MILITARY CONSTRUCTION, ARMY RESERVE FY 2019 BUDGET SUMMARY

The military construction program for the Army Reserve shown in the schedules of this title is summarized in the following tabulation:

FISCAL YEAR		nstructiom. An	-
		CR	Total
2019	64,919,000		64,919,000
2018	73,712,000	33,851,000	107,563,000
2017	108,230,000		108,230,000
2016	147,795,000		147,795,000

- 1. <u>Major Construction</u>. The MCAR major construction program is one of the most visible means of improving Army Reserve facility working conditions. This program provides funding for military construction projects in the United States and Territories as authorized in the Military Construction Acts and in this year's request for Authorization and Appropriations. This request funds the Army Reserve's most critical facilities needs within the context of the Army's facility strategy.
- 2. <u>Minor Construction</u>. Provision is made for construction of unspecified projects that have not been individually authorized by law, but are determined to be urgent requirements that do not exceed the \$6.0 million threshold established in 10 USC 2805.
- 3. <u>Planning & Design</u>. This provides for necessary planning of military construction projects including design, surveys, studies, and other related activities. In general, design funds requested in fiscal year 2019 will be used to design projects in the Army Reserve Fiscal Years 2020 and 2021 programs. All projects will be planned, programmed, budgeted, designed, built, and reported to meet the requirements of UFC 1-200-02 High Performance and Sustainable Building Requirements, 1 March 2013 with the additional requirements stipulated in the Assistant Secretary of the Army (Installations, Energy, and the Environment) Sustainable Design and Development Policy Update Memo dated 16 December 2013.

MILITARY CONSTRUCTION, ARMY RESERVE

FY 2019 BUDGET ESTIMATE

APPROPRIATION LANGUAGE

For acquisition, construction, expansion, rehabilitation, and conversion of facilities for the training and administration of the Army Reserve as authorized by Chapter 1803 of Title 10, United States Code and Military Construction Authorization Act, \$64,919,000 to remain available until September 30, 2023.

MILITARY CONSTRUCTION, ARMY RESERVE

FY 2019 BUDGET ESTIMATE

SPECIAL PROGRAM CONSIDERATIONS

Pollution Abatement

Military construction projects proposed in this program will be designed to meet environmental standards. Projects proposed primarily for abatement of existing pollution problems have been reviewed to ensure that corrective design is accomplished in accordance with specific standards and criteria. This submission contains no projects specific to pollution abatement.

Energy Conservation

Military construction projects specifically for energy conservation have been developed, reviewed, and selected with prioritization by energy savings per investment cost. Any project proposed primarily for energy conservation includes improvements to existing facilities and utilities systems to upgrade design, eliminate waste, and install energy savings devices. Projects are designed for minimum energy consumption.

Flood Plain Management and Wetlands Protection

Proposed land acquisitions, disposals, and installation construction projects have been planned to allow for the proper management of flood plains and the protection of wetlands by avoiding long and short term adverse degradation of wetlands. Project planning is in accordance with the requirements of Executive Order Nos. 11988 and 11990.

Design for Accessibility of Physically Handicapped Personnel

In accordance with Public Law 90-480, provision for physically handicapped personnel will be provided for, where appropriate in the design of facilities included in this program.

Environmental Protection

In accordance with Section 102 (2) (c) of the National Environmental Policy Act of 1969 (PL 91-190), the environmental impact analysis process has been completed or is actively underway for all projects in the Military Construction Program.

SPECIAL PROGRAM CONSIDERATIONS

(Continued)

Reserve Potential/Placement of Reserve Component Units in Local Communities

The Reserve potential to meet and maintain authorized strengths of all Reserve flying/nonflying units in those areas in which these facilities are to be located has been reviewed. It has been determined, in coordination with all other Services having Reserve flying/nonflying units in these areas, that the number of units of the Reserve Components of the Armed forces presently located in those areas, and those which have been allocated to the areas for future activation, is not and will not be larger than the number that reasonably can be expected to be maintained at authorized strength considering the number of persons living in the areas who are qualified for membership in those Reserve units.

Preservation of Historical Sites and Structures

Facilities included in this program do not directly or indirectly affect a district, site, building, structure, object, or setting listed in the National Register of Historical Places, except as noted on DD Form 1391.

