"A" in the Delivery Schedule indicates the Contract Award Date.

**Note:** Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand).If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

**Description:**

This funding line provides support to the Soldier Lethality Army Modernization priority.

There are currently two production variants in the Family of Weapon Sights (FWS): FWS-Individual (FWS-I) and FWS-Sniper (FWS-S). The FWS program enables combat forces to acquire and engage targets with small arms and to conduct surveillance and fire control under day/night obscurants, no-light, and adverse weather conditions. The FWS utilizes advancements in thermal and low light level sensors to produce sights operable in-line with a day optic or in stand-alone mode. The FWS program integrates smaller pixel focal plane arrays into multiple large format sizes to improve sensitivity, clarity, and range, while simultaneously reducing the size, weight and power consumption of all variants.

The FWS-I variant is a weapon mounted thermal sensor that enables Soldiers to fire quickly and accurately from any carry position and with significantly reduced exposure to enemy fire by providing a wireless zeroed weapon aimpoint in the Soldier's Enhanced Night Vision Goggle-Binocular (ENVG-B) or Integrated Visual Augmentation System (IVAS). This funding line is a key enabler of the Army Modernization Priorities in support of day/night situational awareness for the Close Combat Soldier.

The FWS-S variant mounts in-line with the Sniper's direct view optic providing a thermal imagery capability to the host weapon at the weapon's maximum effective range, plus 20% overmatch. FWS-S provides Snipers a large format display with increased pixel density that enables accurate long range engagements while maintaining day sight, extending the lethality and providing exceptional observation. This funding line provides support to the Close Combat Soldier in the area of situational awareness.

The FWS-Crew Served (FWS-CS) program was terminated in FY2024.

FWS-I funding supports the Army's Soldier Lethality Cross Functional Teams (SL CFT) initiatives.

FWS-I Army Acquisition Objective (AAO) is 111,642. Official AAO approval is pending. This aligns with Next Generation Squad Weapons and IVAS.

FWS-S AAO has been increased to 3,667.

<sup>(†)</sup> indicates the presence of a P-21

**Remarks:**  
FY25 and FY26 quantities and unit costs are notional, pending the outcome of competition between the two vendors (DRS and Teledyne FLIR) for delivery orders in the year of execution.

"A" in the Delivery Schedule indicates the Contract Award Date.

**Note:** Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand).If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

**Description:**  
The Enhanced Portable Inductive Artillery Fuze Setter (EPIAFS) program supports the Army's Cannon Transformation Strategy and is a critical system required to enable setting with current and future Precision Guided Munitions (PGMs) and Fuzes, as well as 155mm weapon system platforms. The EPIAFS systems provide direct set capability to integrate with modernized ammunition, electronics/hardware to enable new data requirements and software updates that provide new initialization data sets to support legacy and future platforms, precision artillery projectiles and precision fuzes. Future PGMs and Fuzes will incorporate guidance technologies that will require more data for initialization in less time to support higher rates of fire providing overmatching capability.

| Justification:<br>Fiscal Year (FY) 2026 Base procurement dollars in the amount of \$10.456 million supports the procurement of 300 modernized Enhanced Portable Inductive Artillery Fuze Setter (EPIAFS) systems that include an improved Platform Integration Kit (iPIK-M) as well as the ability to complete Direct Set Interface required to set Precision Guidance Munitions (PGMs) and Fuzes with current and future 155mm weapon systems. Funding will also support nonrecurring engineering efforts to mitigate obsolescence, upgrade software and improve platform integration components. These critical efforts will reduce hardware obsolescence and system failures as well as enable flexibility and long-term viability in support of the Army's Cannon Transformation Strategy. |                                                            |             |       |                                        |                                       |                                                                                                 |                                       |                                       |                                       |                                       |

**Remarks:**  
Hardware Cost - Unit cost each year is based on a linear curve with decreasing prices from high quantity procurement. It is a sliding scale with lower unit costs as quantities increase and higher unit costs as quantities decrease.

Software and Support Costs - FY 2026 cost increase due to increased quantity procurement of modernized Enhanced Portable Inductive Artillery Fuze Setter (EPIAFS) systems required to enable setting with current and future Precision Guided Munitions (PGMs) and Fuzes, as well as 155mm weapon system platforms.

"A" in the Delivery Schedule indicates the Contract Award Date.

**Note:** Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand).If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

| <b>Description:</b><br>The 3rd Generation Forward Looking Infrared (3GEN FLIR) B-Kit incorporates Mid Wave Infrared and Long Wave Infrared digital video and the electronic interfaces required to integrate the 3GEN FLIR technology with the host platform sensor. Incorporation of the 3GEN FLIR technology improves sensor performance restoring sensor overmatch which enhances the warfighters' survivability and lethality through increased identification range performance, while enabling the detection of difficult or obscured targets and faster threat detection through automated processes; positioning 3GEN FLIR as the lead sensor to provide the Army's path forward for AI/ML sensor capabilities for ground platforms. The 3GEN FLIR B-Kit design represents a common sensor solution for integration across US Army FLIR sensor systems providing the Army the opportunity to achieve economies of scale and reduce procurement and sustainment costs. Currently, the 3GEN FLIR B-Kit program's procurement efforts are focused on maturing the 3GEN FLIR production line and the XM30 and FALCONS requirements. |                                   |                |                |                                               |                    |                      |                                                                                       |                                            |                |                        |                    |              |

**Remarks:**  
Raytheon is the lead integrator for the 3GEN FLIR B-Kit. A second LRIP contract with DRS for the Dewar Cooler Bench (DCB), managed by PM GS, provides the DCB as GFE to RIS for B-Kit integration. The unit costs above represents the full B-Kit cost inclusive of the DCB.

"A" in the Delivery Schedule indicates the Contract Award Date.

**Note:** Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand).If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

SSN AD0514 / DIRECTED ENERGY (DE) is a new start within the COUNTER SMALL UNMANNED AERIAL SYSTEM (C-SUAS) program in FY 2026

This line has no funding for FY 2026.

FY 2026 funding was realigned from Budget Activity (BA) 2, AD0500 COUNTER SMALL UNMANNED AERIAL SYSTEM (C-SUAS) to BA 6, I24000 COUNTER-SMALL UNMANNED AERIAL SYSTEM (C-SUAS) in support of Agile Portfolio Management.

Advances in unmanned aircraft systems (UAS) technology and ease of accessibility increase the potential use of UAS as weapons and intelligence-gathering mechanisms against U.S. forces and Department of Defense (DoD) facilities. Funds support the procurement, training, and equipping of fixed, semi-fixed, mounted, dismounted, and handheld counter-UAS capabilities for U.S. forces and strategically-important DoD facilities worldwide. Planned counter-UAS capability procurements provide a layered defense construct against UAS threats and include a mix of electronic warfare capabilities, command and control, and kinetic and non-kinetic effectors.

The Counter-small Unmanned Aircraft Systems (C-sUAS) system-of-systems was initiated in JUN 2016 in response to Joint Urgent Operational Need (JUON) CC-0558, to detect, track, classify, evaluate, and defeat Groups 1 and 2 UAS threats. On 19 NOV 2021, the Army Requirements Oversight Council approved C-sUAS Capability Development Document (CDD) Increment 1 for a C-sUAS capability at Operational Divisions (now C-UAS Batteries). On 1 FEB 2022, the Chief of Staff of the Army (CSA) accelerated C-sUAS procurement into FY 2022 (from FY 2023) and specified the systems and quantities for each battery. This CSA guidance was documented in a 2 FEB 2022 Department of the Army Military Operations Fires Division (DAMO-Fires) memorandum. In a 30 MAR 2022 Acquisition Decision Memorandum (ADM), the Army Acquisition Executive (AAE) authorized use of the Major Capability Acquisition (MCA) pathway for five separate Acquisition Category III programs: Fixed Site-Low, slow, small Unmanned Aircraft System (UAS) Integrated Defeat System (FS-LIDS); Mobile-Low, slow, small UAS Integrated Defeat System (M-LIDS); Ku-band Radio Frequency System (KuRFS) Family of Radars; Coyote Launchers/Interceptors; and Handheld/Dismounted Systems. Following an 8 MAY 2024 program initiation briefing to the Milestone Decision Authority, the C-sUAS programs were approved for entry into the MCA pathway at post-Full Rate Production (FRP).

Enduring programs are required to develop, test, evaluate, and continuously integrate solutions, to address a rapidly-emerging UAS threat that continues to grow in sophistication, range, lethality, and numbers. Both Joint and Army RDTE will develop Joint and Army-unique solutions that will be procured under this budget line.

| Description:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                            |         |         |                                        |             |                                                                                       |         |                                          |         |         |             |       |
| This funding line supports the Mounted Mission Command (MMC) Family of Systems (FoS) and supports the Army Next Generation Command and Control (NGC2) initiative to modernize Command and Control (C2) systems, Infrastructure layer. The MMC FoS is comprised of the MMC Transport (MMC-T) and MMC Software (MMC-S) programs, which provide the replacement for the Blue Force Tracking (BFT) hardware and software capability, by employing hardened cyber/electronic warfare advancements that will improve data sharing and enhance C2 on-the move (C2OTM) functionality, resulting in more reliable communications anytime, anywhere, in all domains. |                            |         |         |                                        |             |                                                                                       |         |                                          |         |         |             |       |
| The MMC-T program provides next-generation transceivers, encryption devices, and satellite communication waveforms (which are hosted in the transceiver). MMC-T provides a significant improvement over the existing BFT-2 capability by enabling smart routing across multiple network paths (Geosynchronous Equatorial Orbit (GEO), Low-Earth Orbit (LEO), and Line of Sight (LoS)) to mitigate risks posed by denied environments or signal jamming. New encryption devices provide protections against electronic warfare (EW) and cyber attacks.                                                                                                      |                            |         |         |                                        |             |                                                                                       |         |                                          |         |         |             |       |
| The MMC-S program replaces JBC-P software on vehicles and in command posts by providing next generation C2/SA software that offers simplicity, intuitiveness, and enhanced capabilities over the legacy software. MMC-S utilizes the Tactical Assault Kit (TAK), a Government-owned application, to enable convergence of Warfighting Functions and utilizes an agile Continuous Integration/Continuous Delivery (CI/CD) approach for software development.                                                                                                                                                                                                |                            |         |         |                                        |             |                                                                                       |         |                                          |         |         |             |       |
| The MMC FoS Basis of Issue (BOI) and the proposed Army Acquisition Objective (AAO) are being developed and will be validated through the Army Requirements Oversight Council (AROC). Fielding MMC allows the Army to divest the legacy system (JBC-P). As MMC-T hardware and MMC-S are fielded, overall cyber resilience will improve.                                                                                                                                                                                                                                                                                                                     |                            |         |         |                                        |             |                                                                                       |         |                                          |         |         |             |       |

**Justification:**  
FY 2026 Procurement dollars in the amount of \$165.395 million supports the procurement of MMC-T transceivers, encryption devices, program management support, training, fielding, publications, engineering services, depot maintenance, test and evaluation, support equipment (including BFT-2 Satellite Ground Stations (SGS)), BFT-2 network services, platform integration, and firmware updates and software enhancements to maintain survivability and to counter threats. Funding also covers MMC-T and MMC-S Post Deployment Software Support (PDSS). Funding continues modernization and replacement of the legacy JBC-P capability through MMC-T/MMC-S platform integration. Other major efforts include MMC-T fielding, as well as MMC-S safety certification on Integrated Firing platforms.

In accordance with section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110 - 181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

| 1) Flyaway, Recurring, MMC-T Transceivers and Encryption Devices: Funding decrease in FY 2026 due to an increase in other costs associated with integration kit non-recurring engineering, platform integration, and test and integration (FAQT). The projected unit cost is based on a rollup of the transceiver, encryption device, LoS waveform card, and other IK costs. |                     |               |                      |                     |               |                                                                                       |                     |               |                      |                     |               |                                                                                  |                     |               |                      |                     |               |                      |
| 2) Flyaway, Non-Recurring, Platform Integration: Funding increase due to additional platform integration requirements for MMC-S.                                                                                                                                                                                                                                             |                     |               |                      |                     |               |                                                                                       |                     |               |                      |                     |               |                                                                                  |                     |               |                      |                     |               |                      |
| 3) Flyaway, Non-Recurring, Platform Integration - MMC-T: New cost element to address start of MMC-T platform integration for the Bradley M2A4 & M7A4 BFIST, AMPV, Abrams M1A2 SEPv3, Stryker DVH-A1, M10 Booker.                                                                                                                                                             |                     |               |                      |                     |               |                                                                                       |                     |               |                      |                     |               |                                                                                  |                     |               |                      |                     |               |                      |
| 4) Flyaway, Non-Recurring, Satellite Ground Stations (SGS) Tech Refresh: Funding increase due to additional SGS tech refresh requirements in FY 2026.                                                                                                                                                                                                                        |                     |               |                      |                     |               |                                                                                       |                     |               |                      |                     |               |                                                                                  |                     |               |                      |                     |               |                      |
| 5) Flyaway, Non-Recurring, MMC-S Other Procurement: FY 2025 procurement supported Next Generation Command and Control (NGC2) Project Convergence Capstone 6 (PCC6) fielding. FY 2026 funds Commercial-off-the-Shelf (COTS) hardware to enable MMC-S fielding.                                                                                                                |                     |               |                      |                     |               |                                                                                       |                     |               |                      |                     |               |                                                                                  |                     |               |                      |                     |               |                      |
| 6) Software, Recurring, PDSS: Overall funding increase in FY 2026 due to new MMC-S and MMC-T software support requirements, as well as maintaining enduring requirements.                                                                                                                                                                                                    |                     |               |                      |                     |               |                                                                                       |                     |               |                      |                     |               |                                                                                  |                     |               |                      |                     |               |                      |
| 7) Support, Fielding: Funding decrease in FY 2026 due to the completion of JBC-P fielding in FY 2025. FY 2026 costs are for the MMC efforts.                                                                                                                                                                                                                                 |                     |               |                      |                     |               |                                                                                       |                     |               |                      |                     |               |                                                                                  |                     |               |                      |                     |               |                      |
| 8) Support, Initial Spares and Repairs Parts: Funding increase in FY 2026 due to new MMC-T spares requirements.                                                                                                                                                                                                                                                              |                     |               |                      |                     |               |                                                                                       |                     |               |                      |                     |               |                                                                                  |                     |               |                      |                     |               |                      |
| 9) Support, Support and Handling Equipment: Funding increase in FY 2026 due to the addition of shipping requirements.                                                                                                                                                                                                                                                        |                     |               |                      |                     |               |                                                                                       |                     |               |                      |                     |               |                                                                                  |                     |               |                      |                     |               |                      |

Description:

The Joint Effects Targeting System (JETS) supports the Army's fires sensor strategy and is aligned with the Army's priorities in support of the National Defense Strategy. The JETS satisfies the requirement for the dismounted precision targeting sensor for the individual observer. The system provides the individual dismounted observer with an integrated, lightweight, modular capability to detect, identify, and accurately locate targets in three dimensions. The JETS also provides the capability to laser mark and designate targets for weapons platforms and transmits accurate target location coordinates to a forward entry system for engagement with precision munitions. The JETS is an Army program with joint interest with the Air Force and Marine Corps. The program will be awarding a production contract for the JETS II variant in FY 2026 which will incorporate improved targeting sensors, targeting algorithms, and a Military-Code (M-Code) GPS receivers while reducing size, weight and power requirements.

