (MOUT), including tunnels, sewers, and caves. The SUGV provides an unmanned capability for those missions that are manpower intensive or high-risk such as Urban Intelligence, Surveillance, and Reconnaissance (ISR) missions in a MOUT environment, investigating Improvised Explosive Devices and chemical/toxic materials reconnaissance missions without exposing soldiers directly to the hazard. The SUGV will be used to obtain situational awareness information at the squad level.

SUGV XM1216 Increment 1: The INC 1 SUGV is based on the Infantry Brigade Combat Team (IBCT) Capability Production Document (CPD) threshold requirements. The SUGV XM1216 INC 1 features a lightweight highly mobile SUGV platform with improved and tested reliability and an integrated Commercial Off The Shelf (COTS) sensor head and radio. In early FY10 the SUGV INC 1 platform underwent an Independent Verification Test (IVT) at Aberdeen Test Center (ATC) that provided the basis for many of the component reliability improvements that have been incorporated and validated in the FY11 Initial Qualification Test (IQT). Enhancements included improved seals on the drive motors, design changes to the drive motors themselves, Electromagnetic Interference (EMI) improvements to reduce the emissions and susceptibility of the SUGV platform and operator control unit enhancements. The Mean Time Between System Aborts (MTBSA) value improved from 9.7 hrs in FY09 to 178 hrs in FY10 Limited User Test (LUT). These enhancements were incorporated into the Bde 1 SUGV INC 1 units delivered to 3 1AD unit in Ft. Bliss, TX in FY11. The unit deployed and returned from OEF in FY12.

In prior submissions, when this program line was under PEO Integration, quantities were in BCTs not actual system quantities.

Operational Impact:

The SUGV provides the infantry platoon with the ability to conduct missions that either are manpower intensive or high-risk such as Intelligence, Surveillance, and Reconnaissance (ISR) missions in a MOUT or Chemical/Toxic environment without exposing soldiers directly to the hazard. The Army is fielding the expedited SUGV into IBCT formations to provide additional Intelligence, Surveillance and Reconnaissance (ISR) capability to the soldier.

*Item Nomenclature represents Item Number, DODIC, and Item Name for the P40A and P5; Name for the P18 and P23; Modification Number and Modification Title for the P3A; Item Number and Item Name for the P10.

Note: Totals in this Exhibit P-40 set may not be exact or add due to rounding.

Justification:

FY 2014 Base procurement funding in the amount of \$59.700 million procures Depot Level Repairable (DLR) secondary items from the Supply Management, Army activity of the Army Working Capital Fund. To provide initial support, funds are normally required in the same year that end items are fielded.