Use of Excess Schools and Other Buildings

Considerations were made to utilize available commercial or academic buildings but none were suitable except as identified by specific projects in this request.

Congressionally Directed Projects

No projects were directed by any congressional committee for inclusion in the FY 2019 budget.

Other Congressional – Planning and Design

No considerations are made for directed planning and design projects in the FY 2019 budget.

MILITARY CONSTRUCTION ARMY RESERVE FY 2019 PRESIDENT BUDGET

PROGRAM ASSESSMENT RATING TOOL

In accordance with the President's Management Agenda, Budget and Performance Integration initiative, this program has been assessed using the Program Assessment Rating Tool (PART). Remarks regarding program performance and plans for performance improvement can be located at the Expectmore.gov website.

Parking Issues at DoD Facilities

This exhibit is submitted in response to House Report 115-188, "The Military Construction, Veterans Affairs, and Related Agencies Appropriations Bill, 2018", page 28, which states:

"Parking issues at DOD facilities. ---Military construction budget constraints are negatively affecting the ability of the Department of Defense to address urgent parking requirements at certain U.S. military installations. The lack of parking is a safety issue and a detriment to the well-being of the employees, both civilian and military. The committee is concerned that many DOD facilities in the Departments inventory do not have sufficient parking to meet installation requirements. Furthermore, these deficiencies can contribute to traffic congestion and are serious problems on base. The Committee is concerned that the Department does not have a coherent strategy to address the growing parking requirements at installations that have significant growth. For example, Fort Meade, which already was home to the National Security Agency (NSA), became the headquarters for the newly formed U.S. Cyber Command in 2010. By 2011, the Defense Information Systems Agency, which handles the Pentagon's IT and communications needs, had moved onto the base. In 2005, the base had just over 33,500 employees. Today it has about 57,000, more than double the numbers of the workers at the Pentagon. As a result of this growth, parking at Fort Meade has become a serious issue. Therefore, the Secretary of Defense is directed to submit to the Committee with the fiscal year 2019 military construction budget request: an updated list of unfunded requirements for parking facilities, access control points, and road construction at DOD facilities that have serious parking, access, and road congestion issues. Finally, the Secretary is further directed to submit, with the fiscal year 2019 military construction budget request, a list of how those requirements will be incorporated into their construction requests for fiscal years 2019 through 2023."

10. Description of Proposed Construction Construct a Modified Tactical Equipment Maintenance Facility (TEMF) and General Purpose Warehouse in the vicinity of Barstow, CA for Equipment Concentration Site (ECS) 171. Supporting facilities include land clearing, utility connections, concrete aprons, gravel Privately-Owned Vehicle (POV) parking, two vehicle wash racks, equipment loading ramp and an overhead crane spanning work bays. Accessibility for the disabled will be provided. Antiterrorism/Force Protection (AT/FP) and physical security measures will be incorporated into the design including maximum standoff distances from roads, parking areas and vehicle unloading areas. Sustainability/Energy measures will be provided. Facilities will be designed to a minimum life of 40 years in accordance with DoD's Unified Facilities Criteria (UFC 1-200-02) including energy efficiencies, building envelope and integrated building systems performance. Dispose of 2 buildings at Barstow, CA (Total 1,301 m2/14,000 SF). Air Conditioning (Estimated 113 kWr/32 Tons).

11. REQ: 7,303 m2 ADQT: NONE SUBSTD: 1,301 m2

PROJECT: Construct a Modified TEMF and General Purpose Warehouse for ECS 171 in the vicinity of Barstow, CA. (Current Mission)

REQUIREMENT: To be located at Barstow Marine Corps Logistics Base (MCLB), in support of Total Army Training Integration Mission, this project will provide 46 acres of land and a modified TEMF with standard 32'x96' drive-thru work bays (comprised of six 16'x32' work areas per bay), work bay safety aisle, commo/electronics shop, small arms repair/vault, equipment alcove, tool/parts/storage, flammable/controlled waste storage, fluid

restrooms/lockers, mechanical/telecom room, overhead crane, and concrete aprons for ECS

distribution, battery room, classroom/break area/library, shop offices,

REQUIREMENT: (CONTINUED)

