APPROPRIATION LANGUAGE**

For expenses necessary for basic and applied scientific research, development, test and evaluation, including maintenance, rehabilitation, lease, and operation of facilities and equipment, \$15,395,757,000.00 to remain available for obligation until September 30, 2027.

The FY 2026 Overseas Operations accounted for in the base budget are as follows:

In-theater and in-CONUS expenses that remain after combat operations cease and have been previously funded in Overseas Operations \$3,201,000.00.

**COST STATEMENT**

The following Justification Books were prepared at a cost of \$301,924.00: Aircraft (ACFT), Missile (MSLS), Weapons & Tracked Combat Vehicles (WTCV), Ammunition (AMMO), Other Procurement Army (OPA) 1 - Tactical & Support Vehicles, Other Procurement Army (OPA) 2 - Communications & Electronics, Other Procurement Army (OPA) 3 & 4 - Other Support Equipment & Spares, Other Procurement Army (OPA) 6 - Agile Portfolio Management, Research, Development, Test and Evaluation (RDTE) for: Budget Activity 1, Budget Activity 2, Budget Activity 3, Budget Activity 4, Budget Activity 5A, Budget Activity 5B, Budget Activity 6, Budget Activity 7, Budget Activity 8, and Budget Activity 9.

## FY 2026 RDT&E, ARMY PROGRAM ELEMENT DESCRIPTIVE SUMMARIES

### Introduction and Explanation of Contents

1. **General.** The purpose of this document is to provide summary information concerning the Research, Development, Test and Evaluation, Army program. The descriptive summaries are comprised of R-2 (Army RDT&E Budget Item Justification – program element level), R-2A (Army RDT&E Budget Item Justification – project level), R-3 (Army RDT&E Cost Analysis), R-4 (Schedule Profile Detail) and R-5 (Termination Liability Funding for MDAPs) Exhibits, which provide narrative information on all RDT&E program elements and projects through FY 2026.
2. **Relationship of the FY 2026 Budget Submitted to Congress to the FY 2025 Budget Submitted to Congress.** This paragraph provides a list of program elements/projects that are major new starts and terminated programs. Explanations for these changes can be found in the narrative sections of the Program Element R-2A Exhibits.

#### New Start Programs:

<u><i>Budget Activity</i></u>	<u><i>OSDPE / Project</i></u>	<u><i>Project Title</i></u>
02	0602141A / DN6	Science of Massed Responsive Fires
02	0602147A / DM6	Cannon Fires Automation Research
02	0602150A / HP1	High Power Microwave Technology
02	0602180A / DM7	Counter AI App Rsch
02	0602180A / DM8	AI Enabled Contested Logistics Spt Tools App Tech
02	0602182A / DM9	Distributed Multi-Agent Reasoning and Data Fusion
02	0602184A / DN1	Directed Energy Biological Effects
02	0602184A / DN2	Joint Service Small Arms Enabling Tech
02	0602184A / DO1	Modernized Composites & Manufacturing
03	0603040A / DN3	AI Enabled Contested Logistics Spt Tools Adv Tech
03	0603044A / DN4	Joint Service Small Arms Adv Tech
03	0603044A / DO2	Modernized Composites & Manufacturing Adv Dev
03	0603464A / DM5	Affordable High Speed Strike
04	0603639A / DK7	155mm Artillery Propulsion Mod - Adv Component Dev
04	0603639A / DN7	Mobile Long Range Precision Strike Pgm (M-LRPSM)
05	0604270A / DN9	Modular Electro-Magnetic Spectrum Sys (MEMSS)
05	0604804A / H01	Combat Engineer Eq Ed

05	0604818A / DL8	Predictive Logistics
05	0604854A / DH7	Next Generation Howitzer
05	0605037A / DM1	Detainee Management, Accountability, and Reporting
09	0609277A / A83	Electronic Warfare Technology Maturation
09	0609277A / A85	EW-SIGINT Technology-Innovation Pipeline
09	0609278A / A92	Counter Surveillance Reconnaissance (CSR)

**Program Terminations (including transfers to Procurement and Sustainment):**

<b><u>Budget Activity</u></b>	<b><u>OSDPE / Project</u></b>	<b><u>Project Title</u></b>
02	0602141A / AH8	Lethality Materials and Processes Technology
02	0602181A / CM7	Collaborative Convergence Applied Research
02	0602182A / CX5	Sensing in Contested Environments Technologies
02	0602182A / DE6	Understanding Environment as a Threat Tech
02	0602183A / CL5	Air Platform Enabling University Applied Research
03	0603042A / CX9	Sensing in Contested Environments Adv Technologies
04	0604020A / DC8	Army Experimentation and Prototyping
05	0604641A / CF5	Robotic Combat Vehicle (BA5) NGCV-CFT
07	0205412A / EE6	Environmental Information Tech Modernization

3. **Classification:** This document contains no classified data. Appropriately cleared individuals can obtain further information on Classified/Special Access Programs by contacting the Department of the Army.

<b>Exhibit R-2, RDT&amp;E Budget Item Justification:</b> PB 2026 Army		<b>Date:</b> June 2025
<b>Appropriation/Budget Activity</b> 2040: <i>Research, Development, Test &amp; Evaluation, Army</i> / BA 5: <i>System Development &amp; Demonstration (SDD)</i>		<b>R-1 Program Element (Number/Name)</b> PE 0604818A / <i>Army Tactical Command &amp; Control Hardware &amp; Software</i>
<p>Project EK9 / TACTICAL NETWORK OPERATIONS AND MANAGEMENT - This funding supports the Army's NGC2 initiative to modernize the C2 systems Application Layer. Project EK9 includes realigned funding and requirements from Army mission command systems, previously siloed by warfighting function and product. Project realignments are detailed in the R2 B Program Change Summary (Change Summary Explanation) of this form.</p> <p>Project DL8 / Predictive Logistics (PL) is a new start in FY 2026.</p> <p><b>A. Mission Description and Budget Item Justification</b></p> <p>Project 323, Common Hardware Systems (CHS) is a mandated Army Strategic Source, as annotated in AR 25-1 that acquires and sustains highly flexible, cost-effective, and simplified non-developmental solutions that integrate the latest and emerging commercial information technology onto the Converged Mission Command Network. This funding line also supports network solution procurement and sustainment for U.S. Army Reserves, U.S. Army National Guard, U.S. Navy, U.S. Air Force, U.S. Marine Corps, and other Federal agencies.</p> <p>Project C29, the Central Technical Support Facility (CTSF), is the Army's single strategic facility responsible for executing Army Interoperability Certification (AIC) system of system verification/validation checkout, testing, and configuration management for the Army's LandWarNet Baseline. The Centralized Technical Support Facility (CTSF) funding line supports the Army's Network Modernization Strategy Line of Effort LOE 1B Network Enabling Functions.</p> <p>Project C34, the Army Tac C2 Sys Eng project funds the PEO Command, Control, Communications-Network (PEO C3N) System of Systems engineering, Enterprise and Integration efforts. The system engineering efforts are to facilitate overall network interoperability of all the various programs that must be able to seamlessly connect together while addressing their individual distinct requirements. Efforts address continuing evolution of the network within the PEO C3N portfolio of technology across capability enhancement packages to deliver efficient and effective cross-domain technical solution.</p> <p>Project DD1, Unified Network Technology Transition and Integration (UNTTI) is an RDT&amp;E initiative enabling transport of agnostic, high-capacity and resilient tactical communications for expeditionary operations. UNTTI efforts support system/subsystem development and demonstration, aimed at integration, maturation, evaluation and testing to validate system prototypes meet requirements. In FY 2026, UNTTI efforts includes Secure Cellular, Technical Exchange Meeting (TEM) Project - Gateway Automation, Non-Traditional Waveforms Millimeter Wave, Transport Modernization, and Training Start Guides.</p> <p>Project DL8, Predictive Logistics (PL) is a new start in FY26. The FY 2026 funding will support modeling and simulation efforts to inform the development of fuel, ammunition, and critical maintenance requirements for PL Capability Needs Statement.</p> <p>Project DK3, Sensor Computing Environment (SCE), this funding is realigned to Projects EJ6 and EK9 in support of the Army Next Generation Command and Control (NGC2) initiative to modernize command and control (C2) systems, as detailed in the R2 B Program Change Summary (Change Summary Explanation) of this form.</p> <p>Project EJ4, COMMAND POST COMPUTING ENVIRONMENT (CPCE), this funding is realigned to Projects EJ6 and EK9 in support of the Army NGC2 initiative to modernize C2 systems, as detailed in the R2 B Program Change Summary (Change Summary Explanation) of this form.</p>		

**UNCLASSIFIED**

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Army		Date: June 2025
Appropriation/Budget Activity 2040: Research, Development, Test & Evaluation, Army / BA 5: System Development & Demonstration (SDD)	R-1 Program Element (Number/Name) PE 0604818A / Army Tactical Command & Control Hardware & Software	
<p>Project EJ6, TACTICAL ENHANCEMENT, supports the Army Next Generation Command and Control (NGC2) initiative, Data Layer effort. Project conducts prototyping of the integrated data layer, including operating system and common core services in support of the Army's data-centric transformation and Command and Control (C2) strategy. The Data Layer strategy delivers standardization and provides seamless data access across warfighting function applications by leveraging industry best practices for iterative development and Development, Security, and Operations (DevSecOps) with an emphasis on artificial intelligence/machine learning strategies.</p> <p>Project EK9, TACTICAL NETWORK OPERATIONS AND MANAGEMENT, supports the Army's Next Generation Command and Control (NGC2) initiative, Applications Layer effort. Project conducts the prototyping of warfighting functions applications to be delivered to the specifications defined by the Data Layer (Project EJ6) and consolidates and further refines Network Operations (NetOps) Applications that are key to enabling warfighting function applications in a data-centric network with increased efficiency in overall network management. The Applications Layer strategy ensures that warfighting function applications will operate in conjunction with the Data Layer to provide seamless mission command from the enterprise to the tactical edge, leveraging cutting edge available commercial technologies.</p> <p>Project EQ8, Mobile/Handheld Computing Environment (M/HHCE) enables situational awareness (SA) and command and control (C2) for dismounted combat forces through the Nett Warrior (NW) system. M/HH CE utilizes Government-owned Tactical Assault Kit (TAK) as a foundation for integrating a wide array of functional software, such as UAV planning/control, casualty care and logistics. Future versions of NW and TAK will form the SA/C2 baseline for Next Gen C2 dismounted forces. The NW system provides leaders electronic real-time information on friendly positions; information about enemy activity and movement; navigational data and map imagery; a collaborative planning tool; and other mission related graphics which effectively puts the power of the entire Army tactical network in the hands of the dismounted leader.</p> <p>Project ER9, Expeditionary Army Command Post: This funding line supports Army Next Generation Command and Control (NGC2) initiative to modernize Command and Control Systems (C2), Infrastructure layer. Will deliver capability to enhance the survivability and mobility of command post formations. Will replace selected elements of the legacy command post to provide improved expeditionary capability, survivability, agility, and scalability for command post formations at all echelons. By integrating mission command warfighting functions on to vehicle platforms, a dispersed command post construct will enable the battle staff to blend in with the overall maneuver formation while giving the commander the ability to synchronize the close fight on the move.</p> <p>The FY 2026 request for Army Tactical Command &amp; Control Hardware &amp; Software includes \$410,263 thousand of discretionary and \$2,430 thousand of mandatory (reconciliation) for a total of \$412,693 thousand.</p> <p>The mandatory funds include integration, test and evaluation support of Joint Fires Network (JFN) tools and capabilities. Further information for this reconciliation request is provided in Section 20005 (Low-Cost Weapons) of the Reconciliation Exhibit.</p> <p>The FY 2026 request was reduced by \$3.574 million for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative."</p>

<b>Change Summary Explanation</b>						
Adjustment to budget years in the amount of \$3.782 million represents new start Project DL8 / Predictive Logistics.						
Adjustment to budget years in the amount of \$23.927 million represents an increase to Project EQ8 / Mobile/Handheld Computing Environment for Situational Awareness Strategy.						
Adjustment to budget years in the amount of \$297.215 million represents increases to Projects EJ6 / TACTICAL ENHANCEMENT and EK9 / TACTICAL NETWORK OPERATIONS AND MANAGEMENT. These increases reflect Army funding prioritization and consolidation to support the Next Generation Command and Control (NGC2) initiative to modernize Command and Control (C2) systems. NGC2 is one of the Army's highest modernization priorities and will enhance the Army's ability to conduct multi-domain operations by integrating advanced technologies, improving interoperability, and increasing the speed and accuracy of decision-making processes. Funding for NGC2 includes funds realigned from existing mission command system projects that were previously siloed by warfighting function and product. Realigned project funding represents key capabilities that remain critical and relevant to the Warfighter and will continue under the NGC2 Data (EJ6) and Application (EK9) Layer efforts to provide capability within a single NGC2 core architecture that eliminates stove-pipes and reduces duplication of effort. Realigned projects and capabilities are as follows:

Appropriation/Budget Activity 2040: Research, Development, Test & Evaluation, Army / BA 5: System Development & Demonstration (SDD)	R-1 Program Element (Number/Name) PE 0604818A / Army Tactical Command & Control Hardware & Software	
<p>0604818A, DK3: Sensor Computing Environment (SCE) (full realignment) - provides interoperability for sensors and systems across the Army. Capabilities include common sensor data model, definition of standard, interface specification, architecture definition, Mature Software Development Kit (SDK), and compliance verifications &amp; validation tools.</p> <p>0604818A, Project EJ4: Command Post Computing Environment (CPCE) (full realignment) - provides an available, reliable and resilient infrastructure which unifies data and services within the Command Post. Capabilities include self-service capabilities, collaboration tools, data analytics and C2 core capabilities, such as data visualization/management and command post Common Operational Picture (COP).</p> <p>0203728A, Project EF8: AFATDS Increment 1 (full realignment) - provides the Army and Marine Corps automated fire support command, control and communications and supports Hypersonic and long range precision fires (LRPF) capabilities by 1) serving as the key sensor-to-shooter link for the Army and Marine Corps; and 2) providing fully automated support for planning, coordinating, controlling and executing fires and effects. Also provides Joint Targeting support to multi-domain operations (the Army's contribution to JADO) and will address emerging sensor-to-shooter initiatives.</p> <p>0605216A, Project EFA: Joint Target Integrated Cmd &amp; Coordination Suite (full realignment) - provide critical fires/targeting capability for joint and organic Army fire support management and a joint fires/ targeting common operational picture (COP) for joint and coalition partners, as well as at echelon for target development. Capabilities include functionally integrated targeting efforts in a federated method and synchronized targeting tactical picture with Army and Joint Fires COP to support Joint All Domain Command and Control (JADC2) and Multi Domain Operations (MDO) against a near-peer adversary.</p> <p>0604805A, Project 593: Joint Battle Command-Platform (JBC-P) (full realignment) - provides the replacement for Blue Force Tracking (BFT) hardware and software capability, by employing hardened cyber/electronic warfare advancements that will improve data sharing and enhance C2 on-the move (C2OTM) functionality, resulting in more reliable communications. Capabilities include next-generation transceivers, encryption devices, and satellite communication waveforms, including high throughput pLEO, (which are hosted in the transceiver), enabling smart routing across multiple network paths and next-generation software on vehicles and in command posts by providing C2/SA software built in the TAK ecosystem that offers simplicity, intuitiveness, integration of Warfighting Functions (WfF) and enhanced capabilities over the legacy JBC-P software.</p> <p>0604633A, Project 586: Air Traffic Control (full realignment) - provides Airspace Management, planning, and dynamic execution capabilities at all echelons above Brigade and enroute flight following air traffic services. Capabilities include digitized, multi-echelon planning and execution of airspace management and Air Traffic Services, Airspace Control (AC) planning and enhanced AC execution; improved theater, intra-, and inter-Corps/Division Air Traffic Services support; effective battlespace synchronization; and direct links to the Theater Air Ground System through interface with the automated airspace planning and communications systems of the Joint Force Air Component Commander.</p> <p>0604270A, Project DX5: Electronic Warfare And Management Tool (full realignment) - provides a Commander's tool to control, manage, and dominate the Electromagnetic Spectrum (EMS). Capabilities include ability to control &amp; manage Electronic Warfare (EW) assets in order to execute offensive and defensive Electronic Attack, EW targeting, and synchronize EW and Spectrum Management Operations (SMO) across Intelligence, Operations, and Signals in support of Multi-Domain Operations (MDO).</p>

## A. Mission Description and Budget Item Justification

This funding supports the Army's Next Generation Command and Control (NGC2) initiative to modernize the Command and Control (C2) systems, Infrastructure Layer.

Common Hardware Systems (CHS) is a mandated Army Strategic Source, as annotated in Army Regulation (AR) 25-1 Army Information Technology (IT) that acquires and sustains highly flexible, cost-effective, and simplified non-developmental solutions that integrate the latest and emerging commercial IT onto the Converged Mission Command Network. Efforts are aligned to support the Program Executive Office, Command, Control and Communications, Network (PEO C3N) network evaluation and experimentation goals. This funding line also supports network solution procurement and sustainment for U.S. Army Reserves, U.S. Army National Guard, U.S. Navy, U.S. Air Force, U.S. Marine Corps, and other Federal agencies.

CHS provides technical support, warranty support, system engineering and design, and end-of-life and configuration management services to ensure interoperability and integration of hardware throughout the computing infrastructure. CHS continuously analyzes and tracks hardware from cradle to grave, from emerging technology until end of life. The program conducts hardware evaluations that facilitate and simplify the selection of common hardware solutions across numerous Army programs, agencies, Joint Services, and other Federal Agencies including: Mission Command; Tactical Network; Tactical Radios; Intelligence Systems and Analytics; Aviation Systems; Counter-Rocket, Artillery, Mortar (C-RAM); Communication Electronics Command; Combat Capabilities Development Command (DEVCOM); Army National Guard and Reserves; Navy; Air Force; Marines; the Federal Bureau of Investigation; among others. CHS rapidly procures common hardware configurations in support of Army 2030/2040, the sustainment community, and tactical programs that enable continuous modernization. CHS is an enabler of the initiative of continuous transformation, empowering end users to experiment, innovate, and integrate, the most modern Commercial of the Shelf (COTS) IT. CHS is utilized as a procurement contract for the Defense Innovation Unit (DIU) Blue list approved drones to inform this campaign of learning. CHS logistical services include the ability to add worldwide, 24-hour turn-around repair through strategically located support centers for tactical military units. These support centers provide tailorable supply chain and cybersecurity measures, customizable warranty management, maintenance and failure rate reporting, and technical support services to support specific Army program requirements.

CHS is a model for modern acquisition strategy that strengthens the U.S. cybersecurity supply chain and manages risk by providing hardware solutions including servers, storage, clients, networking devices, tactical radios, ruggedized platforms, hand-held end devices, operational transit cases, installation kits, and peripheral devices procured from a mix of small and large businesses. CHS partners with the CECOM Integrated Logistics Support Center (ILSC) to develop a model for sustaining Commercial Off the Shelf (COTS) IT using the Standard Army Supply System.

Exhibit R-2A, RDT&E Project Justification: PB 2026 Army			Date: June 2025			
Appropriation/Budget Activity 2040 / 5	R-1 Program Element (Number/Name) PE 0604818A / Army Tactical Command & Control Hardware & Software	Project (Number/Name) 323 / Common Hardware Systems				
CHS supports Better Buying Power (BBP) initiatives through volume discounting, economies of scale, the elimination of duplication of effort, reduced barriers to entry, price breaks, streamlined processes, reduced cycle times, and centralized contracting. In FY26, Common Hardware Systems (CHS) will be paying for CHS 6 support by providing acquisition support, technical and test support, logistical and contract support.

Title: Acquisition Support		2.716	2.953	2.942	-	2.942
Description: Funding is provided for acquisition support for the following effort.						
FY 2025 Plans: Acquisition support for CHS and customer programs. CHS rapidly procures common hardware configurations across all four Network Modernization Lines of Effort, Capability Sets, and Network Cross Functional Team (CFT). Supports tactical/operational programs that enable the continuous modernization of a unified network requirements, the sustainment community, and DoD and Federal Government customers.						
FY 2026 Base Plans: Acquisition support for CHS and customer programs. CHS rapidly procures common hardware configurations in support of Network Modernization, Network Experimentation, and Command and Control Cross Functional Team (CFT). Supports tactical/operational programs that enable the continuous modernization of a unified network requirements, the sustainment community, and DoD and Federal Government customers.						
FY 2025 to FY 2026 Increase/Decrease Statement: Modest decrease in costs to support the ongoing modernization of unified network requirements.						
Title: Technical and Test Support		1.120	1.446	1.448	-	1.448
Description: Funding is provided for technical and testing support for the following effort.						
FY 2025 Plans: CHS provides technical support, environmental and survivability testing, system engineering and design, end of life/configuration management, and strengthens cyber security/supply chain management across Army tactical/operational programs to ensure interoperability and integration of hardware throughout the computing infrastructure. CHS conducts hardware evaluations that facilitate and simplify the selection of common hardware solutions across numerous Army programs and agencies.						
FY 2026 Base Plans: CHS provides technical support, environmental and survivability testing, system engineering and design, end of life/configuration management, and strengthens cyber security/supply chain management across Army

**A. Mission Description and Budget Item Justification**

Project C29, The Centralized Technical Support Facility (CTSF): The CTSF is the Army's premier test and certification facility for System of Systems interoperability, functioning as CIO/G6's designated independent test agent and Land/WarNet/Mission Command (LWN/MC) configuration manager. The Central Technical Support Facility's (CTSF) directed mission is to perform Army Interoperability Certification (AIC) testing and configuration management for all 23 operational through tactical level Command, Computing, Control, Communications, Cyber, Intelligence, Surveillance, and Reconnaissance (C5ISR) systems, Mission and Space systems, Aviation systems and other individual, family, and system of systems, applications, and hardware prior to release to the field. The CTSF accomplishes this through the enforcement of a standards based architecture while supporting the development and implementation of an integrated computing infrastructure and a converged network. The CTSF provides validated test data to the Department of the Army and Joint agencies to accredit interoperability certifications. The distributed test environment of the CTSF is accomplished through the Federation of Net-centric Sites (FaNS) construct. This FaNS construct addresses distributed integration development and testing using the core infrastructure of the CTSF to harness Army and Joint expertise/resources. Through these federated resources, the CTSF executes or supports interoperability development, integration and certification testing of the systems and system of systems in the Warfighter Mission Area, to include Network Evaluation spinouts, as they become part of the Army's LandWarNet. The cited work is consistent with Strategic Planning Guidance and the Army Modernization and Strategy Plan.

<b>Title:</b> Army Interoperability Certification (AIC) Testing	1.771	1.809	1.840	-	1.840
<b>Description:</b> Conduct Army Interoperability Certification (AIC), planning/coordination/scheduling/ and reporting of Common Operating Environment (COE) and software block testing (local and distributed). Additionally, provide stakeholders data collection/data analysis/data dissemination/simulation/stimulation verification/ validation in support of Army geospatial interoperability certification, system of system cybersecurity posture assessment and individual system cybersecurity policy adjustment. Manage the set-up, configuration, integration, operations and maintenance of the LandWarNet/Mission Command (LWN/MC) systems within the CTSF test environments. Function as the HQDA G-6's Independent Test Agent for Program Managers of LWN/MC systems that have an Acquisition Life Cycle requirement for testing interoperability of software and associated hardware prior to fielding to the Warfighter. Act as the central control node to synchronize the HQDA G-6 accredited Federation of Net-centric Sites (FaNS) distributed AIC testing environment. Report the results of Army Interoperability Certification tests to the HQDA G-6, PM, TRADOC and AFC communities.