The Army Acquisition Objective (AAO) for JETS is 3,355.

**Justification:**  
FY 2026 Base procurement dollars in the amount of \$48.715 million supports the Low Rate Initial Production procurement, new equipment training and fielding for 42 Joint Effects Targeting System (JETS) II systems.

In accordance with section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110 - 181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

**Remarks:**  
FY 2026 initial/LRIP buy of JETS II systems represents a lower quantity and higher unit cost given the estimated one-time nonrecurring production costs of \$5.4M for tooling and test equipment. The program office anticipates a significant improvement in the unit cost with the FY27 procurement due to buying at an economic order quantity. The FY 2026 New Equipment Training and Fielding decrease is due to less fielding/training required for the 42 LRIP systems than the support required for the remaining fielding of the JETS I systems.

APMS SMART is the Army Portfolio Management Solution (APMS) Standard Management Asset Readiness Tool (SMART). APMS SMART is managed by PM Soldier Survivability fund center.

"A" in the Delivery Schedule indicates the Contract Award Date.

**Note:** Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand).If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

The Lightweight Handheld Mortar Ballistic Computer (LHMBC) calculates ballistic solutions that give the 60mm, 81mm and 120mm mortar weapon system user data to aim the mortar weapon and set the charge as well as serves as the Fire Direction Center for all mortar platforms. The LHMBC communicates digitally to the Fire Support Network. All LHMBC versions provide firing computations for all calibers of mortars as well as digital messaging capability. LHMBC eliminates the need of a paper firing table, improves the accuracy of mortar ballistic calculation, and increases survivability of mortar crews by digitally connecting to the Fire Support network to receive fire missions and Fire Support Coordination Measures to conduct fratricide check. The common software (SW) design and architecture will enable seamless vehicle integration. The M32A2 LHMBC utilizes the Net Warrior (NW) Mobile/Handheld (M/HH) End User Device (EUD). The common hardware (HW) and SW architecture and design will enable seamless integration to current and future Army Platforms, weapon systems and fire control systems/subsystems. The LHMBC HW and SW addresses obsolescence and will modernize mounted and dismounted mortar weapon system and fire control system.

**Justification:**  
Fiscal Year (FY) 2026 Base procurement dollars in the amount of \$6.325 million will support the procurement of 195 Lightweight Handheld Mortar Ballistic Computer (LHMBC) M32A2 systems to include hardware, as well as the continuation of required software, logistics, fielding, and production engineering efforts. The LHMBC M32A2 computer system will be used in conjunction with common software to reduce reliance on unique hardware and operating system configurations.

| Description:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                            |             |         |                                        |              |               |                                                                          |                                     |         |                 |         |             |       |
| <p>The Mortar Fire Control System (MFCS) accurately determines weapon position and orientation, navigates, calculates ballistics, and communicates digitally on the Fire Support Network. MFCS improves the accuracy of the 120mm mortar system from 138 meters Circular Error Probable (CEP) to 75 meters CEP allowing for first round fire for effect. MFCS increases survivability of mortar crews by eliminating the need for soldiers to dismount the vehicle to lay out aiming posts. MFCS also adds digital connectivity to Joint Battle Command-Platform (JBC-P). MFCS consists of the M95/M96 versions that are used on mounted 120mm Mortar systems in Armored Brigade Combat Teams (ABCTs) and Stryker Brigade Combat Teams (SBCTs), and the M150/M151 versions used on the M120A1 120mm Towed Mortar systems that are fielded throughout all Infantry Brigade Combat Teams (IBCTs). Both the M95 and M150 consist of five main components: 1) Fire Control Computer (FCC), which links the MFCS components together, communicates, and calculates the ballistic solutions; 2) Tactical Advanced Land Inertial Navigator (TALIN), which is the pointing device and position system that provides the weapon's position, pointing azimuth and elevation; 3) Gunner's Display (GD), which shows the gunner where to point the tube and displays the weapon's azimuth, elevation, and ballistic firing solution; 4) Driver's Display (DD), used with the M95 only, which provides a "steer-to" display to aid in navigation and emplacement of the vehicle; and 5) Power Distribution Assembly/Enhanced Power Distribution Assembly, which filters vehicle power and acts as a circuit breaker by isolating MFCS line replaceable units from power fluctuations and surges.</p> |                            |             |         |                                        |              |               |                                                                          |                                     |         |                 |         |             |       |
| Overseas Operations Costs (OOC) funds this requirement in FY 2026.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                            |             |         |                                        |              |               |                                                                          |                                     |         |                 |         |             |       |

| <p>Fiscal Year (FY) 2026 Base procurement dollars in the amount of \$1.879 million will support the procurement of two (2) each M95 Mortar Fire Control Systems (MFCS) and one (1) each M96 MFCS for the Armored Multipurpose Vehicles (AMPVs), including support costs for software, logistics, fielding, and production engineering. The equipment will be fielded to Armored Brigade Combat Teams (ABCTs) to support "Grow the Army" requirements.</p> <p>FY 2026 Base procurement dollars in the amount of \$1.778 million will support the procurement of one (1) each M96 MFCS for AMPVs in support of Operation Atlantic Resolve (OAR). This is a decrease of \$0.026 million from the FY 2025 requested level. These items are all critical items in support of deployed units' ongoing military operations.</p> <p>Overseas Operations Costs (OOC) funds this requirement in the amount of \$1.778 million for FY 2026 Budget Estimate. Overseas Operations Costs (OOC) are those financed with former Overseas Contingency Operations (OCO) funding.</p> |                                        |                                                                          |

Description:

The Mortar Fire Control System (MFCS) accurately determines weapon position and orientation, navigates, calculates ballistics, and communicates digitally on the Fires Support Network. The MFCS main Line Replaceable Units (LRUs) are: the Fire Control Computer (FCC), Enhanced Power Distribution Assembly (EPDA), Inertial Navigation Unit (INU), Portable Universal Battery Supply (PUBS), Gunner's Display (GD), and cable sets. Mortar Fire Control System Modifications efforts support the current MFCS mounted and dismounted variants as well as Lightweight Handheld Mortar Ballistic Computer (LHMBC) and future modernized mortar fire control systems, and enable the replacement of aging/obsolete major system components. Modification efforts include: Military-Code (M-Code) integration, lightweight weapon pointing device upgrades, transition to Modular Open Systems Architecture, transition to common mortar application software and Graphical User Interface (GUI), and implementation of software upgrades in accordance with Army Directive 2024-2 (Enabling Modern Software Development & Acquisition).

Justification:

Fiscal Year (FY) 2026 Base procurement dollars in the amount of \$3.262 million will support Mortar Fire Control Systems (MFCS) and Lightweight Handheld Mortar Ballistic Computer (LHMBC) M32A1 systems Military-Code (M-Code) integration activities, procurement of M-Code hardware for MFCS and retrofit fielded LHMBC M32A1 systems to meet military positioning, navigation, and timing (PNT) encryption signal and anti-spoofing M-Code requirements. Funding will also support the implementation of software upgrades in accordance with Army Directive 2024-2 (Enabling Modern Software Development & Acquisition).

| Description:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                            |         |         |                                        |             |               |                                                                  |                                          |         |                 |             |       |
| This funding line supports the AN/TPQ-53 Counterfire target Acquisition Radar program, a key enabler of the Army Long Range Precision Fires (LRPF) Modernization Priority. The AN/TPQ-53 is a highly mobile radar set that automatically detects, classifies, tracks, and locates the point of origin of projectiles fired from mortar, artillery, and rocket systems. It mitigates close combat radar coverage gaps by providing a 90 degree search sector (stare mode) as well as 360 degree coverage (rotating). The AN/TPQ-53 system incorporates Multi-Mission Radar (MMR) software into the system baseline, enabling air surveillance for Commander's situational awareness of UAS. The AN/TPQ-53 system interoperates with mission command systems to provide the maneuver commander increased counterfire radar flexibility, providing data to the Forward Area Air Defense Command and Control (FAAD C2) node for the sense and warn force protection capability. The AN/TPQ-53 is provided to Brigade Combat Teams (BCTs), Field Artillery Brigades (FABs) and Division Artilleries (DIVARTYs) and serves as an enabler for systems requiring target in-flight updates. |                            |         |         |                                        |             |               |                                                                  |                                          |         |                 |             |       |
| The AN/TPQ-53 Distributed Digital Receiver Exciter (DDREX) development began in Fiscal Year (FY) 2022. DDREX modernization addresses obsolescence and improves survivability in electronically contested environments. This effort builds upon Gallium Nitride (GaN), Signal Data Processor (SDP) 2.0, extended range (ER), electronic protection (EP), and secure contractor facilitization efforts. The program is upgrading to a digital architecture (hardware and software) to address emerging and evolving electronic attack threats by improving electronic protection and survivability capabilities via waveform diversity, spectrum agility, and broadening the operational bandwidth. Major development began in FY 2022, followed by developmental, live fire, and environmental qualification testing in FY 2025, with planned completion of the follow-on operational test in FY 2026. Starting in FY 2026, the program will procure DDREX kits for fielding in FY 2029.                                                                                                                                                                                            |                            |         |         |                                        |             |               |                                                                  |                                          |         |                 |             |       |

**Justification:**  
FY 2026 Modification-In-Service Procurement dollars in the amount of \$40.526 million provides Distributed Digital Receiver Exciter (DDREX) kits procurement, interim contractor support (ICS) for fielded systems, and production & fielding support.

In accordance with section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110 - 181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

| <div>Description:</div> <div>FY 2026 Modification-In-Service Procurement dollars in the amount of \$40.526 million provides DDREX kits procurement, interim contractor support (ICS) for fielded systems, and production &amp; fielding support.</div> <div>Modification #1: The Army is prioritizing procurement of DDREX kits and will begin procurement in FY 2026. This DDREX modification adheres to the system's survivability Key Performance Parameter (KPP) against peer and near-peer threats in electronic attack environments. It mitigates obsolescence of the current receiver-exciter while enabling improved counter-fire target acquisition performance and provides an architecture for a future multi-function radar (communication and electronic warfare) capability.</div> <div>Modification #2: Address Inertial Navigation Unit (INU) obsolescence. Funds support the design and integration of a replacement INU with an embedded M-Code capable global positioning system (GPS) receiver. Replacement INU will maintain system performance, reliability, and supportability in compliance with public law.</div> <div>Modification #4: Technical refresh/replacement of aging laptops; five-year cycle. Annual procurement of Remote Control Display Unit (RCDU) ruggedized laptops that interfaces with and controls the radar while meeting system environmental requirements.</div> |                            |                                                                  |         |                     |                                                                           |               |               |
| Secondary Distribution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                            | FY 2024                                                          | FY 2025 | FY 2026 Base        | FY 2026 OOC                                                               | FY 2026 Total |               |

Description:

SSN B29815 / PREDICTIVE LOGISTICS is a new start within the Army Command Post Integrated Infrastructure (CPI2) program in FY 2026

Effective with the 11 Feb 2025 Acquisition Decision Memorandum (ADM), Command Post Integrated Infrastructure (CPI2) was renamed to Command Post Modernization (CPMod).

CPI2 (hereafter referred to as CPMod) (B29801) is aligned to and supports the Army Next Generation Command Control (NGC2) initiative to modernize Command and Control (C2) systems, Infrastructure layer. This funding is to accelerate divestment of legacy equipment.

The Next Generation Command and Control (NGC2) is a top modernization priority for the U.S. Army, aimed at transforming how we communicate, coordinate, and operate across the battlefield. Command Post Modernization (CP Mod) plays a foundational role in this transformation by delivering the infrastructure that connects tactical communications, data systems, and applications into a cohesive ecosystem. CP Mod enables rapid integration of emerging technologies and modular upgrades-ensuring the Army can outpace threats remain operationally flexible in contested environments. Without CP Mod the Army cannot execute the infrastructure layer to support the NGC2 architecture.

The B29801 funding line is a strategic investment by the Army to procure tactical edge compute (TEC) and store hardware and integration efforts. Lessons learned at Project Convergence Capstone 5 (PCC5) have significantly increased the demand for On The Move (OTM) capability and distributed command and control nodes. Army recognizes a need to leverage technology enabling resilient and intuitive command posts. TEC provides the Army a distributable, common compute and store solution capable of hosting Next Generation Command and Control (NGC2) applications in a modular, configurable hardware package. TEC delivery will move Army Command and Control capabilities away from costly and complex separate "stove-piped boxes" with individual applications, reducing training and sustainment costs associated with multiple unique HW installation requirements. The use of open standards will make it simpler and more cost-effective to upgrade capabilities and/or keep pace with commercial technology by eliminating complex integration challenges and proprietary interfaces. Integration will address up to 20 unique NGC2 enabling technologies across multiple vehicle platform type/variants within Army units.