The project will also provide a high-bay general purpose warehouse with offices, restrooms, and storage racks. Vehicle wash rack/platform(s), bi-level equipment loading ramp, and adequate parking space for POV parking will also be provided. Gravel Military Equipment Park (MEP) lot requirement was provided for under the FY16 Minor Military Construction Army Reserve (MMCAR) project. No building demolition and/or temporary construction lease required, however the demolition of existing sidewalks, security fencing and a septic tank are required prior to construction. Upon project completion the 3,200 square foot temporary metal building will be returned to Marine Corps Logistics Base (MCLB), Barstow and the 10,800 square foot lease will be terminated. CURRENT SITUATION: ECS 171 is currently located in a temporary metal building, approximately 3,200 square feet, permitted to the Army Reserve by MCLB and a commercial lease facility approximately 10,800 square feet, costing \$96,000 per year, located off site in Barstow. The ECS includes seventy eight full-time automotive engineers positions including contractors; nine full-time administrative personnel, four electrical, four small arms repair technicians, sixty one mechanics, and 1,491 vehicles and equipment. The ECS provides support to 173 units, of which 72 units are within the 63rd RSC region and 53 units are from outside the region. 42 percent of all the equipment stored at ECS 171 comes from outside the 63rd RSC. The metal building consists of approximately 3,200 square feet with a utilization rate of 1,200 percent. It lacks an HVAC cooling system and smoke/fire detection sprinkler system. The storage yard at the temporary maintenance facility is at capacity with 406 pieces of rolling stock. The overflow yard is comprised of 46 acres with both fenced and unfenced areas. Fenced overflow is at capacity with 400 pieces of rolling stock and unfenced overflow has 145 pieces of rolling stock. For the future shop master plan, ECS 171 will be expanding to accommodate 2,351 military vehicles, hold overflow equipment for Fort Hunter Liggett and Fort Irwin annual training. The existing building does not have the capacity to house the unit personnel and equipment for the ECS 171mission and lacking important administrative and vehicle support area. Terminate commercial lease and return permitted property to USMC upon project completion.

IMPACT IF NOT PROVIDED: If the project is not provided, the Army Reserve will not be positioned to properly support Total Army Training Integration at the National Training Center Fort Irwin, CA. This ECS is used to stage equipment for units executing missions at NTC in support of Active Component exercises. This location is used to stage equipment for Army Reserve units in the greater California basin and surrounding states to reduce the maintenance requirements of units at Home Station. Without the required maintenance capability at the ECS there is greater risk that equipment will not be maintained to standard and will not be ready for units when they are called upon to mobilize and deploy.

ADDITIONAL: Required assessments have been made for supporting facilities and the project is not in a 100-year floodplain in-accordance-with Executive Order 11988. This project has been coordinated with the installation physical security plan, and all physical security measures are included. All required antiterrorism protection measures are included. Alternative methods of meeting this requirement have been explored during project development. This project is the only feasible option to meet the requirement. The Deputy Assistant Secretary of the Army (Installations, Housing and Partnerships)

Construct a Transient Training (TT) Enlisted Barracks for 10. Description of Proposed Construction Major Exercises, Annual Training, Battle Assembly, and Mobilization training at Fort McCoy, WI. This TT Enlisted Barracks floorplan will be based on the standard design Operational Readiness Training Complex (ORTC), but will be adapted to match Fort McCoy's current, standardized barracks floorplan (approved by the Barracks Center of Standardization). The Fort McCoy standard design barracks incorporates the contingency for lockable, fully functional modular bays. Each modular bay will include an open bay barracks area, showers, bathrooms, and laundry capabilities. These modular bays will maximize the number of usable beds within the facility and accommodate the fluxuating, non-standardized numbers of transient units by providing male/female separation and unit integrity. The facility will be deactivated and/or taken off-line during the winter months when necessary. When Fort McCoy is not stood-up as a mobilization platform, its primary mission is to support the seasonally driven requirement(s) of transient training. Deactivation of barracks buildings during the winter months conserves energy and saves utility dollars. Project will include information systems, fire protection and alarm systems, video surveillance system installation, Intrusion Detection System (IDS) installation, and Energy Monitoring Control Systems (EMCS) connection. Supporting facilities include site development, utilities and connections, lighting, paving, parking, walks, curbs and gutters, storm drainage, information systems, landscaping and signage. Heating and air conditioning will be provided by self contained system. Comprehensive building and furnishings related interior design services are required. Antiterrorism/Force Protection (AT/FP) and physical security measures will be