<b>FY 2025 Plans:</b> Continue to provide Network support for integration and test floors, network support to fielded units, and systems engineering and analysis support to system of systems integration activities. Enhance the Security posture of the CTSF by ensuring the latest Information Assurance Vulnerability Alerts (IAVAs) and Security Technical Implementation Guides (STIGs) are implemented as required by Risk Management Framework (RMF). Integrate and implement Army End Point Security System (AESS) technology, assist PMs in the development of AESS policies. Plan and conduct engineering evaluations for AIC testing and data collection in the Joint Warfighter Assessment (JWA)/Capability Integration Evaluation (CIE) to leverage the operational environment and JWA/ CIE resources. Work with Network Cross Functional Team on Network modernization and Integrated Tactical Network (ITN ) design and testing. Assist integration and test architectures to include Program of Record (POR) and non-POR Soldier radio waveforms to provide PMs and Material Developers testing in realistic environments. Support Army Test and Evaluation Command (ATEC) and Army Futures Command interoperability assessments of Cross-Functional Team (CFT) solutions. Continue efforts to implement an AIC Secret Releasable test environment network that integrates Army and the Unified Action Partners (UAP).						
<b>FY 2026 Base Plans:</b> Continue to provide Network support for integration and test floors, network support to fielded units, and systems engineering and analysis support to system of systems integration activities. Enhance the Security posture of the CTSF by ensuring the latest Information Assurance Vulnerability Alerts (IAVAs) and Security Technical Implementation Guides (STIGs) are implemented as required by Risk Management Framework (RMF). Integrate and implement Army End Point Security System (AESS) technology, assist PMs in the development of AESS policies. Plan and conduct engineering evaluations for AIC testing and data collection in the Joint Warfighter Assessment (JWA)/Capability Integration Evaluation (CIE) to leverage the operational environment and JWA/ CIE resources. Work with Network Cross Functional Team on Network modernization and Integrated Tactical Network (ITN ) design and testing. <p><b>Description:</b> As the CTSF Configuration Management Office, provide CM functional and physical configuration management and change management to the CTSF Army Interoperability Certification test floor environment. Additionally, as the Army Configuration Management Office (ACMO), establish and maintain oversight control of the Army Master Library for the Army Interoperability Certified Fielded Baseline (AICFB). Archive system software and data products, correlated with their associated documentation, for the Army LandWarNet Mission Command Baseline (ALWNMCB), a subset of the AICFB. Establish and maintain the configuration and change management to the AICFB and the ALWNMCB for Lifecycle Software Management (LCSM). Provide support to the Army Staff (ARSTAF), Material Developers (MATDEV), Project Managers (PM), and System Owners (SO) through the orderly management of product configuration information and product change management (ChM), which enables capability revisions, improved reliability and maintainability, and extended life-cycle. Maintain and improve the Configuration Management Tracking System version 3 (CMTSIII), the Army's authoritative database management system (DBMS) for configuration management (CM) of the systems comprising Coalition Interoperability Assurance and Validation (CIAV), and the Warfighter Mission and Business Mission Areas of the Army Information Technology (IT) portfolio. Assist the HQDA G-6 conduct accreditation inspections and training for Federation of Net-centric Sites (FaNS) locations.</p> <p><b>FY 2025 Plans:</b> Continue to provide CM functional and physical configuration management and change management to the CTSF Army Interoperability Certification test floor environment. Provide CM functional and physical configuration management and change management to the AICFB, to include archiving the required system software, data products and documentation, while correlating the relevant data within the CMTSIII DBMS for visibility to users Army wide. Provide baseline reconciliation to the four quarterly HQDA G6 AICFB reports, identifying to commanders and their G-3/G-6 staff the Army's AIC certified, Interoperability Capability and Limitations assessed, AIC waived, and AIC exempted system software that is authorized to connect to the Army's network. Assist the HQDA G-6 AICFB in conducting accreditation inspections and training for Federation of Net-centric Sites (FaNS) locations.</p> <p><b>FY 2026 Base Plans:</b> Continue to provide CM functional and physical configuration management and change management to the CTSF Army Interoperability Certification test floor environment. Title: Management Operations/Program Office		0.394	0.399	0.407	-	0.407
Description: Provide management operations consisting of planning, programming and executing funds; planning and programming for required personnel; planning, programming and executing contracts supporting AIC testing processes; identifying reimbursable tests and collecting/allocating appropriate funds; planning and programming logistics activities, managing/controlling/documenting physical assets and inventories; and perform oversight and coordination of physical security with hosting installation.						
FY 2025 Plans: Continuation of programming and execution of funding. Plan and program manpower, identify contracting requirements and develop strategy for implementation in conjunction with CECOM Acquisition Center. Track testing schedule, prepare/coordinate/track customer funding for AIC testing activities and infrastructure support. Continue to provide field support coordination for unit training and exercises upon request. Maintain existing infrastructure; continue to enhance physical security, access control, force protection, Continuity Of Operations (COOP) and Emergency Action Plan (EAP) activities and exercises. Continue inventory accountability programs and asset control.						
FY 2026 Base Plans: Continuation of programming and execution of funding. Plan and program manpower, identify contracting requirements and develop strategy for implementation in conjunction with CECOM Acquisition Center. Track testing schedule, prepare/coordinate/ track customer funding for AIC testing activities and infrastructure support. <b>Remarks</b>					
<b>D. Acquisition Strategy</b>					
<p>Transition from executing a single test event at a time to multiple simultaneous test events using new universal mission threads, providing speed and efficiency to the test/acquisition timeline. Execute system of systems interoperability testing and certification through the use of Government and Systems Engineering and Technical Analysis (SETA) contract personnel experienced in product development and interoperability testing. Testing and certification occurs in a cyclical fashion, with an expectation of an annual Software Block/Capability Set test followed with cyclical multiple test events to ensure integrity of software baselines to the Warfighter. Engineering Services provides strategic integration of software into a system of systems/family of systems environment to support interoperability testing. Establish and maintain Configuration Management and version control of the Army's Interoperable Battle Command LandWarNet Baseline. Distributed testing capability uses local assets and leverages other federated test facilities to create synergy and realize efficiencies.</p>

A. Mission Description and Budget Item Justification												
This funding supports the Army's Next Generation Command and Control (NGC2) initiative to modernize Command and Control (C2) systems, Infrastructure Layer. Project C34, Army Tactical Command and Control Systems Engineering supports the Army's Network Modernization Strategy and coordinates technical efforts across and outside of PEO Command, Control, Communications, and Network (C3N) to ensure integration with the current and future Mission Command Network. Project C34 provides technical support to programs, informing design and solutions with specific emphasis on the ability for different program efforts to be integrated and interoperable with one another. Efforts support Army Modernization priorities including Army Unified Network Plan, Multi-Domain Operations, Joint All Domain Command and Control (JADC2), Data Modernization and emerging data-centric requirements.												
Project C34, Army Tactical Command and Control Systems Engineering: This project funds the PEO C3N System of Systems (SoS) engineering and integration, acquisition management, testing, fielding and sustainment support to ensure interoperability and affordability within the PEO C3N portfolio. The effort focuses on SoS Engineering and Integration for the Mission Command Network with increased emphasis on immediate Warfighter needs as well as leveraging emerging technologies.												
Fiscal Year 2026 will fund the continued development, implementation and integration of the Command, Control, Communications, Computers, Cyber, Intelligence, Surveillance, and Reconnaissance (C5ISR) network architectures as the Army begins migration towards the adaptive, data centric environment of Next Generation Command and Control (NGC2). This includes maturing the technology enhancement roadmap for SoS capability evolution across the PEO C3N portfolio that incorporates network integration support and design products for system validation and integration testing, integration of tactical networked capabilities for all Mission Command Network systems including integration events, integration of tactical information assurance solutions and security measures for consistent cyber protection.

<b>D. Acquisition Strategy</b> This project provides the technical and programmatic disciplines required for systems engineering and integration, testing, interoperability, support to fielding and sustainment. It will focus on System of Systems (SoS) Systems Engineering and Integration for the tactical network with increased emphasis on Warfighter needs as well as leveraging emerging technologies. Efforts align to support the acquisition strategies of the programs that must connect to the network.

**A. Mission Description and Budget Item Justification**

Project DD1, Unified Network Technology Transition and Integration (UNTTI) supports the Army's Command Control (C2) Transport strategy.

UNTTI is an RDT&E initiative enabling transport agnostic, high-capacity and resilient tactical communications for expeditionary operations. UNTTI efforts support system/subsystem development and demonstration, aimed at integration, maturation, evaluation, and testing to demonstrate systems against requirements. TEM Projects, Line of Sight Modernization, SATCOM Modernization, Transport Modernization, Secure Cellular, and System of Systems (SoS) Training. These technologies support new and improved communications capabilities with reduced Size, Weight, and Power (SWAP), while increasing throughput, providing network resiliency and Low Probability of Intercept/Low Probability of Detection (LPI/LPD) capabilities.

The Program Executive Office Command, Control, Communications and Network (PEO C3N) is responsible for prioritizing, programming, managing and executing the projects detailed below and ensuring these funds are available to support the Army modernization priorities. The Command and Control Cross Functional Team (C2-CFT), Command, Control, Communications, Computers, Cyber, Intelligence, Surveillance and Reconnaissance (C5ISR) Center, Army Capability Network (ACM) Networks and Services (N&S) support the prioritization of technology demonstrations, focused evaluations, and expert analyses to inform future requirements, mature technologies, and deliver new capabilities. These projects inform technology integration, support user assessments, and transition to programs if appropriate.

UNTTI procures, modifies, integrates, and tests system prototypes to demonstrate enhanced capabilities in accordance with Army modernization priorities. UNTTI supports developing technical, logistics, training, and other acquisition documentation to assist with the transition, insertion, and integration of efforts across PM Tactical Network and enables the transition of developing and new technologies to support NGC2. In addition, UNTTI resources validation and test efforts which improves the reliability, maintainability, and supportability of Tactical Network equipped units. These improvements avoid future costs by mitigating single point failures and thickening the network which ultimately improves network and cyber resiliency along with unit availability for contingency operations.

In FY 2026, funding in the amount of \$14.498M for UNTTI efforts includes Secure Cellular, Technical Exchange Meeting (TEM) Project - Gateway Automation, Transport Modernization, and Training Start Guides.

Remarks											
B11225 SIGNAL MODERNIZATION PROGRAM: This funding line has OPA planned in FY28 for the secure cellular effort, for which we have 6.5 funding planned in FY26 and FY27.											
D. Acquisition Strategy											
UNTTI related technologies will be pursued via competitively awarded contracts using best value source selection procedures. These technologies will be matured, demonstrated, tested, and evaluated in realistic environments. Selected technologies will integrate into existing programs as a modernization effort. The Integrated Product Team of key stakeholders including the Command and Control Cross Functional Team (C2-CFT), Command, Control, Communications, Computers, Cyber, Intelligence, Surveillance and Reconnaissance (C5ISR) Center, Army Capability Network (ACM) Networks and Services (N&S) determine technologies for further evaluation to close capability gaps.

**A. Mission Description and Budget Item Justification**

The Sensor Computing Environment (SCE) provides interoperability for sensors and systems across the Army. SCE operates across any modality of sensors and is designed for resilient operations in tactical conditions. Sensor CE provides the following capabilities to the Army and End Users: Provides software, standards, and a common sensor data model for all sensor information; Enables interoperability and understanding across all network security enclaves; Enables the sharing and control of sensor information; Provides a mature Software Development Kit (SDK) for rapid integration of sensors onto the Army's networks; and Implements the COE Cross Cutting Capability (CCC) for Sensor Alert Distribution providing common sensor awareness from tactical edge to all systems on the Enterprise network.

The end state for SCE is to ensure the accessibility of multi-domain sensor data to those who need it through the network to enable information sharing among CEs while reducing acquisition and life-cycle costs through open standards and re-usable solutions across programs. This vision becomes achievable with the implementation of the COE CCC through the Army's MCN modernization.

DK3 Sensor CE program will support the Army's Common Operating Environment (COE), and the further development of requirements to define the standards for interoperability used when connecting sensors to the Army networks. This will follow the Integrated Sensor Architecture (ISA), which is a Modular Open Systems Approach (MOSA) that provides a modular solution and extensible data model that can be used to meet requirements of operations with any modality of sensor, from Enterprise to tactical networks, across any security enclave, and capable of being used on embedded platforms.

Funding in FY 2026 and beyond is realigned to Projects EJ6 and EK9, in support of the Army's Next Generation Command and Control (NGC2) initiative to modernize C2 systems, as detailed in the R2 B Program Change Summary (Change Summary Explanation) of this form. Capabilities Include: Common Sensor Data Model, Definition of Standard, Interface Specification, Architecture Definition, Mature Software Development Kit (SDK), Compliance Verifications & Validation Tools.

**B. Accomplishments/Planned Programs (\$ in Millions)**

Note												
Predictive Logistics is a new start within the Army Tactical Command & Control Hardware & Software program in FY 2026.												
A. Mission Description and Budget Item Justification												
Predictive Logistics (PL) supports the Army's Next Generation Command and Control (NGC2) initiative to modernize the Command and Control (C2) systems, Applications Layer. Predictive Logistics (PL) is a logistics optimization effort that will deliver hardware/software capabilities that improve unit readiness, support commanders' abilities to monitor, predict, and sustain combat power, and enhance existing maintenance and supply processes. Establishing automated data collection from self-reporting platform sensors, PL will process, store, and disseminate Logistics Status (LOGSTAT) data to the Common Operational Pictures (COP) at platform, command, and enterprise echelons via the Unified Network. This capability will also predict future logistics needs with a focus on Class III (petroleum, oil, lubricants) and Class V (ammunition/explosives) consumables and maintenance alerts, enhancing mission planning and execution.												
FY2026 funding in the amount of \$3.782 million will provide for PL development engineering, modeling and simulation efforts and program management support to inform the development of fuel, ammunition, and critical maintenance requirements for PL Capability Needs Statements.												
B. Accomplishments/Planned Programs (\$ in Millions)								FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
Title: Predictive Logistics Development Engineering, Integration, Modeling & Simulation								-	-	2.333	-	2.333
Description: Includes PL system engineering, modeling and simulation efforts; supports the integration and dissemination of fuel, ammo, and maintenance data from vehicle platforms to existing/ emerging mounted and command post computing systems and the larger Unified Network.												
FY 2026 Base Plans: Funds will support system engineering efforts to establish supply/maintenance data alert thresholds and distribute/integrate data feeds with existing/emerging mounted and command post computing environments. Modeling and simulation will inform PL requirements in support of PL Capability Needs Statements. These efforts will support integration of PL data and applications at the platform level and lower echelons to provide streamlined feedback data to forward sustainment units, and to disseminate data to higher echelons and the enterprise level.												
FY 2025 to FY 2026 Increase/Decrease Statement:

Remarks											
The PL OPA funding line, B29815, funds computer hardware procurement and platform integration/installation, and platform system engineering/assessment in FY26.											
D. Acquisition Strategy											
Predictive Logistics (PL) is a new start in FY26. PL supports the Army's Next Generation Command and Control (NGC2) initiative to modernize the Command and Control (C2) systems Applications Layer. The program will conduct investment activities to inform the acquisition strategy through Acquisition Shaping Panels (ASPs) scheduled in 4QFY25 and 1QFY26. The overall intent of the program is to develop, evaluate, procure, and integrate scalable PL capabilities on select platforms to fulfill the desired characteristics outlined in the Platform Predictive Logistics Abbreviated - Capabilities Development Document, approved 15 April 2024. As the PL Office of Primary Responsibility (OPR), PEO C3N will coordinate PL acquisition efforts, provide business management support to PL development partners (PEO GCS, PEO CS&CSS, and PEO Enterprise), and support integration of PL capabilities with vehicle platforms. Platform PMs will develop and deliver PL capabilities to their respective vehicle platforms with financial support from the OPR.