Predictive Logistics (PL) (B29815) supports the Army's Next Generation Command and Control (NGC2) initiative to modernize the Command and Control (C2) systems, Infrastructure Layer. Predictive Logistics (PL) is a logistics optimization effort that will deliver hardware/software capabilities that improve unit readiness, support commanders' abilities to monitor, predict, and sustain combat power, and enhance existing maintenance and supply processes. Establishing automated data collection from self-reporting platform sensors, PL will process, store, and disseminate Logistics Status (LOGSTAT) data to the Common Operational Pictures (COP) at platform, command, and enterprise echelons via the Unified Network. This capability will also predict future logistics needs with a focus on Class III (petroleum, oil, lubricants) and Class V (ammunition/explosives) consumables and maintenance alerts, enhancing mission planning and execution.

| <p>*Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.</p> <p>Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                       |             |                                               |                |                                          |                                                                                                         |                                          |                                          |                                          |                                          |
| <p><b>Justification:</b><br/>FY2026 Base procurement dollars in the amount of \$723.187 million supports the following efforts:</p> <p>B29801:<br/>The Next Generation Command and Control (NGC2) is a top modernization priority for the U.S. Army, aimed at transforming how we communicate, coordinate, and operate across the battlefield. Command Post Modernization (CP Mod) plays a foundational role in this transformation by delivering the infrastructure that connects tactical communications, data systems, and applications into a cohesive ecosystem. CP Mod enables rapid integration of emerging technologies and modular upgrades-ensuring the Army can outpace threats remain operationally flexible in contested environments. Without CP Mod the Army cannot execute the infrastructure layer to support the NGC2 architecture.</p> <p>FY2026 base procurement dollars in the amount of \$718.581 million procures the Army Tactical Edge Compute (TEC) hardware, conducts vehicle installation across multiple platform types/variants and includes fielding of NGC2 infrastructure for Army priority units. The NGC2 infrastructure enables the Army to leverage software applications across the tactical network at all echelons. The TEC provides a scalable compute and store solution independent of warfighting software applications. This funding enables command post modernization through modular, on-the-move tactical command post vehicles, and supports Army's intent to deliver a more mobile network and technologically enhanced capabilities to the operational force. Funds also include costs for logistics, and contractor and matrix personnel directly in support of the mission.</p> <p>Predictive Logistics (PL) (B29815):<br/>FY2026 base procurement dollars in the amount of \$4.606 million will provide funding for platform engineering, integration, and assessments of Predictive Logistics hardware and software solutions. Funds have been consolidated in this line to support hardware and software procurement, integration and engineering for vehicle platform programs that have developed platform-specific LOGSTAT data collection solutions. Funds will also support program management support for PL.</p> |                                       |             |                                               |                |                                          |                                                                                                         |                                          |                                          |                                          |                                          |

**Remarks:**  
1. Installation Assembly Test & Checkout (IATC) increase driven by quantity of NGC2 vehicle platforms to be integrated and the associated A-Kit procurement.  
2. Tactical Edge Compute and Store hardware unit cost for hardware and base software; independent of NGC2 software applications.  
3. Quantity of hardware includes 300 per Division and 838 for divestiture of legacy Army equipment.  
4. New Equipment Training/New Equipment Fielding increase is driven by the cost to support NGC2 infrastructure modernization to Army priority units.  
5. Log Support increase is driven by the cost to support and field NGC2 infrastructure modernization to multiple Army priority units.  
6. PMO increase aligns with personnel required to support execution of the NGC2 infrastructure modernization to multiple Army priority units.

"A" in the Delivery Schedule indicates the Contract Award Date.

**Note:** Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand).If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

| Gross/Weapon System Unit Cost (\$ in Thousands)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | -           | -       | -       | -                                      | -           | -             | -                                                                    | -                                                  | -       | -               | -           | -     |
| Description:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |             |         |         |                                        |             |               |                                                                      |                                                    |         |                 |             |       |
| <p>This funding line supports the Army's Next Generation Command and Control (NGC2) initiative to modernize Command and Control (C2) systems and directly aligns to the Army Long Range Precision Fires (LRPF) modernization priorities. Fire support is the effect of lethal and non-lethal weapons (fires) that directly support land, maritime, amphibious and special operations forces who engage enemy forces, combat formations and facilities in pursuit of tactical and operational objectives. Fire Support Command and Control (FSC2) systems automate the planning and execution of fire support operations, so appropriate munitions are paired with suitable weapons or group of weapons to adequately cover targets.</p> <p>All three FSC2 programs under this funding line are software only programs executing under Continuous Integration/Continuous Delivery (CI/CD) approach to software development and capability deployment. The CI/CD approach enables incremental capability deliveries to add to value and meet Warfighter needs.</p> <p>B28511 - Joint Targeting Integrated Command and Coordination Suite (JTIC2S) software will provide critical fires/targeting capability for Joint and organic Army fire support management and a Joint fires/targeting common operational picture (COP) for Joint and Coalition partners, as well as at echelon for target development. JTIC2S will replace the fielded legacy Joint Automated Deep Operations Coordination System (JADOCS), which is approaching end of useful life and is facing obsolescence issues due to outdated software architecture and code. It will enable commanders to functionally integrate targeting efforts in a federated method. JTIC2S users at echelon will utilize the functions within the software for a synchronized targeting tactical picture with Army and Joint Fires COP to support Joint All Domain Command and Control and Multi Domain Operations (MDO) against a near-peer adversary. JTIC2S development efforts began in FY2024 and provides leave behind working software for select units at Division and above for DEVSECOPS and soldier feedback to shape design and functionality.</p> <p>B28620 - Advanced Field Artillery Tactical Data System (AFATDS) provides the Army and Marine Corps automated fire support command, control and communications and supports Hypersonic and LRPF capabilities by 1) serving as the key sensor-to-shooter link for the Army and Marine Corps; and 2) providing fully automated support for planning, coordinating, controlling and executing fires and effects. The LRPF capabilities include Extended Range Guided Multiple Launch Rocket System (ER-GMLRS), Precision Strike Missile System (PrSM), Joint Targeting support to MDO, and emerging sensor-to-shooter initiatives. AFATDS is used to plan, execute, and deliver lethal and non-lethal effects and provides Joint/Coalition Situational Awareness for fires execution and mission management. The system interoperates and integrates with over 80 different battlefield systems, including Navy and Air Force command and control weapons systems. As a member of the Artillery System Cooperation Agreement (ASCA), AFATDS is interoperable with 17 coalition partner nation fire support C2 systems. The program is currently fielding the AFATDS 6.8 baseline, which automates the planning, coordination, and control of all fire support assets (field artillery, mortars, close air support, naval gunfire, attack helicopters, offensive electronic warfare, fire support meteorological systems, forward observers, and fire support radars). AFATDS modernization efforts are executed under the auspices of Artillery Execution Suites (AXS) utilizing a data centric model postured for deployment to a variety of hosting environments (e.g., cloud, laptop, tables, server), setting</p> |             |         |         |                                        |             |               |                                                                      |                                                    |         |                 |             |       |

| <p>conditions for C2 application strategy implementation. AXS software development provides leave behind working software to select units at multiple echelons for DEVSECOPS and soldier feedback shaping software design and functionality.</p> <p>BZ9851 - Precision Fires-Dismounted/Mounted (PF-D/M) provides the dismounted and mounted Forward Observer (FO) and Fire Support Teams (FISTs) the ability to execute fire missions. PF-D is a software application operating on the Nett Warrior End User Device (EUD) that provides the dismounted FO and FISTs the ability and functionality to locate ground targets accurately and rapidly process a Call for Fires, which is the act of requesting a fire mission against the identified ground target. PF-D answers the Mobile/Handheld Computing Environment requirement that all handheld applications reside on the Nett Warrior EUD. PF-M replaces the Lightweight Forward Entry Device's (LFED) Forward Observer Software (FOS) at the maneuver company FIST, allowing them to identify ground targets and request fire missions. PF-M answers the Mounted Computing Environment (MCE) requirement to reside on the Mounted Family of Computing Systems (MFoCS).</p> |                                   |                |                                               |                     |                    |                                                                             |                        |                |                |                |

**Justification:**  
FY 2026 Base procurement dollars in the amount of \$3.389 million supports the following efforts:

B28511 JTIC2S base procurement funding in FY 2026 and beyond was realigned to Line BA9301 Network Management Initialization and Services, Item Number B99418 Unified Network Operations, in support of the Army's Next Generation Command and Control (NGC2) initiative to modernize Command and Control (C2) systems. This capability, along with its resources and requirement will transition under the overarching NGC2 capability to eliminate stove-piping, reduce duplication of effort, and provide capability within a single NGC2 core architecture

B28620 AFATDS base procurement funding in FY 2026 and beyond was realigned to Line BA9301 Network Management Initialization and Services, Item Number B99418 Unified Network Operations, in support of the Army's NGC2 initiative to modernize C2 systems. This capability, along with its resources and requirement will transition under the overarching NGC2 capability to eliminate stove-piping, reduce duplication of effort, and provide capability within a single NGC2 core architecture

BZ9851 FY 2026 Base procurement dollars in the amount of \$3.389 million will procure PF-D/M ancillary equipment/hardware (consisting of modems, cables and hubs) in support of PF-D/M fielding/training, and Contractor/Matrix PMO support. This funding enables the Army's NGC2 initiative to modernize C2 systems.

In accordance with section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110 - 181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

| Gross/Weapon System Unit Cost ( <i>\$ in Thousands</i> )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 32,834.816                 | 4,592.800      | 390.298        | 131.884                                       | -                  | 131.884              | -                                                                                             | -                                               | -              | -                      | -                  | -            |
| <p><b>Description:</b><br/> This funding line supports the Air and Missile Defense, Army Modernization Priorities.</p> <p>The Air Missile Defense Planning and Control System (AMDPCS) provides integration of air and missile defense operations at all echelons. AMDPCS is comprised of the following major subsystems: Air Missile Defense Work Station (AMDWS) ensures updated interfaces for interoperability between Air Defense and the rest of the force, allowing the Commander the visibility and situational understanding of the airspace; other tools in AMDWS affords Soldiers horizontal and vertical collaborative planning with adjacent units. Common Data Link Interface-Module (CDLI-M) serves as a joint tactical data-link gateway/air picture. Forward Area Air Defense (FAAD), correlates the joint and local air picture and when displayed on AMDWS, provides a near real time, three-dimensional air picture for the Commander. Joint Tactical Terminal (JTT) provides Soldiers Theater Ballistic Missile (TBM) early warning allowing them to take appropriate actions. AMDPCS are currently fielded to Army Air and Missile Defense Commands (AAMDC), Air Defense Artillery Brigades, (ADA BDE), Air and Missile Defense Battalions (AMD BN) and Terminal High Altitude Area Defense Batteries (THAAD BTRY). Air Defense Airspace Management (ADAM), a variant of AMDPCS, are fielded to Corps, Divisions, Brigade Combat Teams (BCTs) and multi-functional support brigades. As part of the capability and technology reuse, AMDWS external interfaces are being leveraged by Integrated Battle Command System (IBCS) to avoid redevelopment of existing capabilities. AMDWS and FAAD are core components of the Air and Missile Defense system-of-systems currently deployed in combat zones.</p> <p>The Approved Acquisition Objective (AAO) for AMDPCS shelter systems is 503. FY 2026 Base procurement dollars support Maneuver Short Range Air Defense (M-SHORAD) Battalions and Grow the Army (GTA) requirements.</p> |                            |                |                |                                               |                    |                      |                                                                                               |                                                 |                |                        |                    |              |

**Justification:**  
FY 2026 Base procurement dollars in the amount of \$33.103 million procures the following AMDPCS shelters: one (1) AMDPCS-B shelter system, two (2) Air Battle Management Operations Centers (ABMOCs) shelters, and one (1) Sensor C2 Node shelter for Army National Guard M-SHORAD Battalions. Base dollars also procure net ready hardware for five (5) AMDPCS-A & B shelter systems, fourteen (14) ADAM shelters in conjunction with Engineering Change Proposals (ECPs) and Modification Work Orders (MWOs), and 228 AMDPCS workstations and associated software and support (AMDWS, FAAD and CDLI-M) for AMDPCS shelter systems. Finally, these procurement dollars include program management, shipping/fielding costs, and New Equipment Training (NET).

In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing the military support to civil authorities.

Decrease from FY 2025 to FY 2026 reflects a reduction in AMDPCS shelter procurement quantity.

| Remarks:<br>System Integration/Hardware FY 2025 to FY 2026 unit cost increase reflects a reduction in AMDPCS shelter procurement quantity and a different AMDPCS shelter LIN/configuration.<br><br>AMDPCS Workstations quantities vary with the multiple shelter LINs/configurations (AMDPCS-A, AMDPCS-B, ADAM Cell, ABMOC, Battery CP, and Sensor C2 Node), each has a different unit cost, which results in fluctuation of unit cost by year, based on the quantities procured in support of Army fielding requirements. |                     |               |                      |                     |               |                                                                                        |                     |               |                      |                     |               |                                                                                   |                     |               |                      |                     |               |                      |

**Remarks:**  
The Air and Missile Defense Planning and Control System (AMDPCS) is a COTS program. COTS and Government Furnished Equipment (GFE) are integrated by the contractor.

Quantities reflect six (6) shelter types/LINs (AMDPCS-A, AMDPCS-B, ADAM Cell, ABMOC, Battery CP, and Sensor C2 Node), each with a different unit cost. This results in fluctuation of unit cost by year, based on the quantities procured in support of Army fielding requirements. System Integration/Hardware cost also includes equipment obsolescence mitigation.

| Gross/Weapon System Unit Cost ( <i>\$ in Thousands</i> )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 44,248.120                 | 23,264.222     | 43,485.375     | 15,613.714                                    | -                  | 15,613.714           | -                                                                               | -                                                         | -              | -                      | -                  | -            |
| <b>Description:</b><br>This funding line is directly aligned to the U.S. Army Air and Missile Defense (AMD) Modernization Priority.<br><br>The Army Integrated Air and Missile Defense (AIAMD) program is a direct response to the U.S. Army AMD Concept and Operational and Organizational (O&O) Plan for the Future Force, the AIAMD System of Systems (SoS) Capabilities Development Document (CDD), and the AMD Task Force Concept of Operations (CONOPS). The AIAMD Program is uniquely structured to enable the development of an overarching system of systems (SoS) capability with all participating Air Defense Artillery (ADA) components functioning interdependently to provide total operational capabilities not achievable by the individual element systems. The AIAMD program achieves this objective by establishing the AIAMD architecture and developing (1) the IAMD Battle Command Systems (IBCS) Engagement Operations Center (EOC) that provides the common Mission Command capability, (2) the Integrated Fire Control Network (IFCN) Relay capability for fire control connectivity and distributed operations, and (3) the common Plug and Fight (P&F) Kits that network enable multiple sensor components, weapon components, and the IBCS EOC.<br><br>The AIAMD Program will provide advanced capabilities to the Army and the soldier by allowing transformation to a network-centric system-of-systems capability (also referred to as "Plug and Fight") that integrates Army AMD sensors and weapons with the IBCS EOC. The AIAMD SoS architecture will enable extended range and non-line-of-sight engagements to include joint kill chain engagements across the full spectrum of aerial threats, providing fire control quality data to the most appropriate weapon to complete the mission successfully. Further, it will mitigate the coverage gaps and the single points of failure that have affected AMD defense design in the past. The AIAMD program will provide the user with the ability to train on a single IBCS that will result in overall training savings. The AIAMD program will also provide the Army with the ability to procure components that will build to established Integrated Fire Control interfaces alleviating the cost of procuring total system capabilities in the future.<br><br>AIAMD will be delivered through the fielding of the IBCS-based AIAMD architecture, including the IBCS EOC, IFCN Relay, Sentinel A3, and Patriot components connected via an IFCN, working in an integrated manner. The government controlled open architecture enables integration of future capabilities to meet emerging threats and fielding to Enduring Indirect Fire Protection Capability (IFPC), Air Defense Airspace Management (ADAM) Cells, ADA Brigade, Army Air and Missile Defense Command Headquarters (AAMDC), and Terminal High Altitude Area Defense (THAAD). |                            |                |                |                                               |                    |                      |                                                                                 |                                                           |                |                        |                    |              |

**Justification:**  
FY 2026 base procurement dollars in the amount of \$546.480 million will procure hardware to convert:  
Two (2) PATRIOT Battalions to IBCS Enabled Battalions (12 Engagement Operation Centers (EOC) and 24 Integrated Fire Control Network (IFCN) Relays)  
One (1) Indirect Fire Protection Capability (IFPC) Battalion (14 EOCs and 9 IFCN Relays)  
One (1) Terminal High Altitude Area Defense (THAAD) Battery (1 EOC)  
One (1) AAMDC (3 EOCs, 3 IFCN Relays)  
One (1) ADA BDEs (2 EOCs and 3 IFCN Relays)  
Two (2) Trainer (2 EOC).  
Funds also procure Plug and Fight Items, Prime Movers, Government Furnished Equipment, such as radios and Global Position System equipment, and initial spares.

In accordance with section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110 - 181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

| In FY 2026 total costs include the production and integration of IAMD Battle Command System (IBCS) Engagement Operation Centers (EOC) and Integrated Fire Control Network (IFCN) Relays, procurement of Contractor Furnished Equipment (CFE) and Government Furnished Equipment (GFE) required for integration, Component Major Item (CMI), associated costs of changes driven by commercial-off-the-shelf (COTS) hardware availability, commercial-off-the-shelf (COTS) software, software license costs associated with delivery of Major End Items (MEIs), production facilities, initial spares, interim contractor support, logistics support, Systems Engineering, Program Management, and Plug and Fight Items to network enable multiple sensor and weapon components with IBCS. |                     |               |                      |                     |               |                                                                          |                     |               |                      |                     |               |                                                                     |                     |               |                      |                     |               |                      |
| In FY 2026, Prime Mover cost is reflected in the Government Furnished Equipment (GFE) Cost Element rather than the Component Major Item (CMI) cost element. The Army has formally decided the Program Management Office is responsible for procuring the M1085A2 trucks and other GFE to support production of the IAMD Battle Command System Major End Items. Likewise, GFE also includes Plug and Fight items starting in FY 2026.                                                                                                                                                                                                                                                                                                                                                     |                     |               |                      |                     |               |                                                                          |                     |               |                      |                     |               |                                                                     |                     |               |                      |                     |               |                      |
| In FY 2025, the Interim Contractor Support Cost Element increased due to accelerated fielding activities per guidance of Chief of Staff Army as well as Transformation in Contact (TiC) efforts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                     |               |                      |                     |               |                                                                          |                     |               |                      |                     |               |                                                                     |                     |               |                      |                     |               |                      |
| Systems engineering covers a wide range of engineering to include ECPs. It is a cost estimating factor based on production maturity as well as units produced.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                     |               |                      |                     |               |                                                                          |                     |               |                      |                     |               |                                                                     |                     |               |                      |                     |               |                      |
| Prior Years, FY 2025 and FY 2026 quantities are incorrect on the P-40 due to COMPO. Correct quantities are below as well as on the P-5 breakout.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                     |               |                      |                     |               |                                                                          |                     |               |                      |                     |               |                                                                     |                     |               |                      |                     |               |                      |

**Remarks:**  
The program office works closely with the OEM to mitigate production line gaps. Gaps in production between FY23 deliveries and FY24 deliveries is a result of the OEM moving to a new production facility. Once production resumes in FY26, gaps noted in FY27/28 are anticipated to be filled by other customers and not represented in this P-Form.

"A" in the Delivery Schedule indicates the Contract Award Date.

**Note:** Due to space limitations, quantities in the Exhibit P-21 delivery calendar are truncated and rounded based on the maximum quantity in the calendar as follows. If the maximum quantity is less than or equal to than 9,999, all quantities are shown as each. If the maximum quantity is between 10,000 and 999,999 all quantities are shown in thousands. If the maximum quantity is between 1,000,000 and 999,999,999 all quantities are shown in millions (rounded to the nearest thousand).If the maximum quantity is equal or greater than 1,000,000,000 all quantities are shown in billions (rounded to the nearest million).

Description:

This funding line is directly aligned to the U.S. Army Air and Missile Defense (AMD) Modernization Priority. The Army Integrated Air and Missile Defense (AIAMD) program is a designated Major Defense Acquisition Program (MDAP), a critical component of the Army's AMD strategy, and is a top AMD Cross Functional Team modernization priority program.

AIAMD is directly aligned to the U.S. Army Air and Missile Defense (AMD) Modernization Priority. The AIAMD program is a direct response to the U.S. Army AMD Concept and Operational and Organizational (O&O) Plan for the Future Force, the AIAMD System of Systems (SoS) Capabilities Development Document (CDD) and the AMD Task Force Concept of Operations (CONOPS) and a top Cross Functional Team Priority. The AIAMD Program is uniquely structured to enable the development of an overarching SoS capability with all participating Department of Defense (DoD) Air Defense Artillery (ADA) components functioning interdependently to provide total operational capabilities not achievable by the individual element systems. This funding will optimize effort to modernize air defense systems under an Integrated Fires architecture to manage and defend the battlespace in a joint environment against complex threats using the Integrated Battle Command System (IBCS) as the centerpiece. As more sensors and interceptors are integrated with IBCS per the 1-N list, the Army's integrated air and missile defense system will multiply its effectiveness by leveraging the best sensors and best interceptors to engage threats.

This funding line provides for procurement of the RIG-360 component to include Government Furnished Equipment that provides uplinker capability for both the PAC 3/MSE and IFPC family of interceptors.

Remote Interceptor Guidance 360 (RIG-360) is a software-defined, X-band missile communications device that provides full hemispherical, 360-degree in-flight communications with IAMD Composite Task Force interceptors including the PATRIOT Advanced Capability 3 (PAC-3) family of interceptors. The RIG-360 adds capability to the AIAMD architecture by unlocking the full kinematic potential of the PAC-3 family of interceptors providing full 360-degree coverage against attacking non-ballistic threats. The system expands the Warfighter's area of control and increases AMD effectiveness. RIG's 360-degree engagement capability leverages sensors integrated within the IBCS architecture and integrates an interceptor datalink device as a network component. Integration of an independent, adapted IFPC Uplinker into IBCS will support PAC-3/MSE and IPFC Family of Interceptor engagements and advances IAMD goals of pairing any sensor with best shooter.

| The quantities on the P-40 are not correct. The funding requested in FY26 supports the Government Furnished Equipment required to support the Army End Item Interchange policy requirement for Component Major Item. The GFE consists of Prime Movers and Generators of varying unit costs. |  |                            |               |                      |                     |               |                                                                                        |                     |               |                      |                     |               |                                                   |                     |               |                      |                     |               |                      |  |  |

| Gross/Weapon System Unit Cost ( <i>\$ in Thousands</i> )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | -                                 | -              | -              | -                                             | -                  | -                    | -                                                                                       | -                                          | -              | -                      | -                  | -            |
| <b>Description:</b><br>The CECOM Software Engineering Center (SEC) provides depot maintenance for weapon system specific Post Production Software Support (PPSS) supporting Intelligence, Force Protection, Electronic Warfare, Aviation, Mission Command, Tactical Radio, Tactical Network, Transport, Counter Fire Radar, and Satellite Communications programs. It supports readiness of Army network systems, mission command capabilities and intelligence and sensor systems. Policy for PPSS requires that system managers provide initial host capabilities for new systems and that the Life Cycle Management Centers (LCMCs) provide upgrades and replacement of obsolete equipment. Significant portions of host and network equipment are no longer economically repairable and/or are reaching obsolescence. There is a requirement to respond to emergency requests from the field for Software Engineering support, in order to maintain operational readiness of deployed weapon systems. With host computers and peripherals having a life span of approximately five years and SEC performing its mission over a continuous period of time beyond five years, equipment and labs must be replaced and/or upgraded regularly to deal with obsolescence and take advantage of the continual improvements in technology that are indigenous to high-technology based weapon systems and their software support environments. SEC must purchase these items to meet systems' mission requirements. SEC must also develop Continuity of Operations (COOP) sites in order to reduce risk of a catastrophic failure at the primary location. These sites will restore data and the software development environment, allowing SEC to maintain critical software updates, accreditation, and IV&V. Major equipment purchases include servers and server storage. CECOM SEC also is also continuing development on its Software Engineering Environment (SE2), which will support Continuous Integration/Continuous Delivery (CI/CD) and Army software modernization for weapon. |                                   |                |                |                                               |                    |                      |                                                                                         |                                            |                |                        |                    |              |

**Justification:**

FY 2026 Base procurement dollars in the amount of \$5.175M supports maintaining software capabilities in labs such as:

1. ISD OPA Lab Purchases: Lab requirements to maintain UCRN/SCRN for all of ISD includes the purchase 5 Dell R650s to replace degraded XR2x that are currently in use. Also includes the purchase of a customized storage to prevent future critical hard drive failures.
2. ICS OPA - APR39EV2 B-Kit - APR-39EV2 B-Kit [ (1) - Processor, (4) - Receivers, (5) - Antennas, (1) - Control Unit, (1) - Display Unit, and (1) - Interconnection Wiring Harness. Support the ARAT PPSS mission by developing Mission Software (MS) to Force Protection Systems (FPS). This addition will enable the existing ARAT developers the ability to produce more MS necessary to meet added sustainment requirements.
3. Test Infrastructure - Simulators - Software Defined Radios (SDRs): Software Defined Radios (SDR) will add increased capability and support to the ARAT PPSS mission by simulating threats and background emissions of the environment in which Force Protection Systems (FPS) operate. This added capability will enable the existing ARAT simulators the ability to produce a signal environment necessary to meet added sustainment requirements.
4. IEWS Infrastructure: To comply with Army's directives and implement a continuous iteration / continuous deployment (CI/CD) architecture and simultaneously update our existing infrastructure in support of a Zero Trust Architecture (ZTA). OPA funds will be used for the purchase and implementation of new network devices including firewalls, routers, intrusion detection systems. These will be used to create a new pipeline allowing IEWSD to deliver software directly to the field. Additionally, we will introduce new devices to support identity and authentication requirements in support of ZTA.
5. On-Premises Large Language Model (LLM) Development Environment: Infrastructure Solution to provide adequate server and data processing power and storage to support the adoption of on-premises Large Language Model (LLM) testing, refinement, and deployment to the SEC workforce.
6. SE2-Classified Phase II: Infrastructure Solution to add additional capability to the SEC SE2 -Classified that will enhance capability and support tactical systems in their CI/CD efforts.
7. SE2 DREN to Admin Phase III: Infrastructure Solution to allow for Software SE2 to be available in SEC work areas outside of the labs reducing the need to operate within limited lab space. Solution will also help transform current conference rooms to multi-function huddle rooms for enhanced onsite collaboration.
8. SE2 Hybrid Cloud Phase IV: Infrastructure Solution to provide additional on-premises/cloud capability to support SE2 in a Hybrid cloud environment. Solution will add additional capability, widen secure access and reduce costs by reducing the need to procure and maintain separate computers for developers.

**Description:**

This funding supports the Army's Next Generation Command Control (NGC2) initiative to modernize the Command and Control (C2) systems Infrastructure Layer to secure battlefield superiority. NGC2 is one of the Army's highest modernization priorities and will enhance the Army's ability to conduct multi-domain operations by integrating advanced technologies, improving interoperability, and increasing the speed and accuracy of decision-making processes.

The Network Management Initialization and Services (NMIS) program supports the Army's objective of an integrated Network Operations capability. There are four components to the program:

Joint Network Management System (JNMS), B99318, this specific funding supports Joint and Next Generation Command and Control (NGC2) initiatives to modernize Command and Control (C2) systems. The JNMS project provides training and logistics activities for Joint Enterprise Network Manager (JENM) / Joint Network Management Software planning applications and radio planner prototyping efforts, which provide Lower Tactical Tier Network planning, configuration, monitoring and troubleshooting and other Army Capability Manager (ACM) approved applications supporting the Unified Network (UN) and its emerging requirements. JNMS funding provides critical support to all Army warfighting functions Division/Brigade Combat Teams (BCTs), U.S. Army support elements, ITN experimental units, and Security Forces Assistance Brigades (SFABs).

Network Management Systems (NMS), BA9312: FY 2025 and beyond Base dollars have been realigned to Networked Radio Planners BU8100 / B98112 funding line.

Unified Network Operations (UNO), B99418:

This project supports the Army's NGC2 Infrastructure Layer by providing the infrastructure, services and support critical to establishing a unified, network-centric battlefield that empowers commanders with unprecedented situational awareness and control, enabling rapid planning, resource allocation, and execution through robust applications, infrastructure, and resilient communication networks. The Army's NGC2 initiative fundamentally transforms Army operations by moving beyond isolated systems to integrate all warfighting functions - Command and Control (C2), Information Advantage, Movement and Maneuver, Intelligence, Fires, Protection, Sustainment, and Network Operations (NetOps) - into a cohesive ecosystem.