<p>PL program efforts are intended to inform forthcoming Capability Needs Statement production that is anticipated to approve and direct expanded Predictive Logistics program scale and scope. The project will leverage experimentation supported by the CL-CFT and prior platform integration efforts performed by various vehicle platform programs to integrate Logistics data transport into the Common Operational Picture (COP) and Unified Network for C2 consumption at multiple command echelons.</p>

**Note**

Project EJ4 funding in FY2026 and beyond was realigned to PE 0604818A / Army Tactical Command & Control Hardware & Software Project EJ6, in support of the Army's Next Generation Command and Control (NGC2) initiative to modernize Command and Control (C2) systems, for the Data and Application Layers. The capabilities being developed under this project remain critical and relevant to the Warfighter. These capabilities, along with the resources and requirements will transition under the overarching NGC2 capability to create a unified and streamlined ecosystem.

**A. Mission Description and Budget Item Justification**

The Command Post Computing Environment (CPCE) funding line provides a modular environment with scalable capabilities from Battalion through Army Service Component Command (ASCC), and provides an available, reliable and resilient infrastructure which unifies data and services within the Command Post. The modular environment includes data visualization/management and the Army's primary command post Common Operational Picture (COP), which provides the Commander the ability to understand, visualize, and direct the operational environment facilitating mission planning and execution by leveraging common data and collaboration within and external to the unit through voice, video and chat. The modular environment provides access to all network domains and enables the Mission Partner Environment (MPE). The CPCE implements an integrated, interoperable, cyber-secure, data and software infrastructure that serves as the host for a unified set of multiple warfighting functional applications. This software infrastructure helps to eliminate "stove-piped" systems and duplicative or redundant implementations, while simplifying future application development efforts by providing key interoperability and data sharing improvements across multiple echelons.

The data and software infrastructure and applications reside on Tactical Server Infrastructure (TSI) hardware, as well as previously fielded servers. The TSI provides the converged computing and data storage hardware/software required to host the warfighting mission area applications, MPE capabilities, Common Operating Environment (COE) Cross-Cutting Capabilities and enables a collaborative work environment.

FY 2026 funding was realigned to PE 0604818A / Army Tactical Command & Control Hardware & Software, Projects EJ6 and EK9, in support of the Army's Next Generation Command and Control (NGC2) initiative to modernize Command and Control (C2) systems, for the Data and Applications Layers. The capabilities being developed under this project remain critical and relevant to the Warfighter. The capabilities, along with the resources and requirements will transition under the overarching NGC2 capability to eliminate stove-piping, reduce duplication of effort, and provide capability within a single NGC2 core architecture.

<p><b>Description:</b> Provides the core data and software infrastructure that serves as the host for multiple warfighting functional applications within the command post at echelons Battalion to Army Service Component Command, eliminating "stove-piped" systems, duplicative or redundant implementations, simplifying future application development efforts, and enhancing interoperability and data sharing across multiple echelons. Software development includes the productization, maturation, and scaling of the Tactical Data Platform and data services to enhance the user's experience at the tactical edge. Develops and augments warfighting mission area (WMA) applications that use the common data accessible in the infrastructure. Leverages Continuous Integration/Continuous Delivery to maximize use of user feedback to inform software and capability improvements ensuring backwards compatibility to the previously fielded/enduring systems. Software development efforts will focus on ensuring Command and Control (C2) core capabilities are responsive to user needs through flexible open architectures and modular C2 applications.</p> <p><b>FY 2025 Plans:</b> FY2025 funding matures the tactical data fabric capability, to include continued work on the Combat Power tool; convergence of Warfighting functions applications through integration with Tactical Data Fabric; support to exercises and experiments through Developmental Operations (DevOps) engagements and Soldier Touch Points with Combatant Commands (COCOMs) to inform the implementation of self-service capabilities, collaboration tools, data analytics and C2 Core Capabilities as part of a bridge for future C2 capabilities; development of cloud enabled and edge node computing infrastructure facilitating distributed command and control. Funding also provides implementation of an "over-the-air" content delivery and provisioning capability.</p> <p><b>FY 2025 to FY 2026 Increase/Decrease Statement:</b> FY 2026 funding was realigned to PE 0604818A / Army Tactical Command &amp; Control Hardware &amp; Software, Projects EJ6 and EK9, in support of the Army's Next Generation Command and Control (NGC2) initiative to modernized Command and Control (C2) systems, for the Data and Application Layers.</p>							
<p><b>Title:</b> Hardware/Software Integration</p> <p><b>Description:</b> The Tactical Server Infrastructure (TSI) server stacks host multiple software services including but not limited to: SQL, Chat, Active Directory, Microsoft Exchange, SharePoint, and warfighting mission area (WMA) applications. Primary Hardware/Software integration tasks include automation that reduces set up time, updated security postures for the TSI environment and cloud enabled modular infrastructure (CEMI) to implement lightweight software containers to increase security, reduce resource consumption and operate as a cloud edge node.</p>			1.647	1.610	-	-	-

Remarks											
Funding in FY2026 and beyond was realigned to Line B29810 (Item Number B29801) and BA9301 (Item Number B99418) in support of the Army's Next Generation Command and Control (NGC2) initiative to modernize Command and Control (C2) systems.											
D. Acquisition Strategy											
FY2026 funding has been realigned to PE 0604818A / Army Tactical Command & Control Hardware & Software Projects EJ6 and EK9 in support of the Army's Next Generation Command and Control (NGC2) initiative to modernize Command and Control (C2) systems for the Data and Applications Layers.											
The acquisition strategy for CPCE/TSI program is based upon the concept of Buy and Adapt, whereby the Government procures commercial technology and adapts it to meet specific Government requirements. CPCE/TSI consists of the integration of Commercial off the Shelf (COTS) hardware components, COTS software, and sequentially developed additional software capabilities. The capabilities being developed under this project remain critical and enhance the capabilities of the core infrastructure, tactical data platform and cloud enabled modular infrastructure to align with Army C2 strategy/NGC2 efforts.

**Note**

Project EJ6 is not a new start, but a realignment of funding representing key capabilities that will continue under the Next Generation Command and Control (NGC2) Data Layer efforts.

This funding supports the Army NGC2 initiative to modernize Command and Control (C2) systems Data Layer. Project EJ6 includes realigned funding and requirements from Army mission command systems that were previously siloed by warfighting function and product. Project realignments are detailed in R2 B Program Change Summary (Change Summary Explanation) of this form.

**A. Mission Description and Budget Item Justification**

This funding line supports the NGC2 initiative to modernize C2 systems. NGC2 is one of the Army's highest modernization priorities and will enhance the ability to conduct multi-domain operations by integrating advanced technologies, improving interoperability, and increasing the speed and accuracy of decision-making processes. This funding line specifically supports the Data Layer efforts within NGC2. The Data Layer will deliver standardized and seamless data access across warfighting function applications (e.g. Command and Control, Information Advantage, Movement and Maneuver, Intelligence, Fires, Protection, Sustainment and Network Operations). Real-time access to common data is critical to maintaining a decisive advantage. The Data Layer will leverage industry best practices for iterative development and Development, Security, and Operations (DevSecOps) with an emphasis on artificial intelligence/machine learning (AI/ML) capabilities.

FY 2026 Funding supports prototyping, continuous integration and continuous delivery (CI/CD) and continuous test, evaluation, verification, and validation (TEVV) of the C2 Data Layer. The Data Layer includes the operating system, platform, and common core services (including Applications, Analytics, AI/ML, and Training and Simulation). Funding also supports transition and integration of existing mission command system capabilities into a single NGC2 core architecture that eliminates stove-pipes and reduces duplication of effort. These efforts are essential for managing and sharing C2 data across applications, providing commanders with a common operating picture and the information required to make quick, accurate decisions in any environment.

Remarks											
In FY 2024, Next Generation Command and Control (NGC2) received \$22.128M RDTE (BA-04) in support of NGC2 SWP Planning Phase (PP), funding supports NGC2 Application (EK9) and Data Layer (EJ6).											
In FY 2025, Next Generation Command and Control (NGC2) received \$18M RDTE (BA-04) in support of NGC2 SWP Planning Phase (PP), funding supports NGC2 Application (EK9) and Data Layer (EJ6).											
In FY 2026 and beyond, Unified Network Operations (UNO) BA9301 / B99418 provides the procurement funding to procure and deploy the UNO software releases developed under the Tactical Network Operations Management (TNOM) 0604818A / EJ6 and EK9 funding lines.											
D. Acquisition Strategy											
The Army is modernizing its command and control (C2) approach to secure battlefield superiority. Using modern systems engineering design approaches and industry best practices, the Army will deliver a horizontally integrated common software services framework for Army C2. The Army's modernization involves continuous improvements and integration of all network battlefield components, from transport and infrastructure to data and soldier-used applications.											
This effort focuses on a robust, standardized, governed data foundation and rapid testing and integration of emerging technologies for C2's Data Layer. The goal is to provide soldiers with timely access to critical information, enhancing decision-making and operational effectiveness. On September 9, 2024, the Army Acquisition Executive (AAE) approved the Next Generation Command and Control (NGC2) Software Acquisition Pathway (SWP) program Planning Phase (PP). The Army subsequently aligned its contract strategy with OSD guidance to utilize Commercial Solutions Openings (CSOs) and Other Transaction Authority's (OTAs). The acquisition plan involves enabling a competitive environment by contracting with multiple teams to integrate innovative capabilities while maintaining momentum from the Project Convergence Capstone 5 (PCC5) exercise, with a prototype capability to be demonstrated at Project Convergence Capstone 6 (PCC6) in FY 2026. Initiation of the NGC2 SWP Execution Phase is scheduled for 3QFY26.

Appropriation/Budget Activity 2040 / 5	R-1 Program Element (Number/Name) PE 0604818A / Army Tactical Command & Control Hardware & Software	Project (Number/Name) EJ6 / TACTICAL ENHANCEMENT
<p>This project supports the continuous integration and delivery of the C2 Data Layer, operating system, platform, and common core services (including Applications, Analytics, artificial intelligence/machine learning (AI/ML), and Training and Simulation). The Data Layer strategy provides standardized and seamless data access across all Warfighting function (WfF) applications (e.g. Command and Control, Information Advantage, Movement and Maneuver, Intelligence, Fires, Protection, Sustainment and Network Operations). These efforts are essential to manage and share C2 data across applications, providing commanders with a common operating picture and the information required to make quick, accurate decisions in any environment. The Data Layer will leverage best business practices for iterative prototyping and Development, Security, and Operations (DevSecOps) with an emphasis on AI/ML capabilities.</p>

**Note**

Project EK9 is not a new start, but a realignment of funding representing key capabilities that will continue under the Next Generation Command and Control (NGC2) Application Layer efforts.

This funding supports the Army NGC2 initiative to modernize the Command and Control (C2) systems Applications Layer. Project EK9 includes realigned funding and requirements from mission command systems, previously siloed by warfighting function and product. Project realignments are detailed in R2 B Program Change Summary (Change Summary Explanation) of this form.

**A. Mission Description and Budget Item Justification**

This funding line supports the NGC2 initiative to modernize C2 systems. NGC2 is one of the Army's highest modernization priorities and will enhance the ability to conduct multi-domain operations by integrating advanced technologies, improving interoperability, and increasing the speed and accuracy of decision-making processes. This funding line specifically supports the Applications Layer efforts within NGC2. The Applications Layer supports the delivery of warfighting function (WfF) applications and Unified Network Operations. WfF applications (e.g. Command and Control, Information Advantage, Movement and Maneuver, Intelligence, Fires, Protection, Sustainment and Network Operations) will be delivered to the specifications defined by the Data Layer (Project EJ6).

Project EK9 also consolidates and further refines Network Operations (NetOps) tools that are key to enabling applications in a data-centric network with increased efficiency in overall network management. Warfighting function applications will operate in conjunction with the Data Layer to provide seamless mission command from the enterprise to the tactical edge, leveraging cutting edge available commercial technologies. This unified approach will dramatically improve the user experience for warfighters, enabling faster decision-making and ultimately increasing lethality.

FY 2026 funding supports the development and seamless integration of critical WfF applications. This investment will focus on development/integration of WfF applications spanning Command and Control, Movement and Maneuver, Intelligence, Fires, Protection, Sustainment, and Network Operations and delivering those capabilities within a common user interface (NGC2). A key operational takeaway from this funding will be a demonstrably improved ability to rapidly plan, coordinate, and execute multi-domain operations, providing a decisive advantage on the battlefield.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
<p><b>Description:</b> Development and integration of critical warfighting function (WfF) applications into a modernized Command and Control (C2) systems Applications Layer, executed within a competitive environment by contracting with multiple industry teams to integrate innovative and iterative capabilities utilizing a CI/CD approach. Effort includes refinement of Unified Network Operations tools. The C2 Applications Layer will be supported by a flexible, open architecture and modular C2 Data Layer.</p> <p><b>FY 2026 Base Plans:</b> Funding will be used to deliver a modernized C2 Applications Layer that includes critical warfighting function (WfF) applications. Continuous competition via future Commercial Solutions Openings (CSO) will onboard new technologies through integration of innovative and iterative capabilities while maintaining momentum from the Project Convergence Capstone 5 exercise, with a division-scaled prototype capability to be demonstrated at Project Convergence Capstone 6 in FY 2026. Efforts include transition and integration of existing mission command system efforts into new NGC2 capabilities.</p> <p><b>FY 2025 to FY 2026 Increase/Decrease Statement:</b> Increase represents Army funding prioritization and realignment in support of capability development of a modernized C2 Applications Layer under the NGC2 initiative and development efforts that utilize continuous competition and a CI/CD approach.</p>						
<p><b>Title:</b> C2 Applications Test/Evaluation/Validation/Verification (TEVV)</p> <p><b>Description:</b> The test strategy will focus on continuous verification and validation using modeling and simulation in both developmental and operational environments to assess Safety, Suitability, Supportability, Survivability and Sustainability. This will include iterative technical evaluations including Soldier Touch Points (STPs), and continuous embedded integration with users aligned to the Human Systems Integration (HSI) plan to improve the Next Generation Command and Control (NGC2) Application Layer and user interface.</p> <p><b>FY 2026 Base Plans:</b> Ramp up testing processes and capabilities and execute a variety of TEVV activities, including Logistics, Limited User Assessment(s), Cyber Tabletop Exercise (CTTX), Cybersecurity Vulnerability Assessment (CVA), Adversarial Cybersecurity Developmental Test (ACDT), Cooperative Vulnerability and Penetration Test (CVPA), and After Actions.</p> <p><b>FY 2025 to FY 2026 Increase/Decrease Statement:</b></p>		-	-	12.900	-	12.900

Increase represents Army funding prioritization and realignment in support of C2 Application Layer capability development and reflects ramp up and execution of TEVV to evaluate and validate development activities.						
<b>Title:</b> C2 Applications Program Management  <b>Description:</b> Program management includes matrix and contractor personnel to support management of program execution, major events, reporting, funding execution, and contract management. Includes participation in program planning and Integrated Product Team meetings with key stakeholders including the Command and Control (C2) Cross Functional Team (CFT), and Command, Control, Communications, Computers, Cyber, Intelligence, Surveillance and Reconnaissance (C5ISR) Center.  <b>FY 2026 Base Plans:</b> Funds personnel labor to support program management and execution for the C2 Applications Layer, including facilitation of continuous competition via future Commercial Solutions Openings (CSO). Includes assessment of cybersecurity compliance, research, program oversight, risk management and documentation.  <b>FY 2025 to FY 2026 Increase/Decrease Statement:</b> Increase represents Army funding prioritization and realignment in support of the C2 Applications Layer capability development and reflects program management level of effort for development approach.		-	-	12.066	-	12.066
<b>Title:</b> UNO Product Development  <b>Description:</b> Unified Network Operations (UNO) Product Development provides software development for Army's Next Generation Command and Control (NGC2) Tactical Network Operations (NetOps) and Tactical Identity, Credential, and Access Management (ICAM) capabilities. UNO Middle Tier Acquisition (MTA) Rapid Prototyping provides Network Planning and Network Management capabilities to support weapon systems (e.g., tactical radios, Satellite Communications (SATCOM), Line of Sight (LOS), and Beyond Line of Sight (BLOS)) for Integrated Tactical Network (ITN) users. Network Planning includes developing automated analysis processes, enhancing planning accuracy, and simplifying configuration operations. Network Management includes managing network status and monitoring capabilities to enable users to adjust the network to meet mission requirements. Embedded training of the Network Planning and Network Management prototypes provides soldiers with a consistent look and feel of the applications. The MTA prototype development serves as a risk reduction effort (RRE) designed to inform the initial proof of concept of critical planning and management functions. The lessons learned from the prototype activities will inform future design and may consider these prototypes for implementation as part of future solutions.		35.908	51.367	-	-	-

Exhibit R-2A, RDT&E Project Justification: PB 2026 Army			Date: June 2025			
Appropriation/Budget Activity 2040 / 5		R-1 Program Element (Number/Name) PE 0604818A / Army Tactical Command & Control Hardware & Software	Project (Number/Name) EK9 / TACTICAL NETWORK OPERATIONS AND MANAGEMENT			
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
<p>UNO Information Systems - Initial Capabilities Document (IS-ICD) requirements expand Army's Next Generation Command and Control (NGC2) Network Operations (NetOps) capabilities to provide the key components of the Unified Network (UN) across the Army. These components include streamlined and enhanced Network Planning and Device Configurations, Network Management and Monitoring tools, and enhanced security and data exchange capabilities, including identity, credential, and access management capabilities in support of Zero Trust. These components provide standardized, tailorable, and scalable capabilities across the UN.</p> <p>Army's Next Generation Command and Control (NGC2) is developing the planning, management, monitoring, security, operations, and maintenance capabilities as a fully integrated suite of Tactical Network Operations (NetOps) tools for tactical users, providing additional enhanced features for Artificial Intelligence (AI) and Machine Learning (ML), and distributed &amp; deployable at the point of need ICAM services for tactical users within all tactical echelons. Initial development provides prototypes of ICAM data repository capabilities, Identity Provider (IdP) / Multi-Factor Authentication (MFA), automates Active Directory (AD) account provisioning and deprovisioning, and provides access control capabilities based on Authoritative Attributes.</p> <p><b>FY 2025 Plans:</b> Product Development funds the competitive prototype development of Unified Network Operations (UNO) solutions.</p> <p>Prototype development of Lower-Tier Tactical (LTT) and Upper-Tier Tactical (UTT) capabilities serve as the foundational components of UNO including a Simplified User Interface (SUI), open network architectures, Application Program Interfaces (APIs) that enable access to core NetOps tools (e.g., planning, management, monitoring, security), core NetOps tools, operations and maintenance functions which enable plan/design, model and simulation, install, operate, maintain, sustain, and security of the network for tactical users. These capabilities are intended to be interoperable and integrated with future UNO components and support NetOps across the tactical network (e.g., tactical radios and waveforms, transmission systems and components, deployed nodes, network devices, and software).</p> <p>Prototype development of Tactical Identity, Credential, and Access Management (T-ICAM) capabilities will deliver Identity Provider (IdP) services, Multi-Factor Authentication (MFA), and automated provisioning/deprovisioning of access control leveraging identity attributes from Army Master Identity Directory (AMID) (e.g., Attribute Based Access Control)). These capabilities enable the use of multiple methods of authentication (e.g., Fast Identity Online 2 (FIDO2), MFA, etc.) and Active Directory (AD); multiple factors to verify Soldier identity</p>

	<u>Line Item</u>	<u>FY 2024</u>	<u>FY 2025</u>	<u>FY 2026</u> <u>Base</u>	<u>FY 2026</u> <u>OOC</u>	<u>FY 2026</u> <u>Total</u>	<u>FY 2027</u>	<u>FY 2028</u>	<u>FY 2029</u>	<u>FY 2030</u>	<u>Cost To</u> <u>Complete</u> <u>Total Cost</u>
<u>Remarks</u>											
In FY 2025, Unified Network Operations (UNO) BA9301 / B99418 provides the procurement funding to procure and deploy the UNO software releases developed under the Tactical Network Operations Management (TNOM) 0604818A / EK9 funding line.											
In FY 2024, Next Generation Command and Control (NGC2) received \$22.128M RDTE (BA-04) in support of NGC2 SWP Planning Phase (PP), funding supports NGC2 Application (EK9) and Data Layer (EJ6).											
In FY 2025, Next Generation Command and Control (NGC2) received \$18M RDTE (BA-04) in support of NGC2 SWP Planning Phase (PP), funding supports NGC2 Application (EK9) and Data Layer (EJ6).											
In FY 2026 and beyond, Unified Network Operations (UNO) BA9301 / B99418 provides the procurement funding to procure and deploy the UNO software releases developed under the Tactical Network Operations Management (TNOM) 0604818A / EJ6 and EK9 funding lines.											
D. Acquisition Strategy											
The Army is modernizing its Command and Control (C2) approach to secure battlefield superiority. Using modern systems engineering design approaches and industry best practices, the Army will deliver a horizontally integrated common software services framework for Army C2. The Army's modernization involves continuous improvements and integration of all network battlefield components, from transport and infrastructure to data and soldier- used applications.											
This effort focuses on development and integration of critical warfighting applications (including Command and Control, Movement and Maneuver, Intelligence, Fires, Protection, Sustainment, and Network Operations) within the Army's Next Generation Command and Control (NGC2) initiative. The Applications Layer is executed via a continuous integration and continuous delivery (CI/CD) software development approach utilizing a flexible, open architecture and modular data layer for iterative capability delivery.											
On September 9, 2024, the Army Acquisition Executive (AAE) approved the Next Generation Command and Control (NGC2) Software Acquisition Pathway (SWP) program Planning Phase (PP). The Army subsequently aligned its contract strategy with OSD guidance to utilize Commercial Solutions Openings (CSOs) and Other Transaction Authority's (OTAs). The acquisition plan involves enabling a competitive environment by contracting with multiple teams to integrate innovative capabilities while maintaining momentum from Project Convergence Capstone 5 (PCC5) exercise, with a prototype capability to be demonstrated at Project Convergence Capstone 6 (PCC6) in FY26. Initiation of the NGC2 SWP Execution Phase is scheduled for 3QFY26.											
This project supports the continuous integration and delivery of the C2 Applications Layer, which provides critical WfF applications and unified network operations capabilities within NGC2, ultimately empowering commanders with a common, integrated operating picture that enables faster decision-making and improved coordination across the battlefield.											

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Army		Date: June 2025
Appropriation/Budget Activity 2040 / 5	R-1 Program Element (Number/Name) PE 0604818A / Army Tactical Command & Control Hardware & Software	Project (Number/Name) EK9 / TACTICAL NETWORK OPERATIONS AND MANAGEMENT
<p>On June 4, 2024, the AAE approved the Outcome Determination of the Unified Network Operations (UNO) Middle Tier Acquisition (MTA) Rapid Prototyping (RP) effort, enabling the formal transition into multiple follow-on SWP. The Acquisition Decision Memorandum (ADM) was signed 07 November 2024. The AAE authorized the use of the SWP for these components - Lower-Tier Tactical (LTT) (July 5, 2023), Upper-Tier Tactical (UTT) (February 6, 2024), and Tactical - Identity Credentialing and Access Management (T-ICAM) (March 8, 2024). The program is currently executing the Planning Phase through competitive prototyping of Next Generation Command and Control (NGC2) Tactical Network Operations (NetOps) and Tactical ICAM capabilities (FY24-FY26) and anticipates transitioning to the Execution Phase in FY26 pending AAE approval. The Execution Phase will leverage iterative development and Development, Security, and Operations (DevSecOps) principles for continuous integration / continuous development (CI/CD), and rigorous testing of new capabilities and software enhancements.</p>

## Note

M/HHCE is part of the Army Transformation Initiative.

## A. Mission Description and Budget Item Justification

Project EQ8, Mobile/Handheld Computing Environment (M/HHCE) enables situational awareness (SA) and command and control (C2) for dismounted combat forces through the Nett Warrior (NW) system. M/HH CE utilizes Government-owned Tactical Assault Kit (TAK) as a foundation for integrating a wide array of functional software, such as UAV planning/control, casualty care and logistics. Future versions of NW and TAK will form the SA/C2 baseline for Next Gen C2 dismounted forces. The NW system provides leaders electronic real-time information on friendly positions; information about enemy activity and movement; navigational data and map imagery; a collaborative planning tool; and other mission related graphics which effectively puts the power of the entire Army tactical network in the hands of the dismounted leader.