This integrated approach empowers commanders with unprecedented situational awareness and control, enabling rapid planning, resource allocation, and execution through robust applications, infrastructure, and resilient communication networks. Built upon a Zero Trust Architecture, NGC2 will continuously verify all users and devices before granting access to resources, minimizing the impact of potential breaches, and ensuring data integrity across the NGC2 environment.

| Data Products, BA9315:<br>This project supports the NGC2 Infrastructure Layer. Data Products are a critical component in enabling the following 5 capabilities: (1) a converged Mission Command Network that operates seamlessly worldwide in any environment; (2) end-to-end network centric connectivity and interoperability across the Mission Command Network by enforcing and implementing standards-based technologies and providing the device configuration instructions required by digital systems to communicate with each other; (3) the integration of disparate networks/systems capabilities across multiple domains and environments; (4) network resiliency through path diversity and dynamic routing to ensure tactical units can communicate in hostile environments; (5) the planning and initialization of combat systems which enable and/or enhance capabilities such as Command and Control, Common Operational Picture, Long Range Precision Fires, Next Generation Combat Vehicles, Future Vertical Lift, Army Network, Air and Missile Defense, and Soldier Lethality. AAO is N/A. |                            |         |                                        |                 |                                                                                              |                                     |                 |         |         |         |

**Justification:**  
FY 2026 funding in the amount of \$244.403 million represents Army funding prioritization and consolidation to support the Next Generation Command and Control (NGC2) initiative to modernize command and control (C2) systems. Base procurement dollars supports the following NGC2 Infrastructure Layer efforts:

Joint Network Management Systems (JNMS), B99318:  
FY 2026 Base dollars in the amount of \$1.967 million funds Field Support Engineering (FSE) personnel training and logistics to support Soldiers' ability to plan, configure, monitor, manage, and sustain the radio network. JNMS will utilize Network Management Reference Implementation Laboratory (NM RIL) for help desk support, software updates, and software integration onto the deployed hardware platform.

Network Management Systems (NMS), BA9312:  
FY 2025 and beyond Base dollars have been realigned to Networked Radio Planners BU8100 / B98112 funding line.

Unified Network Operations (UNO), B99418:  
FY 2026 Base dollars in the amount of \$233.345 million provides soldiers with Army's NGC2 Infrastructure Layer, which deploys, enables and supports critical warfighting functions and network operations capabilities (developed under PE 0604818A / Army Tactical Command & Control Hardware & Software, Project EJ6 and EK9). Includes C2 Infrastructure Program Management / Systems Engineering, C2 Infrastructure Component Hardware, Software Licensing and Support, Software Deployment Platform and Support, and Post Deployment Software Sustainment (PDSS).

The NGC2 Infrastructure Layer capabilities will minimize reliance on manual intervention, high-signature infrastructure, and wired connections, maximizing relative decision advantage through a streamlined, low-infrastructure network that delivers crucial information tailored to operational requirements and empowers commanders to right-size data use and accelerate decision-making at all echelons.

Data Products, BA9315:  
FY 2026 Base dollars in the amount of \$9.091 million provides government support services, and contractor support services to conduct the activities required to create Data Products in support of the entire Mission Command Network, across multiple software versions, to include current baselines, baselines in sustainment, and emerging or future baselines. Data Products are a vital element to achieve multiple objectives within the Army by enabling Command and Control (C2) capabilities in support of Army 2030/2040 initiatives, Network modernization and experimentation, and the 2024 Army Force Structure Transformation Initiative. Data Products are created in accordance with HQ DA G3/5/7 priorities, stakeholder requirements, and other top Army priorities for deployment, training, and reset. Additionally, Data Products dollars also fund continual modernization of Automated Initialization Manager (AIM) and Initialization Tool Suite (ITS) to integrate new or emerging requirements and capabilities, update training, and provide technical support of the entire Data Product portfolio. AIM is the tool utilized to create and manage Data Products while the ITS capability allows Soldiers the necessary flexibility to customize the Data Product to meet Commander's intent or mission requirements. Historical trends show growth in Data Product requirements, complexity, and quantity as the Mission Command Network continues to evolve. Data

| <p>- UNO Lower-Tier Tactical (LTT) SW Licensing and Support, UNO Upper-Tier Tactical (UTT) SW Licensing and Support, and UNO Tactical ICAM (T-ICAM) SW Licensing and Support combined and renamed C2 Infrastructure SW Licensing and Support</p> <p>- Multi-Factor Authentication Hardware - Token renamed C2 Infrastructure Component HW</p> <p>- Software Deployment and Help Desk Support cost elements combined and renamed C2 Infrastructure Software Deployment Platform and Support</p> <p>FY26 C2 Infrastructure Program Management/Systems Engineering funds provide for program management office (PMO) activities and systems engineering support to ensure NGC2 Infrastructure Layer maintains cost, schedule, and performance parameters. FY26 cost increase represents Army funding prioritization and realignment in support of the NGC2 Infrastructure Layer and reflects expanded system complexity, new compliance and capability requirements, and elevated integration and risk management demands necessitating greater technical oversight and coordination.</p> <p>FY26 C2 Infrastructure Component HW funds provide for the procurement of HW components that are not currently procured by other programs/other funding lines and where NGC2 SW has a requirement to be hosted. This includes the procurement of cloud services, tokens, and ancillary equipment. FY26 HW quantities support SW integration and will not be reflected in the COMPO Quantities on the P-40. FY26 cost increase is due to accelerating capability deployment to prioritized units across echelons at speed and scale to the Warfighter.</p> <p>FY26 C2 Infrastructure SW Licensing and Support funds provide for the procurement of SW licenses and support for NGC2 Infrastructure Layer users across echelons. FY26 cost increase represents Army funding prioritization and realignment in support of the NGC2 Infrastructure Layer and reflects acceleration of capability deployment to prioritized units across echelons at speed and scale to the Warfighter, integration with additional systems, and the need for enhanced cybersecurity, verification, and compliance with updated SW development standards.</p> <p>FY26 C2 Infrastructure Software Deployment Platform and Support funds provide for the procurement of SW deployment platform and support, technical data, and help desk support. FY26 cost increase represents Army funding prioritization and realignment in support of the NGC2 Infrastructure Layer and reflects expanded supportability requirements and deployment planning to ensure reliable and timely field support.</p> <p>FY26 C2 Infrastructure PDSS funds provide for critical SW support activities that occur after the deployment of the system that enables the continual operations and deployment of updated SW through the mitigation of Cyber vulnerabilities and integration and configuration management of improvements into releasable builds. FY26 cost increase represents Army funding prioritization and realignment in support of the NGC2 Infrastructure Layer and reflects requirements for ongoing updates, cybersecurity patching, performance monitoring, and user support to ensure sustained system effectiveness and compliance throughout the SW lifecycle.</p> |                                   |                                                                                                     |                |                     |                    |                      |

Description:

GCSS-Army gives combat forces a decisive edge by providing Soldiers a seamless flow of timely, accurate, accessible, and secure logistics information to get combat power to the right place, at the right time. The GCSS-Army program is an information and communications technology investment that provides key enabling support to the transformation of the Army into a network-centric, knowledge-based future force. The GCSS-Army approved Capability Development Document (CDD) and Capability Production Document (CPD) require an enterprise approach to replace current logistics and maintenance Standard Army Management Information Systems (STAMIS) to include Supply, Maintenance, Ammunition, Aviation, and Property Book. GCSS-Army implements best business practices to streamline Supply, Accountability, Maintenance, Distribution, and Reporting procedures in support of the future force transition path of The Army Campaign Plan. In addition, The Army requires a disconnected operations architecture for GCSS-Army to support disconnected supply, ground maintenance, and accountability.

GCSS-Army does not have an OPA funding request in FY 2026

| Description:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                            |             |         |                                        |              |               |                                                                                                 |                                          |         |                 |         |             |       |
| The Integrated Personnel and Pay System-Army Increment II (IPPS-A Inc II) provides an integrated, multi-Component, personnel and pay system that streamlines existing Human Resources (HR) systems and processes by enhancing efficiency and accuracy of personnel and pay procedures in support of 1.1 million Soldiers. This program is an essential building block to reform the Department of the Army towards achieving greater performance and affordability in support of the National Defense Strategy and the Congressional audit mandate.                                                                                                                                                                                                   |                            |             |         |                                        |              |               |                                                                                                 |                                          |         |                 |         |             |       |
| The IPPS-A program to date has completed a phased deployment of Military Human Resource and talent management capabilities across all Army components (Active, Guard and Reserve). This includes all Army National Guard units in the 54 states and territories into one single solution. The program has subsumed 120 systems/instances and six partial capabilities bringing the Army's total military force into a single HR authoritative system.                                                                                                                                                                                                                                                                                                 |                            |             |         |                                        |              |               |                                                                                                 |                                          |         |                 |         |             |       |
| In accordance with the Acquisition Strategy approved by the Army Acquisition Executive on 21 June 2022, the program office will incrementally release Army Military Payroll, additional Human Resource (HR) Capabilities (e.g., Archiving, Talent and Strength Management, and Audit), and HR Enhancements to the deployed baseline. In 4QFY24, IPPS-A began migration from the legacy infrastructure hosting solution with Defense Information Systems Agency (DISA) to a Cloud Hosting solution. In 1QFY25, the program will award System Integrator Services (SIS) bridge contract to enable competition for the new Capability Support contract in FY26 that provides maintenance and system enhancements enabling subsumption of legacy systems. |                            |             |         |                                        |              |               |                                                                                                 |                                          |         |                 |         |             |       |

Description:

In accordance with section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110 - 181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

Funds are used to modernize the following core Engineer capabilities to support Homeland defense missions, domestic emergency responses, and providing military support to civil authorities:

INSTRUMENT SET RECONNAISSANCE AND SURVEY (Common name ENFIRE): ENFIRE executes reconnaissance, route clearance, obstacle reporting, construction management, survey support, terrain analysis and management. Commercial Off The Shelf (COTS) capabilities are leveraged to capture, process and disseminate data through SIPR / NIPR Blue Force Tracker 2 (BFT2) Transceiver, Harris and other Tactical Radios that are organic to gaining units. ENFIRE is interoperable with Army Mission Command and USMC C2PC. This capability supports soldier Lethality by assessment of Environmental, Terrain and Infrastructure features. ENFIRE delivers reconnaissance and engineering capabilities that are accurate, interoperable and flexible. Tasks previously accomplished using analog methods have been automated reducing time on target and most can be conducted from a discrete stand-off position. The COTS baseline supports rapid modernization by adoption and integration. ENFIRE Army Acquisition Objective (AAO): 2883

GLOBAL POSITIONING SYSTEM - SURVEY (GPS-S): GPSS is a survey system capable of using military and commercial GPS satellite signals to perform precise static, kinematic, real-time- kinematic (RTK) surveys for geodetic control, construction, topographic and hydrographic survey. The GPS-S is used for independent navigation, Local Area Differential GPS (LADGPS) and precise point positioning. This capability supports Soldier Lethality by applying sub-meter and centimeter accuracy to targeting, navigation and survey operations. GPS-S provides precise survey and positioning information necessary for construction; precise position navigation and timing; topographic survey, hydrographic survey, construction, and geodetic control. GPS-S AAO: 773

AUTOMATED INTEGRATED SURVEY INSTRUMENT (AISI): AISI is a COTS electronic transit theodolite integrated with Electronic Distance Measurement (EDM) used to measure both vertical & horizontal angles and slope distance from the instrument to a physical, targeted point. The system requires direct line of sight between any two points to establish relative coordinates using trigonometry and triangulation. The data collected is used for the creation of topographic maps and control points of an area of interest. This capability supports Soldier Lethality by adding higher accuracy terrain data that can be exploited for targeting, construction, and design operations. AISI provides the Army Surveyor the capability to determine horizontal and vertical position to a high degree of precision and accuracy in areas where GPS is not available or is operationally constrained. AISI AAO: 886

**Justification:**  
FY 2026 Base procurement dollars in the amount of \$16.595 million will support tech refresh of up to 165 ENFIRE systems.

In accordance with section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110 - 181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.

| Remark 1: ENFIRE, AISI and GPS-S Hardware and Software are 100% Commercial Off the Shelf (COTS) and Government Off the Shelf (GOTS) procurements.                                                                                                                                    |  |                            |               |                      |                     |                                                                                |                      |                     |               |                      |                     |                                                                            |                      |                     |               |                      |                     |               |                      |
| Remark 2: ENFIRE tech refresh kits are comprised of COTS components that replace equipment that has reached the end of its useful life. The technical refresh is critical to modernization, maintaining a strong security posture and interoperability with Army enterprise systems. |  |                            |               |                      |                     |                                                                                |                      |                     |               |                      |                     |                                                                            |                      |                     |               |                      |                     |               |                      |

**Description:**

Army Training Modernization (ATM) consists of three related efforts to include Army National Guard (ARNG) Distributed Learning Program (DLP), Other Training Modernization, and Distributed Learning System (DLS) to acquire Digital Training Facilities (DTFs). DTFs allow rapid delivery of high quality instruction to Army personnel. Infrastructure acquired is based on industry standards and complies with the Joint Technical Architecture (JTA) and Defense Information Infrastructure Common Operating Environment (DII COE), where applicable. This assures compatibility with other military services and that commercial, state, and other resources can be leveraged to achieve cost effective solutions to support all Army components.

ATM provides a cost effective solution for training Army personnel. Supported training enhancements will help reduce the current backlog of Military Operational Specialty (MOS) training. Army can significantly increase levels of MOS qualification, enhance readiness, with standardized Army courseware delivered through Distributed Learning (DL) technology. Implementation of these technology enablers reduce resident training requirements and Soldiers spend less time in the training base and more time in units, thereby increasing readiness. ATM delivers standardized training to Active Component (AC) and Reserve Component (RC) Soldiers as well as Department of the Army Civilians (DAC).

BE4171: The ARNG DLP (Distributed Learning Program). The ARNG DLP provides online capabilities in communities nationwide to support training and readiness of Soldiers and units, assisting in generation of operational forces, and enhance routine and emergency operations. The ARNG DLCs accomplish online activities necessary for individual, operational, and institutional readiness. Funds 400 ARNG DL Classrooms nationwide so Soldiers can access online training and mobilization resources required for individual and unit readiness. During FY 2022, 654 thousand users utilized the ARNG DL Classrooms for more than 518,000 hours to accomplish professional military education, functional training, pre- and post-mobilization training and administrative actions, and routine administrative actions.

BE4173: DLS provides infrastructure for Soldiers to train at or near their assigned station in lieu of resident training at Army schools. DLP and DLS will provide approximately 549 modern distance learning (DL) enabled DTFs and associated supporting infrastructure to augment training at existing resident Army schools. Moreover, DLS has fielded 20 Deployed Digital Training Campus (DDTC) to allow training while units are deployed. Additionally, DLS has fielded 94 Mobile Digital Training Facilities (MDTFs) to the United States Army Reserve Command to support Soldiers/unit training at remote locations. This allows Army to both increase the number of Army personnel receiving required training and the amount of training that can be provided to each individual.

DLS provides the information technology for delivery and management of training in support of individual and collective task training. Benefits include increased training effectiveness and efficiency, improved readiness, and increased training for customers. Key customers: Soldiers (Active Duty, Army Reserve National Guard, and United States Army Reserve) and Army Civilians. Key Stakeholders: Army Capability Manager under Combined Arms Center - Training (Functional Proponent Agent), all other Army Commands, Program Executive Officer - Enterprise Information Systems, and Army General Staff. DLS provides capabilities using Commercial-Off-The-Shelf (COTS) solutions: (1) DTFs: electronic classrooms that deliver multimedia courseware for self-paced training or group training events; (2) MDTF unlike the traditional

| *Title represents 1) the Number / Title for Items; 2) the Number / Title [DODIC] for Ammunition; and/or 3) the Number / Title (Modification Type) for Modifications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                            |             |       |                                        |                                       |                                                                           |                                       |                                       |                                       |                                       |
| Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                            |             |       |                                        |                                       |                                                                           |                                       |                                       |                                       |                                       |
| <p><b>Justification:</b></p> <p>FY 2026 (BE4171) Base procurement dollars in the amount of \$4.768 million support technical refresh of the ARNG Distributed Learning (DL) Program's 400 ARNG DL Classrooms. The ARNG DL Classrooms provide online capabilities in communities throughout the nation to support the training and readiness of Soldiers and units, assist in the generation of operational forces, and enhance routine and emergency operations for the Army National Guard. Technical refresh includes replacement of student and instructor workstations, audio/video equipment, printers, and network connectivity equipment that are past end-of-life or need upgrading to comply with current cybersecurity standards.</p> <p>FY 2026 (BE4173) Base procurement dollars in the amount of \$3.494 million fund the Information Systems Engineering Command Support, the DLS Enterprise Technology Refreshment (Tech Refresh) program in support of all increments (187 Digital Training Facilities (DTF), 94 Mobile Digital Training Facility (MDTF), Enterprise Management Center (EMC), Army Learning Management System (ALMS), and 20 Deployed Digital Training Campus (DDTC)). Annual Tech Refresh which is defined as roughly 20% of the IT infrastructure supporting the systems extends the service life by staying ahead of the obsolescence curve with cost-effective planned technology upgrades, refreshers, and insertions, based on market research and system performance requirements (current and projected). With the advance of information technology, Tech Refresh maintains continued supportability of the DLS Enterprise and avoids disruption of Army Training.</p> <p>In accordance with Section 1815 of the FY 2008 National Defense Authorization Act (P.L. 110-181), this item is necessary for use by the active and reserve components of the Armed Forces for homeland defense missions, domestic emergency responses, and providing military support to civil authorities.</p> |                                            |             |       |                                        |                                       |                                                                           |                                       |                                       |                                       |                                       |

**Description:**  
All information technology (IT) procurements consist of COTS/GOTS solutions; all quantities and unit costs vary by system configuration, site, and geographical location. The Automated Data Processing Equipment (ADPE) program supports the Army's sustaining base automation systems. Each system/program/initiative provides a separate and unique capability that is not funded or supported in another procurement budget line. The Army's primary sustaining base Information Management (IM) goal is to provide information services for the sustainment and readiness of the forces at minimum cost. A stable modernization program is essential to maintain efficiency, increase productivity, and reduce operation and maintenance costs through technological advancement. The Army's modernization strategy to support its warfighting forces in the 21st Century leverages and aligns the use of automation technology to consolidate, streamline, and modernize its management information systems to support Command, Control, Communications, Computers (C4) for the Warfighter, power projection strategies, battle space awareness, Army Transformation, and downsized force structures. Modernization plans flow from strategic planning (mission needs) and ensure standardization, interoperability, and systemic replacement of equipment that is obsolete due to technology changes, reliability, and serviceability. The ADPE program provides combat service support to the Warfighter in the areas of command and control, personnel, training, and other sustaining base functions.

OPTICAL DIGITAL EQUIP (BD3956):  
INTERACTIVE PERSONNEL ELECTRONIC RECORDS MANAGEMENT SYSTEM (iPERMS): The iPERMS supports the Army's military personnel management mission on 24 hours a day/7 days per week basis as required by Titles 10 and 44 US Code and DoD Directive 5015.2. The iPERMS is the Records Management Application (RMA) for the Army Military Human Resource Record (AMHRR), also known as the Official Military Personnel File (OMPF). It is used by Army Human Resource Managers and Soldiers throughout the world as the authoritative source for Army personnel documents and is also the repository for Soldier pay-substantiating documents. The documents in iPERMS are critical to the Army's Promotion, Command, and School Selection Board processes for both Enlisted and Officer Soldiers, and Army Audit Readiness. Over 308 million individual AMHRR/OMPF documents in iPERMS support the Active Army, Army Reserve, and Army National Guard personnel functions at all command levels and are available to the individual Soldier via web access. Currently, 9.1 million personnel files are supported by iPERMS, and the number of supported records and associated documents historically grows 2-4% annually. The system also supports other activities such as the Department of Veteran Affairs, Department of Labor, and Federal, State, and local Law Enforcement agencies. iPERMS is an enduring application that currently interfaces directly with IPPS-A and is not scheduled to be subsumed. This program is linked to RDTE Program Element 0605013A, Information Technology Development, Project Number FM7, Project Title Human Resources Information Technology.

HQ MANAGEMENT INFORMATION SYSTEMS (BE4161):  
HEADQUARTERS, DEPARTMENT OF THE ARMY AUTOMATED DATA PROCESSING EQUIPMENT (HQDA ADPE): The HQDA ADPE provides life cycle replacement of Video Teleconferencing environments at the Army agencies in the Pentagon, the National Capital Region, and select remote sites, including both classified and unclassified systems. The robust IP-based VTC environment helps eliminate costly dedicated Integrated Services Digital Network (ISDN) lines and unreliable ISDN-based systems, and significantly reduces local travel and temporary duty travel costs. This program also supports HQDA staff

| STRATEGIC COMMAND CENTERS (SCC): The SCC provides core C4 infrastructure for Joint, Coalition and Interagency C4 capabilities at Army and Army supported command centers. These include US European Command (EUCOM), US Africa Command (AFRICOM), US Forces Korea (USFK), US Joint Special Operations Command (JSOC), US Southern Command (SOUTHCOM), HQDA Army Operations Center (AOC), and the Alternate National Military Command Center (ANMCC)-Site R. Specifically, SCC provides resources for Army supported Combatant Commander (COCOM) C4 infrastructure in support of other IT programs of record (POR) such as the Global Command and Control System (GCCS) Family of Systems (FoS). The SCC provides core C4 infrastructure for Joint and COCOM sites to include system and technical facilities, Protected Distribution Systems, and site preparation for other support equipment such as Video Teleconference (VTC), data, voice, displays, audio-visual equipment, cabling, and lighting. This infrastructure supports COCOM requirements for Command and Control (C2) operations and worldwide Information Assurance and Security Assistance. These sites are designated as key National Military Command System (NMCS) Command Centers and are required to operate 24 hours a day/7days a week.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                        |                                                                               |
| U.S. FORCES KOREA (USFK) HEADQUARTERS (HQ) COMMAND, CONTROL, COMMUNICATIONS, COMPUTERS, AND INFORMATION TECHNOLOGY (C4IT): The USFK HQ C4IT network provides the end user computing and application environments for USFK. It supports users at Yongsan, Camp Humphreys, Camp Walker, and other sites on peninsula, with both classified (SIPRNET, CENTRIXS-K) and unclassified (NIPRNET) computing capabilities for US and Allied Forces. Systems and services include information assurance and security to further automate infrastructure scanning and patching to identify security vulnerabilities, take corrective actions, and investigate security incidents. The networks support US and Alliance planning and C4 tools to provide vital support to the theater's battle Command and Control capabilities by projecting and evaluating effects of Theater Operations to shape strategy, battle plans, and contingency operations on peninsula. These tools also provide advanced concept technology demonstration as well as communications, computing, and intelligence capabilities, tailored to peninsula operational requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                        |                                                                               |
| MACOM AUTOMATION SYSTEMS (BE4162):<br>BATTLE LAB COLLABORATIVE SIMULATION ENVIRONMENT (BLCSE): This funding enables the Battle Labs (BL) to operate BLSCE and provides maintenance and operation through Life Cycle Replacements (LCR) for validated, approved, certified, and updated equipment authorized for use on the network. Funding will support BLSCE and allow the Maneuver Support Capability Development Integration Directorate (CDID) BL (MSBL) Authority to Operate (ATO). Supports the BLCSE Community of Practice (CoP) with critical infrastructure hardware required to support lab-based risk reduction for Project Convergence and other Army Experimentation events, which includes servers, switches, and routers. It also provides for scientific workstations that require significant system resources to run computationally expensive simulation applications, novel networking technologies, and three-dimensional (3D) visualizations required to replicate future technologies and network configurations. The BLCSE battle labs are spread across 9 different locations within CONUS, however, they work labs work collaboratively across all entities: Futures and Concepts Center (FCC) G-357, Maneuver CDID, Maneuver Support CDID, Cyber CDID, Intel CDID, Fires CDID, Mission Command CDID, Aviation CDID, and Joint Modernization Command (JMC). This funding enables the Battle Labs to operate BLSCE and provides operational support to Army experimentation to deliver Army 2030 and Design Army 2040 on validated/approved/certified/updated equipment authorized for use on the network. Funding allows maintenance and operation of BLSCE through Life Cycle Replacements. Funding to maintain and operate BLSCE through Life Cycle Replacements. Funding will support BLSCE and allow MSBL Authority to Operate (ATO). The BLCSE battle labs are spread across 9 different locations within CONUS, (FCC G-357), Maneuver, Maneuver support, Cyber , Intel, Fires, Mission Command, JMC and Aviation). These labs work collaboratively across all entities to be prepared and ready to field the Army of 2030. |                                        |                                                                               |
| U.S. AFRICA COMMAND (AFRICOM) AUTOMATED DATA PROCESSING EQUIPMENT (ADPE): The AFRICOM ADPE systems provide both classified and unclassified computing and audio-visual capabilities. These capabilities provide unified communications servers integrating voice, teleconferencing, video teleconferencing, collaboration, and messaging services to enhance command and control missions. These systems also reduce the physical footprint of the hardware infrastructure and enable Continuity of Operations Planning (COOP) and data recovery throughout the area of operation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                        |                                                                               |
| U.S. SOUTHERN COMMAND (SOUTHCOM) AUTOMATED DATA PROCESSING EQUIPMENT (ADPE): The SOUTHCOM ADPE provides the end user computing services and application environments for SOUTHCOM HQ and users at the United States Army Garrison-Miami (USAG-M) in Doral, Florida, two Joint Task Forces (JTFs) at Guantanamo Bay, Cuba (JTF-GTMO) and Soto Cano AB, Honduras (JTF-Bravo), and 27 Security Cooperation Offices (SCO) collocated with U.S. Embassies throughout the SOUTHCOM Area of Responsibility (AOR). SOUTHCOM ADPE provides both classified and unclassified computing capabilities as well as the hardware to meet Joint Information Environment (JIE) and Data Center Consolidation mandates. These efforts will reduce costs and create efficiencies by streamlining end user equipment with increased mobility and access to virtual desktops anytime, anywhere, and on any device. Increased cyber protection capabilities include scan and patch tools to identify security                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                        |                                                                               |