Nett Warrior (NW) and Soldier Borne Mission Command (SBMC) are the instantiation of the M/HHCE and comply with the technical standards documented by the M/HHCE and provide the dismounted common computational platform for other products relevant to dismounted Soldiers. Through compliance with the M/HHCE, software applications from other programs are integrated with the NW and SBMC systems, reducing the need for duplicate hardware resulting in reduced Soldier Load. The M/HHCE is directly aligned to the Army Network Modernization Strategy Line of Effort (LOE) 1 (Unified Network). M/HHCE also supports the Army Network Modernization Strategy LOE 2 (Common Operating Environment). These efforts are aligned to the Army's Tactical Network Capability Set development and fielding plans by utilizing (1) interoperable data, message, and waveforms, (2) sensors and applications that enable operations across domains and automated tools to aid decision-making and (3) integration with Joint C4ISR and strike capabilities. NW leverages commercial smart phone devices and secure Army tactical radios to provide the dismounted leader an integrated mission command and situational awareness capability for use during combat operations. NW applied feedback from conventional and Special Operations units to procure and implement Secret and Secure But Unclassified (SBU) networking equipment for Brigade Combat Teams (BCTs) and the Security Force Assistance Brigades to enable faster, more flexible Mission Command data exchanges with Joint and Coalition forces while maintaining the existing integrated mission command capability with Mounted CE (e.g., Joint Battle Command - Platform (JBC-P) or Mounted Mission Command (MMC)) system. NW uses Commercial-Off-The-Shelf (COTS) and Non-Developmental Item (NDI) computational & communication equipment to support Next Gen C2 and enable faster and more accurate decision making in fights at the tactical level.

Requirements for the M/HHCE are established in the Army Requirements Oversight Council (AROC) approved COE Information Systems Initial Capability Document (IS ICD), the M/HHCE Requirements Definition Package (RDP), and the NW Capability Development Document in lieu of Capability Production Document. M/HHCE is a signature effort under the Network CFT (Common Operating Environment focused on dismounted Soldier). The Network CFT is one of the six Army modernization

Exhibit R-2A, RDT&E Project Justification: PB 2026 Army			Date: June 2025			
Appropriation/Budget Activity 2040 / 5		R-1 Program Element (Number/Name) PE 0604818A / Army Tactical Command & Control Hardware & Software	Project (Number/Name) EQ8 / Mobile/Handheld Computing Environment (M/HHCE)			
priorities per Army Modernization Strategy 2019. M/HHCE employs a Developmental and Security Operations (DevSecOps) process to incrementally develop capability over time to satisfy requirements and meet fielding decisions. FY 2026 funding will continue DevSecOps activities to incorporate new capability and enhancements based on user feedback and address provisioning of the Windows operating system in the Watchtower mobile device management system. Additionally, FY 2026 funding provides for integration/test equipment and risk reduction events, as well as funding to initiate Artificial Intelligence/Machine Learning (AI/ML)-based analytics into the Nett Warrior ecosystem and develop tools within the Intra-Soldier Wireless environment. FY 2026 funding will also go to supporting product integration in pursuit of the Situational Awareness Strategy (SAS). Funding also pursues Artificial Intelligence/Machine Learning (AI/ML) and Human-Machine Interfaces (HMI) through its On-Body Compute hardware and software to control autonomous systems.						
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
Title: Test and Evaluation		1.241	0.450	6.648	-	6.648
Description: Test and evaluation efforts include the planning and conduct of combined COE events with Command Post/Mounted Computing Environment, Software Acceptance Testing, System Integration Events, Risk Reduction Events, Security Penetration Testing and Operational Assessment like annual Army Expeditionary Warrior Experiment (AEWE) to gain Soldier Touch point feedback on new capabilities.						
FY 2025 Plans: Conduct NW testing at the Electronic Proving Ground (EPG) for DOCK Ultra and Unmanned Aerial System (UAS) integration with the NW system.						
FY 2026 Base Plans: Conduct NW developmental testing and technical verification, including third-party evaluations, to assess new technologies and systems. Support NW as a baseline Next Gen C2/mobile CE system for the warfighter by performing electromagnetic interference testing, environmental testing, system of system/interoperability testing and information assurance (IA) penetration and prevention testing on new commercial smart devices, software, and accessories. Support annual DevSecOps operational assessments to gather Soldier feedback on emerging capabilities. Provide support for Army Modernization test events by supplying equipment and deploying field personnel to integrate systems, participate in capability demonstrations, operate and troubleshoot equipment, and implement necessary fixes. Begin HMI integration of identified Unmanned Aerial Systems (UAS) and Unmanned Ground Systems (UGS) with NW and universal controllers.						
FY 2025 to FY 2026 Increase/Decrease Statement: FY2026 increase due to ramp up of efforts to support NGC2, Transformation in Contact (TiC), and other Army Modernization Test Events. In addition, the program conducting testing to support HMI initiation from FY25

Appropriation/Budget Activity 2040 / 5	R-1 Program Element (Number/Name) PE 0604818A / Army Tactical Command & Control Hardware & Software	Project (Number/Name) EQ8 / Mobile/Handheld Computing Environment (M/HHCE)
<p><b>D. Acquisition Strategy</b></p> <p>To capitalize on commercial industry's investment in advanced smart device technology as well as innovation and changes within Army, Nett Warrior (NW) and Soldier Borne Mission Command (SBMC) require annual RDT&amp;E funding for integration and evaluation of new technology. Through this process and at low cost, the Army is able to integrate and evaluate for combat utility the hundreds of millions spent in product development by the major commercial device manufactures. The NW program provides situational awareness and mission command to dismounted combat leaders through secure smart devices, a central power source, cables and the Next Generation Command and Control (C2). NW system is currently the central element within the Mobile Handheld Computing Environment (Mobile HHCE) that other programs host their software. The Mobile HHCE is one of the six computing environments within the Army Common Operating Environment. NW and SMBC fund development and evaluation of new technology and software integration through a combination of competitively awarded contracts and Other Transaction Authorities (OTAs). Various existing follow on procurement contracts are utilized to procure a combination of COTS and Government Off The Shelf (GOTS) equipment to include supporting services. Now in production, NW seeks operational feedback and uses the DevSecOps process to identify and implement new capabilities. M/HHCE standards are updated annually under the M/HHCE governance process.</p>

**A. Mission Description and Budget Item Justification**

This funding supports the Army's Next Generation Command and Control (NGC2) initiative to modernize Command and Control (C2) systems, Infrastructure layer.

Command posts provide locations from which commanders, assisted by their staffs, command operations and integrate/synchronize combat power to accomplish missions across the range of military operations. Commanders organize mission command systems into command posts based on mission requirements and the situation that will best assist them in exercising command and control of assigned and attached forces. Command post survivability is vital to mission success.

Depending on the threat, command posts need to remain small and highly mobile, especially at echelons below Division. Command posts are easily acquired and targeted by our adversaries when concentrated. Command post survivability is increased via dispersion, reduced size, redundancy, mobility, as well as camouflage and concealment. Command post survivability is further enhanced via dismounted operations that can take advantage of cover or shielding by terrain features or urban structures

FY2026 funding supports modernization efforts of command post capabilities, with a focus on continuous improvements for on the move operations, modular command posts, and survivability. Funding also provides for safety testing, logistical support and program management.

**B. Accomplishments/Planned Programs (\$ in Millions)**

	<b>FY 2024</b>	<b>FY 2025</b>	<b>FY 2026 Base</b>	<b>FY 2026 OOC</b>	<b>FY 2026 Total</b>
<b>Title:</b> Product Development	1.978	-	6.077	-	6.077
<b>Description:</b> Includes the costs for design/integration/fabrication and prototyping of command post platforms. These prototypes address capability gaps identified in current Army Command Post formations. Also includes equipment and ancillary items necessary to prototype a distributed command post capability.					
<b>FY 2026 Base Plans:</b> Evolve design for "On The Move Command Post" to enhance capabilities through increased wireless capability, mobility, functionality, scalability, and set conditions to support the Next Generation Command and Control design.

D. Acquisition Strategy											
Effective with the 11 Feb 2025 Acquisition Decision Memorandum, Command Post Integrated Infrastructure (CPI2) was renamed to Command Post Modernization (CPMod). This funding line supports Army NGC2 initiative to modernize C2 systems, Infrastructure layer.											
The Army's command posts are modernizing to be more flexible, iterative, and On-The Move (OTM). Commanders want modularity and the ability to change and adapt the command post based on their assigned mission set. Future Command Post improvements will incorporate a combination of emerging and existing innovations, such as enhanced on-the move and voice command functionalities. This approach will enable the Army to seamlessly update the capabilities of existing units without requiring equipment downtime, ensuring continuous operational readiness.											
The C2 Fix Directed Requirement provides the authority to proceed with the development of capabilities to enhance the command post's modularity, scalability, and mobility, allowing for more flexible and adaptable operational configurations. CPMod development efforts are focused on enhancing capabilities to establish a robust infrastructure supporting advanced networking, communications, and electronic signature management.											
The Army continues to develop innovative solutions to address mobile and flexible command post requirements.

**A. Mission Description and Budget Item Justification**

Project E10: The FY2026 request for Sentinel includes \$18,853 thousand of discretionary and \$14,000 thousand of mandatory (reconciliation) for a total of \$32,853 thousand. The discretionary funds will support enhancements, upgrades, and continued testing of the Army Modernization Priorities in support of the Sentinel Radar programs and will provide for an incrementally fielded Integrated Air and Missile Defense Fire Control System/capability for the composite Army Air and Missile Defense Brigades. The mandatory funds will develop and implement new signal processing techniques and waveforms to enhance Electronic Attack and Electronic Protect techniques based on the evolving threat, further enhancing radar survival and effectiveness in contested environments. Further information for this reconciliation request is provided in Section 20003 (Missile Defense) of the Reconciliation Exhibit. The Sentinel systems are a key component of the Army Integrated Air and Missile Defense (AIAMD) architecture, providing critical air surveillance of the forward areas.

Project PS1: The FY2026 request for the Army Long-Range Persistent Surveillance (ALPS) includes \$34,373 thousand of discretionary and \$4,000 thousand of mandatory (reconciliation) for a total of \$38,373 thousand. The discretionary funds will support the Army Long-Range Persistent Surveillance (ALPS) sensor, which is a persistent, passive air surveillance sensor system. ALPS capabilities include long-range, 360-degree surveillance against conventional fixed wing and rotary wing aircraft, UAS, and cruise missiles. ALPS supports tactical to strategic operations via its capability to connect with multiple Army and Joint Command and Control systems including the Integrated Fire Control Network (IFCN). The mandatory funds will develop Fixed Site capability for defense of the homeland. Further information for this reconciliation request is provided in Section 20003 (Missile Defense) of the Reconciliation Exhibit. The ALPS program tasks include all programmatic and engineering activities needed to modernize systems currently supporting multiple Combatant Commands and design/development effort to provide a passive capability to Army Air and Missile Defense forces in accordance with the requirements in the Capability Development Document (CDD).

The total program element FY2026 request is \$53,226 thousand of discretionary and \$18,000 thousand of mandatory reconciliation for a total of \$71,226 thousand. Further information for this reconciliation request is provided in Section 20003 (Missile Defense) of the Reconciliation Exhibit.

The FY 2026 request was reduced by \$0.117 million for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative."

**A. Mission Description and Budget Item Justification**

The FY 2026 request for Sentinel includes \$18,853 thousand of discretionary and \$14,000 thousand of mandatory (reconciliation) for a total of \$32,853 thousand. The discretionary funds will be used to support enhancements, upgrades, and continued testing of the Army Modernization Priorities in support of the Sentinel Radar programs and will provide for an incrementally fielded Integrated Air and Missile Defense Fire Control System/capability for the composite Army Air and Missile Defense Brigades. The mandatory funds will develop and implement new signal processing techniques and waveforms to enhance Electronic Attack and Electronic Protect techniques based on the evolving threat, further enhancing radar survival and effectiveness in contested environments. Further information for this reconciliation request is provided in Section 20003 (Missile Defense) of the Reconciliation Exhibit. The Sentinel systems are a key component of the Army Integrated Air and Missile Defense (AIAMD) architecture, providing critical air surveillance of the forward areas.

The Sentinel A4 utilizes Active Electronically Scanned Array (AESA) technology that is a ground-based sensor system designed to locate, identify and track Cruise Missiles, Fixed-Wing and Rotary-Wing Aircraft, Unmanned Aircraft Systems and Rocket, Artillery, and Mortar (RAM) projectiles. The multi-mission Sentinel A4 system will provide 360-degree surveillance and tracking with the ability to handle multiple simultaneous threats arriving from different azimuths.

The Sentinel A3 consists of a trailer mounted radar with its prime mover, generator, identification Friend or Foe (IFF) system and Forward Area Air Defense Command, Control and Intelligence (FAAD C2I) systems interface. The Sentinel A3 provides persistent surveillance and fire control quality data on Army and Joint networks through external C2 platforms enabling protection of U.S. and coalition forces as well as critical geo-political assets against Cruise Missiles (CM), Fixed-Wing, Rotary-Wing Aircraft and Unmanned Aircraft System (UAS) threats.