| vulnerabilities, investigate security incidents, and take corrective actions. Other capabilities include unified communications servers to integrate voice, teleconferencing, video teleconferencing, collaboration, and messaging services to enhance mission success throughout the SOUTHCOM AOR. Centralized management and control of physical and virtual servers will reduce costs and the physical footprint of the hardware infrastructure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                        |                                                                               |
| U.S. EUROPEAN COMMAND (EUCOM) JOINT OPERATIONS CENTER (JOC): The EUCOM JOC modernization improves operational network capabilities and system availability/ reliability. This effort implements and life-cycles multi-enclave back-end infrastructure, integrates coalition C2 capability into the JOC, implement JADC2-consistent feed integration, and integrates C2 capabilities with alternate JOC locations, to support contingency and crisis operations. Specific procurements include integration of existing C2 systems with emerging capabilities such as MAVEN and ADVANA, audio/visual and display support to multi-domain information within primary and alternate JOC locations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                        |                                                                               |
| U.S. EUROPEAN COMMAND (EUCOM) ASSURED MISSION DATA AVAILABILITY (AMDA): The AMDA program establishes and lifecycles non-Enterprise data resiliency nodes for EUCOM critical C2 capabilities in support of EUCOM warfighting functions. These nodes are located south of the Alps and across the English Channel. This program enables network fail-over in support of Command Disaster Recovery and Continuity of Operations activities. This capability mitigates critical IPL gaps across the theater and provides incremental modernization into OCONUS cloud-capable systems. Specific procurements include compute and storage, cross-domain capability to support command and control across US and coalition networks, audio/visual capabilities connected with secure and coalition communications, and remote/distributed access for COOP personnel in case of crisis or contingency.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                        |                                                                               |
| ARMY COMPUTING INFRASTRUCTURE (ACI): Army Computing Infrastructure (ACI) project supports the modernization of the Army Edge Computing Capability (AECC), Army's Compute and Store, which supports Joint and Next Generation Command and Control (NGC2) initiatives. ACI enables a Unified Network for theater-centric mission command data flows and Installation Service Nodes (ISN). Delivers OCONUS on-premises SIPR, Secret Releasable (SECREL), NIPR compute & store data storage, network connectivity devices, and infrastructure upgrades necessary to meet power, connectivity, and cybersecurity requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                                        |                                                                               |
| HEADQUARTERS (HQs) COMMAND AND CONTROL FACILITY (C2F) INFRASTRUCTURE COMMUNICATIONS (COMMs): Command and Control Facility (C2F) in the US Army is a facility that uses a combination of equipment, personnel, communications, procedures, and facilities to help commanders plan, direct, coordinate, and control forces and operations. These functions are carried out through a combination of personnel, equipment, communications, facilities, and procedures. This capability support in maintaining and relaying critical communications between air, naval, and ground forces; implementing emergency plans for natural and wartime disasters; relaying command center information to high-level military and government decisionmakers; monitoring surveillance and detection systems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                        |                                                                               |
| PERSONNEL AUTOMATION SYSTEMS (BE4164):<br>PERSONNEL ENTERPRISE SUPPORT-AUTOMATION (PES-A): The PES-A is an Information Technology (IT) Enterprise infrastructure acquisition program that provides integrated support to the Army Human Resources (HR) community and the Army Accessioning IT Mission which encompasses the automation support for the Army personnel systems, recruiting, accessioning, and Reserve Officers' Training Corps commissioning missions that satisfy Army manning and force strength requirements supporting the Warfighter. The PES-A is critical to the execution of the day-to-day operations for the Active Army and its components in terms of strength accounting, personnel movement, assignment actions, career management, training, recruiting, reenlistment, and mobilization by providing the hardware, network, and connectivity capabilities that serve as the technical foundation for core Army HR systems, applications, and services supporting the Warfighter. These systems include the Enlisted, Officer, and General Officer Selection Boards, the Soldier's Management System (SMS), and the Defense Casualty Information Processing System (DCIPS). The PES-A supports the readiness and well-being of Army personnel enabling efficient and effective management of Soldiers world-wide. This integrated infrastructure serves as the backbone for applications to ensure that crucial data and information is available at all times to Soldiers, Army Leaders, the Department of Defense, and ultimately, Congress. The Army Accessioning IT Mission serves as an enabler for Total Army recruiting [Active, Reserve, and Army National Guard (ARNG)], in the public, educational, and commercial sectors, where the accessioning force and future force reside while exchanging data with Army and Department of Defense (DoD) automated personnel systems. |                                        |                                                                               |
| The Recruiting enterprise IT mission delivers global automation and data-driven decision support to Commanders, field recruiters, special mission recruiters, and guidance counselors across the Regular Army and Reserves, eliminating administrative burdens while ensuring leadership has real-time access to applicant data. This mission directly supports Army CIO strategies, Army G6 priorities, and the Army Transformation Initiative, reinforcing force readiness and responsiveness to evolving directives. Aligned with SECDEF/SECA priorities, the mission enables electronic applicant data capture and projection, ensuring agility in business processes while synchronizing Army recruiting operations, talent acquisition, and readiness assessments. It integrates with Army Vantage, the Integrated Personnel and Pay System - Army (IPPS-A), the MEPCOM Integrated Reservation System (MIRS), and the Accessions Information Environment (AIE) to facilitate secure data exchange and predictive analytics for strategic decision-making. Beyond operational efficiency, recruiting enterprise IT provides Continuity of Operations (COOP) and disaster recovery, safeguarding mission-critical applications while serving as the authoritative source for lead                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                        |                                                                               |

| generation, historical production data, and force management reports. It fully automates recruiting operations and applicant self-processing, enhancing digital transformation efforts and workforce sustainability. By reinforcing Army modernization goals, the recruiting IT mission strengthens strategic deterrence, precision in recruiting operations, and data-driven talent acquisition, ensuring the Army meets emerging challenges with efficiency, adaptability, and lethality while sustaining the all-volunteer force.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                            |         |                                        |              |                                                                               |                                          |                 |         |         |         |
| UNITED STATES MILITARY ENTRANCE PROCESSING COMMAND (USMEPCOM) INTEGRATED RESOURCE SYSTEM (USMIRS)): The USMIRS provides the automation and communications capability for USMEPCOM to meet its peacetime, mobilization, and wartime military manpower accession mission for the Department of Defense (DoD). The USMIRS is used at 65 Military Entrance Processing Stations (MEPS), 2 Remote Processing Stations (RPS) and approximately 173 Military Entrance Test (MET) sites throughout the US and its territories. The USMIRS is the only official DoD joint accession resource system that processes applicants for enlistment into all Services. It collects, stores, edits, processes, and reports applicant and enlistment data on every US Military applicant to determine their aptitude, medical, and past conduct qualifications for service. The USMIRS interfaces with the Defense Enrollment Eligibility Reporting System, the United States Citizen and Immigration Service, the Defense Counterintelligence and Security Agency, commercial and DoD drug laboratories, the recruiting services, the Defense Manpower Data Center, and many other DoD systems. The USMIRS processes approximately 926.8 thousand individual records annually through its Data Services. This program is linked to RDTE Program Element 0605013A, Information Technology Development, Project Number T04, Project Title USMEPCOM Transformation - IT Modernization. |                            |         |                                        |              |                                                                               |                                          |                 |         |         |         |
| UNITED STATES MILITARY ENTRANCE PROCESSING COMMAND (USMEPCOM) DEFENSE ACCESSION NETWORK (DAN): The United States Military Entrance Processing Command (USMEPCOM)'s Defense Accession Network (DAN) provides the network infrastructure and connectivity for all United States Military Entrance Processing Command (USMEPCOM) sites and services. DAN is used by all USMEPCOM personnel, and all Service Liaisons co-located at Military Entrance Processing Stations (MEPS) and other USMEPCOM sites across the Continental United States, Puerto Rico, Alaska, and Hawaii. DAN supports USMEPCOM's Department of Defense (DoD) directed accession processing mission as specified in DoD Directive 1145.02 to process a sufficient number of military accessions during peacetime and mobilization in accordance with DoD Instruction (DoDI) 1304.26 and title 10 United States Code. DAN is connected to other DoD, Army, other Services, and/or commercial networks. DAN provides the Authority to Operate (ATO) for USMEPCOM networks. MEPCOM Integrated Resource System (MIRS) is accessed over the DAN at HQ USMEPCOM and the MEPS. DAN has about 5,000 users.                                                                                                                                                                                                                                                                                             |                            |         |                                        |              |                                                                               |                                          |                 |         |         |         |
| PERSONNEL AUTOMATION SYSTEMS - WEST POINT (BE4175):<br>US MILITARY ACADEMY (USMA) INFORMATION TECHNOLOGY (IT): The United States Military Academy is a source of commissioned officers and is an accredited institution of higher education, with the responsibility and the authority to confer the Bachelor of Science degree. USMA commissions approximately 1000 graduates each year as officers in the Regular Army. In accomplishing their missions, USMA and the United States Military Academy Preparatory School (USMAPS) rely on Information Technology (IT) to enable education, training, communication, administration, and records management. Through IT operations, USMA engages with the Middle States Commission on Higher Education, the Accreditation Board of Engineering & Technology, the Higher Education Research Institute, the Computer Science Accreditation Board, other Academic Institutions, International Partners, private enterprise, and Defense Agencies. With the authority of the Secretary of the Army, USMA operates an Army Unified Network Council (AUNC) approved, non-DoDIN network (West Point Research & Engineering Network). We are continuously modernizing IT operations to maintain state-of-the art capability in order to remain competitive with peer academic institutions and retain top talent while ensuring the Cybersecurity of the USMA environment.                                                |                            |         |                                        |              |                                                                               |                                          |                 |         |         |         |

**Justification:**

OPTICAL DIGITAL EQUIP (BD3956):

INTERACTIVE PERSONNEL ELECTRONIC RECORDS MANAGEMENT SYSTEM (iPERMS): FY 2026 Base procurement dollars in the amount of \$0.705 million will support initial interactive Personnel Electronic Records Management System (iPERMS) Enterprise Application Migration and life cycle replacement of hardware to include Network Attached Storage, optical storage libraries, servers, system components, and related peripherals. Storage requirements are determined by the corresponding increase of Army personnel records and the DoD/NARA requirement to maintain all personnel records for 62 years after separation of the individual service member. These procurements will enhance system stability, support expansion requirements, and ensure reliable customer support at all levels.

HQ MANAGEMENT INFORMATION SYSTEMS (BE4161):

FY 2026 Base procurement dollars in the amount of \$13.926 million support global Strategic Command Centers, US Forces Korea, US Army Combat Readiness Center requirements for systems engineering and installation of Command, Control, Communication, Computers (C4) infrastructure, hardware (hubs, servers, protected cable distribution systems, secure video teleconferencing systems, integration, and monitoring equipment), and program management costs.

MACOM AUTOMATION SYSTEMS (BE4162):

BATTLE LAB COLLABORATIVE SIMULATION ENVIRONMENT (BLCSE): FY 2026 Base procurement dollars in the amount of \$6.941 million support BLCSE with critical infrastructure hardware required to support lab-based risk reduction for Project Convergence and other Army Experimentation events, which includes servers, switches, and routers. It also provides for scientific workstations that require significant system resources to run computationally expensive simulation applications, novel networking technologies, and three-dimensional (3D) visualizations required to replicate future technologies and network configurations.

U.S. AFRICA COMMAND (AFRICOM) AUTOMATED DATA PROCESSING EQUIPMENT (ADPE): FY 2026 Base procurement dollars in the amount of \$4.878 million support AFRICOM ADPE with servers, storage, appliances, unified communications systems, video processing systems, associated, and secure network interfaces.

U.S. SOUTHERN COMMAND (SOUTHCOM) AUTOMATED DATA PROCESSING EQUIPMENT (ADPE): FY 2026 Base procurement dollars in the amount of \$6.154 million support SOUTHCOM ADPE procurements for digital audio/visual routing, switches, audio, displays, control systems, computer interfaces, power controllers, camera stations, classification signs and racks; Funds also support integration services (system assembly, installation, and checkout on site), training (services), and Certification and Accreditation (Risk Management Framework) authorization services.

| U.S. EUROPEAN COMMAND (EUCOM) JOINT OPERATIONS CENTER (JOC): FY 2026 Base procurement dollars in the amount of \$5.094 million support EUCOM JOC and integrated alternate JOC locations, including redundant C2 capabilities, data replication and resiliency locations in Belgium, the United Kingdom and Italy, with virtual technologies, multi-enclave clients, firewalls, video teleconferencing equipment, end user devices and storage capacity supporting multiple coalition and classified enclaves.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                        |                                                                               |
| U.S. EUROPEAN COMMAND (EUCOM) ASSURED MISSION DATA AVAILABILITY (AMDA): FY 2026 Base procurement dollars in the amount of \$12.155 million support EUCOM AMDA with classified and unclassified network computing and storage hardware, servers, audio visual equipment, networking, network security devices, network monitoring and load balancing, and end-user devices, to enable network for fail-over in support of command Disaster Recovery and Continuity of Operations activities to support requirements for Operation Atlantic Resolve (OAR). This request is a decrease from the FY 2025 request of \$0.567 million.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                        |                                                                               |
| ARMY COMPUTING INFRASTRUCTURE (ACI): FY 2026 Base procurement dollars in the amount of \$24.372 million supports infrastructure to support the Army's Edge Computing Capability (AECC). Fully supports the Army Data Plan, Army Unified Network Plan (AUNP), and Army Hybrid Cloud Plan permitting greater data accessibility, improved network performance, and enhanced end-user/warfighter experience. This will ultimately lower data latency in disrupted, disconnected, intermittent and low bandwidth (DDIL) environments to support JADC2 operations, theater mission command, Installation Service Nodes (ISN), and log common operating picture.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                                        |                                                                               |
| HEADQUARTERS (HQs) COMMAND AND CONTROL FACILITY (C2F) INFRASTRUCTURE COMMUNICATIONS (COMMs): FY 2026 Base procurement dollars in the amount of \$2.747 million supports the Tech Refresh/modernization requirements to maintain COMMs equipment in the HQs Command and Control Facility (C2F). This building was broken done into 4 PHs of MILCON of which two of the phases included Mission Unique Tails (MUT) which provided the comms infrastructure within these buildings to include the hardware, end user devices, installation costs, and associated fees. The Comms equipment included in PH2 of this project will be 7 years old in FY27. The equipment is already experiencing multiple failures and must be maintained in order to keep up with enterprise Risk Management Framework (RMF) requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                        |                                                                               |
| PERSONNEL AUTOMATION SYSTEMS (BE4164):<br>U.S MILITARY ENTRANCE PROCESSING COMMAND (USMEPCOM) INTEGRATED RESOURCE SYSTEM (USMIRS)): FY 2026 Base procurement dollars in the amount of \$1.308 million support Student Testing scanning equipment for United States Military Entrance Processing Command (USMEPCOM) 67 sites.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                        |                                                                               |
| U.S. MILITARY ENTRANCE PROCESSING COMMAND (USMEPCOM) DEFENSE ACCESSION NETWORK (DAN): FY 2026 Base procurement dollars in the amount of \$5.300 million support the infrastructure for the Defense Accession Network (DAN) with 67 USMEPCOM sites. This includes lifecycle replacement of Command-wide load balancers, network routers, Wireless Intrusion Detection System (WIDS), Wireless Intrusion Protection Systems (WIPS), firewalls, networking monitoring appliances, switches, auditorium/training room audio visual equipment, and servers. Base dollars also support Continuity of Operations (COOP), and data recovery.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                                        |                                                                               |
| PERSONNEL ENTERPRISE SUPPORT-AUTOMATION (PES-A): FY 2026 Base procurement dollars in the amount of \$5.938 million support PES-A application migration, integration into a single architecture, cloud migration/management of the Human Resources Center of Excellence (HRCoE) Data Center IT Infrastructure at Ft Knox, to include: tech refresh, mainframe, web and blade servers, network, backup/recovery, storage, Storage Area Network (SAN), routers, switches, load balance appliances telephony, disaster recovery equipment, Information Assurance compliance, and data center/architecture consolidation requirements and cloud migration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                        |                                                                               |
| PERSONNEL AUTOMATION SYSTEMS - WEST POINT (BE4175):<br>U.S. MILITARY ACADEMY (USMA) - WEST POINT: FY 2026 Base procurement dollars in the amount of \$4.286 million supports modernization of IT capability in classrooms, audio-visual technology in academic/administrative/athletic facilities and Cadet barracks. Funding enables continuing modernization of the West Point Research and Education Network (WREN), the Academy Management System (Azimuth), the Distributed Antenna System (DAS), IT communications, and life-cycle upgrade/replacement of legacy hardware. This network modernization will allow USMA to work toward implementing both Internet Protocol version 6 (IPv6) and Zero Trust Architecture (ZTA) as directed by the Department of the Army. The funding supports modernization of the Academy's Student Information System (Azimuth), providing data management and integration with West Point Microsoft Azure. Funding also supports modernization of equipment enabling the West Point Research and Education Network, including IPv6 capability and Zero Trust Architecture, as mandated by DoD. The system will be cyber secure and compliant while enabling both education and research. Funding supports modernized communications and audio-visual technology in academic and administrative facilities. Legacy capability will be replaced with state-of-the art systems, supporting all Academy operations. |                                        |                                                                               |