• WK5057: Sentinel Mods	161.886	171.436	462.010	-	462.010	-	-	-	-	-	-	
Remarks												
These programs are an integral part of the Army Integrated Air and Missile Defense (AIAMD) architecture.												
D. Acquisition Strategy												
The Sentinel A4 modification was competitively awarded to Lockheed Martin as a Fixed Price Incentive Firm (FPIF) contract to develop a modified Sentinel with a new Active Electronically Scanned Array (AESA) antenna.												
The Sentinel A3 and its predecessors were procured from Raytheon as a non-developmental item. The U.S. Government does not have adequate data rights for the Sentinel A3 and its predecessors; therefore no other contractor has the technical ability to modify the Sentinel A3 radar or Sentinel A3 software.												
The Sentinel programs are a component of an integrated fires development effort that includes survivability, resiliency, and effectiveness improvements against advanced threats from near-peer adversaries. These efforts include integration with an evolving common fires mission command, common development tools and processes, and annual test and evaluation to provide data to support program assessments and progress toward closure of performance gaps.

**A. Mission Description and Budget Item Justification**

The FY2026 request for ALPS includes \$34,373 thousand of discretionary and \$4,000 thousand of mandatory (reconciliation) for a total of \$38,373 thousand. The discretionary funds will support the Army Long-Range Persistent Surveillance (ALPS) sensor, which is a persistent, passive air surveillance sensor system. ALPS capabilities include long-range, 360-degree surveillance against conventional fixed wing and rotary wing aircraft, UAS, and cruise missiles. ALPS supports tactical to strategic operations via its capability to connect with multiple Army and Joint Command and Control systems including the Integrated Fire Control Network (IFCN). The mandatory funds will develop Fixed Site capability for defense of the homeland. Further information for this reconciliation request is provided in Section 20003 (Missile Defense) of the Reconciliation Exhibit.

The ALPS program was started as an urgent capability in response to multiple Combatant Commands identified operational needs. The ALPS program tasks include all programmatic and engineering activities needed to modernize systems currently supporting multiple Combatant Commands and design/development effort to provide a passive mobile capability to Army Air and Missile Defense forces.

In FY 2025, Project PS1 /Army Long Range Persistent Surveillance (ALPS) was a new effort realigned within PE 0604820A / Radar Development. Funding realigned from PE 0604741A / Air Defense Command Control and Intelligence - Eng Dev, Project 126 /PEO Electronic Protect for the design, development, integration, and test of ALPS.

GF5: General Fund Enterprise Business System	-	16.011	1.995	-	-	-	-	-	-	-	-	-

**A. Mission Description and Budget Item Justification**

This Program Element (PE) supports the General Fund Enterprise Business System-Sensitive Activities (GFEBS-SA): GFEBS-SA is a National Security System (NSS) leveraging the GFEBS base system as the Army's core financial management system, certified by the Chief Financial Officer Council, to provide the same financial capabilities of GFEBS but on SIPR, with additional security features to protect national security information. GFEBS-SA was implemented to protect sensitive information and enable clean auditability, allowing the Army to process sensitive and classified financial transactions that cannot be processed in the fully-fielded GFEBS base system without compromising classified information, missions, or endangering soldiers. GFEBS-SA was developed and deployed as an essential financial program designed to enable the auditability that is needed to comply with the Chief Financial Officers (CFO) Act, the Federal Financial Management Improvement Act (FFMIA), and prevent compromise of data that could cause grave harm to U.S. forces. GFEBS-SA was fully deployed in 2020 to 3,000 users across 100 locations worldwide and processes Secret Collateral and below information. Services are capable of being upgraded throughout the life of the program in order to incorporate advances in best business practices and technology, and will modify capability to maintain a synchronized software baseline with the GFEBS base system to maintain efficiencies in capability enhancements, training documentation, and sustainment support. In FY 2021, GFEBS-SA received approval to proceed with entry into capability support (sustainment) and application capability support transitioned to Army Shared Services Center (ASSC). FY 2023 RDT&E funding supported continuous enhancements to the GFEBS-SA SIPR capabilities to ensure appropriate security measures are in place to protect sensitive financial data. GFEBS-SA RDT&E efforts have been rolled into GFEBS (GF5) therefore DV6 has no funding request beyond FY 2023.

General Fund Enterprise Business System (GFEBS): GFEBS is the Army's core financial management system for administering its General Fund. Full Deployment was reached in 2012 and the system is currently in the Capability Support (sustainment) phase of the Business Capability Acquisition Cycle, focused on modernization, cyber security, and system enhancements while also conducting capability enhancements to meet policy and deliver accurate Army financial information. GFEBS was implemented to fulfill the needs and enable the Army to comply with the Federal Financial Management Improvement Act, deployed to over 35,000 users across 200 locations worldwide. GFEBS was developed using a commercial off-the-shelf Enterprise Resource Planning system that is certified by the Chief, Financial Officer Council and provides six core financial functions (United States General Ledger (USGL), Cost Management, Funds Control, Payable Management, Real Property, Receivable Management and Reports).

FY 2025 Base dollars in the amount of \$1.995 million will continue to support enhancements, such as system upgrade in support interfaces to improve system performance, accountability, and auditability efforts. These funds will be used to meet OSD and Army data exchange, and interface requirements. The additional capability will support both compliancy to meet audit requirements and updated interfaces to replace sun-setting systems. GFEBS RDT&E funds capability enhancements designed to meet audit readiness standards and system changes as prioritized by the functional sponsor and user community through the Tactical Financial Information Council, a Senior Executive Service/General Officer-level board. The RDT&E funding will support the increase in mission performance and improvement of automated system processes and continue to support modernization efforts aligned with the Original Equipment Manufacturer's Systems Applications

# UNCLASSIFIED

<b>Appropriation/Budget Activity</b> 2040: <i>Research, Development, Test &amp; Evaluation, Army I BA 5: System Development &amp; Demonstration (SDD)</i>	<b>R-1 Program Element (Number/Name)</b> PE 0604822A / <i>General Fund Enterprise Business System (GFEBS)</i>
--	--

and Products (SAP) next generation capability. Activities include code de-customization, data enablement, and improved automated data access to prevent end of support for the current database and platform. Funds will also support acquisition trades and market research on alternatives for SAP based finance/logistics consolidation to evaluate potential efficiencies by reducing platforms and licenses.

GFEBS must take critical steps towards integration and implementation of the next generation of Enterprise Business Systems capabilities. This effort will address the obsolescence of existing SAP Enterprise Resource Planning (ERP) real property and financial management platforms that the vendor plans to sunset around FY 2032. GFEBS modernization work sets the conditions for development of a converged, post-modern Defense Business System that streamlines and integrates the Army's core business functions. The effort on the individual programs must consider benefits of consolidation.

GFEBS must identify redundant processes as candidates for business process re-engineering. Funding will support the 1) market research of Industry best practices, 2) Initiation of an Army Enterprise Development Environment to enable prototyping which reduces risk by aiding the requirements development. This environment includes: Cloud-hosted infrastructure, applications, and programs and tools, 3) government Program Management and Technical Service contractors needed to plan for and manage the initiation of the post-modern system implementation effort.

FY 2026 GFEBS has no RDT&E funding request.

<b>B. Program Change Summary (\$ in Millions)</b>	<b>FY 2024</b>	<b>FY 2025</b>	<b>FY 2026 Base</b>	<b>FY 2026 OOC</b>	<b>FY 2026 Total</b>

**A. Mission Description and Budget Item Justification**

GF5 - General Fund Enterprise Business System (GFEBS): GFEBS is the Army's core financial management system for administering its General Fund. Full Deployment was reached in 2012 and the system is currently in the Capability Support (sustainment) phase of the Business Capability Acquisition Cycle, focused on modernization, cyber security, and system enhancements while also conducting capability enhancements to meet policy and deliver a more accurate picture of Army financial awareness. GFEBS was implemented to fulfill the needs and enable the Army to comply with the Federal Financial Management Improvement Act, it is utilized by over 35,000 users across 200 locations worldwide. GFEBS was developed using a commercial off-the-shelf Enterprise Resource Planning system that is certified by the Chief, Financial Officer Council and provides six core financial functions (United States General Ledger (USGL), Cost Management, Funds Control, Payable Management, Real Property, Receivable Management and Reports).

FY 2025 Base dollars in the amount of \$1.995 million will continue to support increases in mission performance and improvement of automatized system processes, and additional audit-related enhancements. Continue efforts to support modernization efforts aligned with the Original Equipment Manufacturer's Systems Applications and Products (SAP) next generation capability, activities include code de-customization, data enablement, and improved automated data access to prevent end of support for the current database and platform. Funds will also support acquisition trades and market research on alternatives for SAP based finance/logistics consolidation to evaluate potential efficiencies by reducing platforms and licenses.

GF5 has no FY2026 RDT&E funding request.

	<b>FY 2024</b>	<b>FY 2025</b>	<b>FY 2026</b>
<b>Title:</b> Capability Enhancement	16.011	1.995	-
<b>Description:</b> Capability enhancements provide changes to the system that are needed to update the infrastructure to meet system requirements and best practices, and to support evolving statutory and regulatory requirements. The capability enhancement initiatives are needed to increase the GFEBS capability and performance to maintain compliance with Federal Financial Management Improvement Act (FFMIA), Business Enterprise Agency (BEA), Standard Financial Information Structure (SFIS) requirements, and Yellow Book auditability. These requirements are established and prioritized through a General Officer (GO)/Senior Executive Service (SES)-level Tactical Financial Information Council and Functional Governance Board.

• OMA - GFEB APE 438001000 / 5T0: GFEBS OMA	52.290	54.929	68.486	-	68.486	-	-	-	-	-	-
<b>Remarks</b>											
OMA dollars include funding for both GFEBS and GFEBS-SA programs. OMA-funded support includes cloud hosting, software/hardware maintenance, capability support, Audit Readiness & Remediation, and capability enhancements.											
<b>D. Acquisition Strategy</b>											
GFEBS is currently in the Capability Support (sustainment) phase as specified in DoDI 5000.75. On 15 January 2018, the responsibility for system support of the GFEBS system transitioned from the original developer contract to a contract created to focus more on sustainment support and cost control. The current sustainment contract provides specific contracting methodologies to track all capability support functions as well as all the system enhancement requirements as set forth by the user community through the Tactical Financial Information Council; a Senior Executive Service/General Officer-level board that prioritizes user needs. Many of these enhancements require RDT&E funding as determined through a set of established business rules.											
Capability Support functions of all prioritized system enhancements for GFEBS transitioned to Army Shared Services Center in 1Q FY 2022.

## **A. Mission Description and Budget Item Justification**

A portion of this funding line is a key enabler of the Army Modernization Priorities in support of the Small Unit Power (SUP) program.

Project EY2 - Integrated Soldier Power Data System - Core (ISPDS-C): Includes power and data managing/distribution devices, cutting-edge energy storage solutions, and power scavenging devices. These capabilities fill the power and energy gaps created by the increase in mission essential, Soldier portable power consumers, such as heads up displays, situational awareness displays, global positioning systems, weapon sensors, radios, night vision systems, and other devices. This project line develops power sources and power management solutions for the individual Soldier and squad for use in all operating environments. This project develops and evaluates capabilities to fill the power and energy requirements for critical Network Baseline 4.0 Soldier worn systems to include tactical radios, assured position navigation and timing, Next Generation Squad Weapon, Nett Warrior, Enhanced Night Vision Goggle (all variants, including Binocular), and the Integrated Visual Augmentation System. ISPDS-C systems will enable dismounted Soldiers and squads to execute their missions more efficiently, independently, for longer durations and with fewer battery resupplies while reducing the logistical and physical burden associated with moving fuel and batteries. This project also develops and integrates vehicular on-the-move charging.

Project EY4 - Universal Battery Charger (UBC): Fills the power and energy gap created by the increase in mission essential, Soldier portable power consumers, by providing a variety of charging solutions capable of providing power to handheld communication devices and military batteries to support mounted and dismounted formations. The UBC is suited for mounted and dismounted operations at the company level and below in multi-domain and austere operating environments. The system can draw power from wall outlets, vehicle power, generators, and solar power sources. The UBC enables dismounted Soldiers to execute their missions with fewer battery resupplies, thus reducing the logistical burden associated with moving fuel and batteries. The UBC capability allows dismounted Soldiers to operate independently for longer missions. The UBC fills the power and energy gap associated with bulk charging.