| Gross/Weapon System Unit Cost (\$ in Thousands)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | -           | -       | -       | -                                      | -           | -             | -                                                                                      | -                                        | -       | -               | -           | -     |
| Description:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |             |         |         |                                        |             |               |                                                                                        |                                          |         |                 |             |       |
| <p>The Accessions Information Environment (AIE) modernizes the Army's accession and recruiting process as a fully integrated enterprise system with new business practices and updated recruiting capabilities. Modernization allows the recruiters to dedicate more of their time in the field with potential recruits rather than at his/her desk processing paperwork and pulling data from multiple legacy systems, while using any mobile devices. AIE leverages Salesforce Inc., Original Equipment Manufacturer (OEM), to deliver a minimally customized Commercial-Off-The-Shelf Customer Relationship Management (CRM) solution hosted in a commercial Salesforce and Amazon Web Service (AWS) Cloud Impact Level 4 (IL4) environment for talent acquisition Army-wide. AIE supports the Army's accessioning process through its four missions: (1) Enlisted Soldiers, (2) Commission Officers through the Reserve Officers' Training Corps (ROTC) program, (3) In-Service requirements, and (4) Direct Commission. AIE will deliver eight core capabilities: lead generation &amp; management, prospecting, interviewing, processing, pay &amp; incentives, intelligence, marketing, and training/leader development. The AIE serves as the Army's accessions system of record to interface and synchronize with multiple Army HR agencies and systems to improve the Soldier's experience, which ultimately gains effectiveness and efficiency for the Army's recruiting force.</p> <p>The program transitioned from waterfall development to Agile Scaled Agile Framework (SAFe) 6.0 to better execute software development and fielding. Within the SAFe 6.0 framework, AIE emphasizes on human-center design processes throughout the Development, Security, and Operations (DevSecOps) Continuous Integration/Continuous Delivery (CI/CD) pipeline using Agile ceremonies. With this approach, the program can accelerate software development to meet business requirements, ensures code quality, and ensures software security for end user requirements. Additionally, AIE partnered with National Guard early adopters, in 3QFY24 to maximize user feedback and release a series of prototype software previews to establish a Minimum Viable Capability Release (MVCR). In 1QFY25 the program deployed the MVCR, defined within DoDI 5000.87 as initial capabilities to enhance mission outcomes, by delivering initial capabilities of Lead Management, Prospecting, Interviewing, Processing, and setting the baseline for continuous and iterative deployment of functionality to support the Enlisted Mission throughout FY25.</p> <p>AIE will release new software capabilities to the field every 2 weeks aligned to following major capability areas:</p> <ul style="list-style-type: none"><li>1.0 Enlisted Recruiting Mission - final release projected 2QFY26</li><li>2.0 In-Service and Direct Commission Mission - final release projected 2QFY28</li><li>3.0 ROTC Campus and Summer Mission - final release projected 4QFY29-1QY2030</li><li>4.0 Accessions Support Mission - final release projected 4QFY28</li></ul> <p>Note: In accordance with DoDI 5000.87, AIE will continually release software updates until the final release and will then continue software updates and fixes through the system end of life (EOL) projected FY39.</p> |             |         |         |                                        |             |               |                                                                                        |                                          |         |                 |             |       |

| <b>Description:</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                                   |                |                |                                               |                    |                      |                                                                                          |                                            |                |                        |                    |              |
| <p>The Department of Defense (DoD) High Performance Computing (HPC) Modernization Program, managed by the Army, supports the needs of all services for technological superiority and military dominance on the battlefield by providing advanced computational services to U.S. weapons system scientists and engineers. By exploiting continuous advances in high performance computing technology, the Defense Research, Development, Test and Evaluation (RDT&amp;E), and acquisition engineering community is able to resolve critical scientific and engineering problems quickly and with more precision. The results of these efforts align to DoD National Defense Strategy priorities, such as hypersonics, directed energy, autonomy, and artificial intelligence, and feed directly into the acquisition process by improving weapons system designs through an increased understanding of materials, aerodynamics, chemistry, fuels, acoustics, signal image recognition, electromagnetics, and other areas of basic and applied research as well as enabling advanced test and evaluation environments that allow synthetic scene generation, automatic control systems and virtual test environments. As such, HPC has been identified as a key enabling technology essential to achieving the objectives of the DoD's Science and Technology (S&amp;T), Test and Evaluation (T&amp;E), and acquisition communities. The program deploys compute-intensive and data-intensive systems to provide world-class HPC capabilities to the DoD-wide user community.</p> <p>The HPC Modernization program provides focused modernization efforts crafted to ensure DoD's S&amp;T and T&amp;E communities are supported with current generation supercomputing capabilities. The HPC modernization program resulted from congressional language that recognized supercomputing as a national strategic asset and directed the DoD to focus on supercomputing modernization at laboratories and test centers to keep its forces and military systems on the leading technological edge.</p> |                                   |                |                |                                               |                    |                      |                                                                                          |                                            |                |                        |                    |              |

| Note: Totals in this Exhibit P-40 set may not be exact or sum exactly due to rounding.                                                                                        |                                              |             |       |                                        |                                       |                                                                                   |                                       |                                       |                                       |                                       |

**Justification:**  
FY 2026 Base procurement dollars in the amount of \$74.708 million supports the following efforts:

FY 2026 Base procurement dollars in the amount of \$70.708 million supports the following efforts: (3) HPC systems at three (3) DoD Supercomputing Resource Center (DRSC) locations with the cost per location dependent on the system architecture.

FY 2026 Base procurement dollars in the amount of \$4.000 million supports two (2) DoD HPC Project Investments (DHPs) for Army, Navy, Air Force, or Agency initiatives or two (2) exploratory HPC systems. DHPs require unique specifications or computing classification that cannot be addressed with shared, allocated HPC systems. Exploratory HPC systems investigate new use cases and workloads beyond traditional modeling and simulation, such as big data, artificial intelligence, tactical computing at the edge.

| Remarks:<br>The High Performance Computing Modernization Program (HPCMP) has a basic ordering agreement (BOA) arrangement through the Engineer Research and Development Center (ERDC) with the Army Corps of Engineers, increasing speed to award and acceptance. Other contracting mechanisms may be utilized by the Program if determined to be more advantageous in terms of cost or schedule. All procurements are commercial off the shelf or government off the shelf (COTS/GOTS). The cost per system will vary based on system architecture and DSRC location.<br><br>Defense Super Computing Resource Center - unit cost per location varies and is dependent on the system architecture.<br><br>This item is a Commercial Off the Shelf (COTS) / Government Off the Shelf (GOTS) item and does not require the P-21 form |                     |               |                      |                     |               |                                                                                   |                     |               |                      |                     |               |                                                                              |                     |               |                      |                     |               |                      |

| Gross/Weapon System Unit Cost ( <i>\$ in Thousands</i> )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | -                          | -              | -              | -                                             | -                  | -                                                                            | -              | -                                               | -              | -                      | -                  | -            |
| <b>Description:</b><br><p>The Army Contract Writing System (ACWS) will be the Army's next-generation, enterprise-wide contract writing, management, execution, and close-out software system. ACWS will facilitate the standardization of Army Procurement business processes and streamline the integration with Army Enterprise Resource Planning (ERP) systems. As a comprehensive financial feeder system, ACWS will address the complete range of Army contracting needs. This includes contracts in both secure and non-secure environments, support for combat and non-combat contingencies, operations within and beyond the borders of the Continental United States, as well as assistance with grants and agreements. Additionally, ACWS will facilitate activities related to weapons systems, construction, installation, specialized contracting, and compliance with the Federal Financial Management Improvement Act of 1996.</p> <p>Based on Army Senior leadership direction, the Army pivoted to a Portfolio Approach that leverages existing technologies, maximizes share-ability and reuse across the DoD, and includes iterative design, development and testing for the remaining capability required for Army users. The overall approach includes on boarding United States Department of Agriculture's (USDA) resources to act as the system integrator (SI), leveraging an Interagency Agreement (IAA) and using existing capabilities across DoD in order to minimize the development effort. To meet requirements, ACWS leverages functionality from Air Force's Contracting Information Technology (CON-IT), Army's Virtual Contracting Enterprise (VCE), DoD's Procurement Integrated Enterprise Environment (PIEE), GSA's System for Award Management (SAM), and other existing Robotic Process Automation (RPA) programs for an integrated Army system to enable decommission of Standard Procurement System (SPS) and Procurement Automated Data and Document System (PADDS). This approach enables contracting business intelligence and analysis.</p> <p>The Army is collaborating with the USDA Enterprise Application Services using IAAs to support development and delivery. The program has transitioned to the Agile development framework and conducted a discovery (risk reduction) effort in 2022, which informed development and resource requirements. The pivot implements Continuous Integration Continuous Delivery (CI/CD) to support iterative development, testing and deployment to provide a flexible system responsive to warfighter needs.</p> <p>In FY 2026, the program plans to complete deployment to remaining PADDS users to facilitate sunset of that system by the end of the fiscal year.</p> |                            |                |                |                                               |                    |                                                                              |                |                                                 |                |                        |                    |              |

| Justification:<br>FY 2026 base procurement dollars in the amount of \$0.468 million will fund fielding support, deployment and training assets for the Army Contract Writing System (ACWS) program. FY 2026 OPA funding supports deployment to remaining PADDS users support system. ACWS Funding decrease from FY 2025 to FY 2026 represents the program having fewer commands to deploy than in FY 2025 totaling \$1.199 million. |                            |         |                                        |                 |                                                                       |                                          |                 |         |         |         |

| Gross/Weapon System Unit Cost (\$ in Thousands)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | 1,623.417   | 249.140 | -       | -                                      | -           | -             | -                                                                | -                                   | -       | -               | -           | -     |
| Description:<br>The Combat Service Support (CSS) Communications funding line supports the Army's Command Control (C2) Transport strategy. This funding line also supports the Army's strategy for Logistics Transport Convergence.<br><br>The CSS Communications funding line supports the Army's Sustainment Transport System (STS). STS is a data transport capability through satellite communications (SATCOM) and is an integrated component of the Unified Network, targeted at providing unclassified communications to Army sustainment units in their support to the Warfighter. STS provides network connectivity and enables a SATCOM pathway for logistics, financial management, personnel, and health service support data to be exchanged on the battlefield between multiple echelons and enterprise data sources. STS provides critical connectivity on the battlefield where the Integrated Tactical Network (ITN) and other communication systems do not extend to dispersed and forward deployed sustainment units.<br><br>Operational needs require a smaller, lighter system that is able to transition between frequency allocation bands and also provide logisticians with high-speed distributed access to the DOD Information Network (DODIN) to ensure continuous, integrated, and synchronized support across the enterprise while minimizing network and data vulnerabilities. To meet these critical needs, STS will replace the currently fielded CSS Very Small Aperture Terminal (VSAT) and CSS Automated Information System Interface (CAISI).<br><br>Based on the approved requirements document "STS Annex III to the Bridge to Future Network (BFN) Capability Production Document (CPD)", STS enables Beyond Line-of-Sight (BLOS) communication and enterprise access to the DoD Information Network-Army (DODIN-A) with modernized SATCOM Systems. Included with each SATCOM System is a SATCOM terminal, a cyber-resilient baseband kit, and support equipment. Modernization splits the CAISI into two distinct capabilities to enable more flexibility for the unit to adjust concepts of operation and for the program to adapt to emerging technologies. Based on unit requirements and mission needs, each SATCOM system can be paired with varying combinations of 1) Line of Sight (LOS) transmission equipment to extend network access to the forward edge of battle; and 2) Wireless Network Access (Wi-Fi) to provide dispersed elements a dedicated connection to the network. The current proposed AAO for modernized systems represents a significant reduction to 16,537 end items fielded: 2,538 SATCOM Systems, 8,923 Wi-Fi Systems, and 5,076 LOS Systems.<br><br>Modernization efforts will ensure continued support of Sustainment Information Systems (SIS) communications and logistics Enterprise Resource Planning (ERP) software systems globally, at home station (Garrison), and into the tactical, operational and strategic battle space. These SIS and ERP applications and their associated data are enterprise level services that require on-demand global connectivity and reliable, redundant, and consistent unit access to reach back capabilities to the DODIN-A through modernized communications systems. |             |         |         |                                        |             |               |                                                                  |                                     |         |                 |             |       |

| Milestone C occurred in April 2023 when the Milestone Decision Authority (MDA) approved entry into Low Rate Initial Production (LRIP) of the Production and Deployment phase for the purpose of conducting Initial Operational Test and Evaluation (IOT&E) and preparing for Full Rate Production (FRP). Hardware procured in FY23 and FY24 represent the approved LRIP quantities. |                            |         |                                        |                 |                                                                  |                                     |                 |         |         |         |
| This program is included in the OPA Budget Line Consolidation. In FY 2025, the CSS Communications (BD3501) was consolidated into the SATELLITE COMMUNICATIONS (B56000) program.                                                                                                                                                                                                     |                            |         |                                        |                 |                                                                  |                                     |                 |         |         |         |