Project FK4 - Soldier Borne Sensor (SBS): The SBS is a small unmanned aerial vehicle. The SBS provides a near term solution to three Army War-fighting Challenges at the Infantry Squad level: develop situational understanding, conduct air-ground reconnaissance, and conduct joint combined arms maneuver. The system is simple

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Army			Date: June 2025			
Appropriation/Budget Activity 2040: Research, Development, Test & Evaluation, Army I BA 5: System Development & Demonstration (SDD)		R-1 Program Element (Number/Name) PE 0604827A I Soldier Systems - Warrior Dem/Val				
to deploy and use to support the squad leader's decision-making process. The system allows Soldiers to obtain local situational awareness and understanding of their immediate surroundings while remaining in covered or concealed positions. The SBS program will be procured through multiple phases. We will use the funding in this project to develop, integrate, and qualify additional capabilities for each phase. Funding in this project aligns with the Army's priorities in support of the National Defense Strategy.						
Project LS2 - Lethal Semi-Autonomous Aerial Unmanned System - Engineering Development: This project focuses on engineering and material development in support of the acquisition program for an enduring capability with Low Altitude Strike and Stalk Ordnance (LASSO) CDD which was approved in AUG24. Infantry Brigade Combat Teams (IBCTs) lack adequate organic capabilities at echelon to apply immediate, point, long range, and direct fire effects to destroy tanks, light armored vehicles, hardened targets, defilade, and personnel targets, while producing minimal collateral damage in complex terrain in all environmental conditions. Development will focus on the Fire Control Stations (FCS), All-Up Round (AUR), and System Architecture. Develop technology for incorporation into the CDD update for the Program of Record and conduct tech enhancements from current global conflicts. The funding contained within this budget line and project will be used to conduct evaluations of technologies and capabilities in the loitering munitions capability space, hardware and system architecture engineering and integration activities, and testing and evaluation activities. Realignment starting FY 2026 to Lethal Semi-Autonomous Aerial Unmanned Sys-Eng Dev (0609345A/A49) funding line.						
S65 - Soldier Power: Soldier Power enables dismounted Soldiers to efficiently execute missions for longer durations by reducing the logistical burden associated with fuel and primary (disposable) batteries. Platoon Power Generation (PPG) - PM E2S2: This project supports the demonstration and development of a PPG. The Small Unit Power (SUP) PPG will provide small units with sufficient portable power to sustain Modified Table of Organizational Equipment (MTOE) unit power demand in support of 48 to 72 hour missions. It will be used for charging batteries and powering various types of Army communications and electronics devices.						
The FY 2026 request was reduced by \$1.427 million for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative."

Remarks

D. Acquisition Strategy

Pursue a variety of Soldier power products under full and open competition. Initiatives range from Commercial-Off-The-Shelf (COTS) solutions to developmental efforts. The type of solicitation depends on the maturity of the technology. The power initiatives will be evaluated through scheduled lab and/operational test and evaluation events, and if successful, selected for procurement and subsequent fielding and sustainment. The acquisition strategy varies by product. For example, the CWB acquisition strategy consists of two phases: Phase one includes the purchase and evaluation of test articles. Phase two establishes an Indefinite Delivery Indefinite Quantity (IDIQ) contract through the Army Contracting Command (ACC) which maximizes competition to transition to production.

**A. Mission Description and Budget Item Justification**

Project FK4 - Soldier Borne Sensor (SBS): The SBS is a small unmanned aerial vehicle. The SBS provides a near term solution to three Army War-fighting Challenges at the Infantry Squad level: develop situational understanding, conduct air-ground reconnaissance, and conduct joint combined arms maneuver. The system is simple to deploy and use to support the squad leader's decision-making process. The system allows Soldiers to obtain local situational awareness and understanding of their immediate surroundings while remaining in covered or concealed positions. The SBS program will be procured through multiple phases. The program will develop, integrate, and qualify additional capabilities for each phase. Funding in this project aligns with the Army's priorities in support of the Army Transformation Initiative (ATI).

Realignment starting FY2026 to Soldier Borne Sensor (0609345A/A50) agile funding line.

**A. Mission Description and Budget Item Justification**

Project LS2 - Lethal Semi-Autonomous Aerial Unmanned System - Engineering Development: This project focuses on engineering and material development in support of the acquisition program for an enduring capability with Low Altitude Strike and Stalk Ordnance (LASSO) CDD which was approved in AUG24. Infantry Brigade Combat Teams (IBCTs) lack adequate organic capabilities at echelon to apply immediate, point, long range, and direct fire effects to destroy tanks, light armored vehicles, hardened targets, defilade, and personnel targets, while producing minimal collateral damage in complex terrain in all environmental conditions. Development will focus on the Fire Control Stations (FCS), All-Up Round (AUR), and System Architecture. Develop technology for incorporation into the CDD update, for the Program of Record, and conduct tech enhancements from current global conflicts. The funding contained within this budget line and project will be used to conduct evaluations of technologies and capabilities in the loitering munitions capability space, hardware and system architecture engineering and integration activities, and testing and evaluation activities.

Realignment starting FY 2026 to Lethal Semi-Autonomous Aerial Unmanned Sys-Eng Dev (0609345A/A49) funding line.

**A. Mission Description and Budget Item Justification**

Platoon Power Generation - PM E2S2: This project supports the demonstration and development of Platoon Power Generation (PPG). PPG will provide small units with portable power to sustain Modified Table of Organizational Equipment (MTOE) unit power demand in support of 48 to 72 hour missions. It will be used for charging batteries and powering various types of Army communications and electronics devices. It will provide sufficient power to recharge and power all Platoon equipment and fulfill residual power gaps at the Squad and Soldier level. The generator will provide Platoon power for charging batteries when away from vehicles in all Brigade Combat Teams (Stryker, Armor and Infantry), Rangers and Special Forces in austere environments.

Funding for this program was changed from FY 2026 and beyond due to reprioritization of resources across the Army portfolio.

**B. Accomplishments/Planned Programs (\$ in Millions)**

	<b>FY 2024</b>	<b>FY 2025</b>	<b>FY 2026</b>
<b>Title:</b> S65-Platoon Power Generator	3.926	5.559	-
<b>Description:</b> Spark-ignited COTS Operational Life and Reliability Study (SCOLARS) will improve and increase Soldier-portable systems as a bridging solution, and utilization of open competition for development of fuel cell solutions. Maturation of technologies in lightweight power generation capabilities are needed to meet requirements and increase competition.			
<b>FY 2025 Plans:</b> Begin engineering, manufacturing, and development of fuel cell power generation capabilities meeting PPG requirements.			
<b>FY 2025 to FY 2026 Increase/Decrease Statement:</b> FY 2026 funding decrease due to reprioritization of resources across the Army portfolio.			
<b>Accomplishments/Planned Programs Subtotals</b>			-

Remarks											
D. Acquisition Strategy											
PEO CS/CSS Effort on the Platoon Power Generation - PM E2S2: Based on the delays and results of the Small Business Innovation Research (SBIR) Phase II contract from the Command, Control, Computers, Communications, Cyber, Intelligence, Surveillance, and Reconnaissance (C5ISR) Center in FY23, PM E2S2 will not conduct a SBIR Phase III action. In FY24, PM E2S2 will conduct the Spark-ignited COTS Operational Life and Reliability Study (SCOLARS) to improve and optimize modified spark-ignited Soldier-portable generators to support SUP Soldier Power bridging solutions. In FY25, PM E2S2 will complete SCOLARS improvement efforts to continue the bridging strategy for PPG.

## A. Mission Description and Budget Item Justification

This funding line is a key enabler of the Army Modernization Priorities in support of the Vehicle Protection Suite (VPS) program.

Current ground combat vehicle platforms and tactical wheeled vehicles lack the ability to effectively detect, track, divert, disrupt, neutralize, or destroy incoming direct or indirect fired threat munitions. Current solutions to defeat these threats, Explosive Reactive Armor (ERA) and Slat armor, do not provide preemptive or active protection and impose secondary blast hazards to crew, dismounted soldiers, and adjacent vehicles and equipment. The Suite of Vehicle Protection Systems will develop, mature and integrate solutions onto multiple ground combat vehicles and tactical vehicles to increase the protection of the Army's ground systems from both current and next generation direct or indirect fired threat munitions.

The Vehicle Protection Suite (VPS) Project (FE8) will design, mature, integrate, evaluate and field combinations of active, reactive, and passive protection capabilities and leverage both Horizontal Technology Integration (HTI) principles and the Modular Open System Architecture with the Army's Vehicle Protection System Base Kit (VBK) to develop tailored vehicle Survivability Sets specific to platforms that will mitigate existing protection gaps, allow for future technology insertion to mitigate and defeat evolving threats, and minimize the impact to the current capabilities hosted on Army ground combat and tactical vehicles. The protection capabilities will leverage technologies across a spectrum of survivability mechanisms including detection avoidance, threat detection, threat intercept and threat mitigation.

The FY 2026 request was reduced by \$0.183 million for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative."

B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Vehicle Protection System Base Kit Integration of Non-Developmental Items (NDI) and Developmental Technologies									49.762	32.616	24.871	
Description: VPS Base Kit (VBK) is a Modular Open Systems Architecture (MOSA) survivability systems controller and is the foundation for future hard kill and soft kill Active Protection Systems. The VBK will integrate with both Non-Developmental Items and developmental items. Through software and a MOSA design approach, the VBK enables tailored vehicle Survivability Sets specific to platforms that enable future technology insertion to detect, mitigate and defeat evolving threats.												
The Laser Warning Receiver (LWR) provides early threat detection to the vehicle crew through the VBK. The integration efforts includes qualification testing, installation kit design and development, logistics products, prototype manufacturing, and platform testing.												
FY 2025 Plans: Continue MOSA software development to support Laser Warning Receiver (LWR) integration, test and fielding efforts for ground combat vehicles and enable future hard kill and soft kill active protection systems integration with the VBK. On Armored Multi-Purpose Vehicle (AMPV) and Stryker, complete VBK with LWR integration through Critical Design Review. For Abrams and

HB6: <i>Mobile 155MM Howitzer</i>	-	5.000	-	-	-	-	-	-	-	-	-	-

**A. Mission Description and Budget Item Justification**

This program element encompasses engineering and manufacturing development for artillery weapons systems.

Project 516 is to modernize the field artillery to address obsolesce, improve performance and address emerging threats. The Self-Propelled Howitzer is an indirect fire weapon system with the ability of delivering accurate, long range, lethal and non-lethal cannon fires in support of both Combined Arms Maneuver (CAM) and Wide Area Security (WAS) operations. The Self-Propelled Howitzer and Ammunition Resupply Vehicle can be employed within any Brigade Combat Team formation to neutralize, suppress, or destroy enemy forces, while providing protected transport of a field artillery howitzer section on the modern battlefield.

This effort will include system usage and optimization studies, simulations, development engineering, Line Replacement Unit (LRU) prototype development and procurement and validation for incremental upgrades of field artillery.

Project DH7 supports the Howitzer Modernization. The US Army modernized howitzer will provide highly mobile, survivable, versatile, transportable, long range, lethal fires in support of Army Transformation Initiative. This project supports the Mobile Tactical Cannon Directed Requirement (MTC-DR) to provide an enhanced capability reducing emplacement and displacement times, increasing crew survivability and protection, providing greater mobility, and affords improved fire support capability for Field Artillery formations well beyond the capability of the current howitzer systems. Fiscal Year (FY) 2026 funding supports the enhancements, integration, and testing of system of systems to include, but not limited to, artillery weapon system, ammunition, and fire control systems to achieve desired firing range and lethal fires effects on targets, as necessary for Artillery unit operations.

Project HB6 supports the mobile howitzer program. The Mobile 155mm Howitzer is a Self-Propelled, 155mm Wheeled Howitzer that provides lethal, proactive counter-fire essential for the survivability of the maneuver formations and other close support fires as required. The Mobile Howitzer improves the Field Artillery Battalion's ability to maintain pace with its supporting maneuver formations and survive against responsive, counter-fire from near-peer threats with rapid displacement and emplacement times. The mobile howitzer will improve tactical mobility and system survivability compared to existing towed howitzer systems. Development efforts, prototyping and evaluations will focus on attributes such as improved emplacement and displacement times, driving speed, and crew protection capabilities, all without sacrificing lethality versus existing towed howitzer systems. Program activities focused on evaluation of multiple vendor mobile howitzer systems at United States proving grounds against system requirements. Evaluation will include safety testing, US ammunition compatibility testing, and assessment of mobility, survivability and transportability.

Artillery Systems - EMD is part of the Army Transformation Initiative.

**A. Mission Description and Budget Item Justification**

Project 516 is to modernize the field artillery to address obsolescence, improve performance and address emerging threats. The Self-Propelled Howitzer is an indirect fire weapon system with the ability of delivering accurate, long range, lethal and non-lethal cannon fires in support of both Combined Arms Maneuver (CAM) and Wide Area Security (WAS) operations. The Self-Propelled Howitzer and Ammunition Resupply Vehicle can be employed within any Brigade Combat Team formation to neutralize, suppress, or destroy enemy forces, while providing protected transport of a field artillery howitzer section on the modern battlefield.

This effort will include system usage and optimization studies, simulations, development engineering, Line Replacement Unit (LRU) prototype development and procurement and validation for incremental upgrades of field artillery.

**Note**  
Next Generation Howitzer is a new start within the Artillery Systems - EMD program in FY 2026.

Project DH7/ Howitzer Modernization is a new start in Fiscal Year (FY) 2026.

**A. Mission Description and Budget Item Justification**

Project DH7 supports the Howitzer Modernization. The US Army modernized howitzer will provide highly mobile, survivable, versatile, transportable, long range, lethal fires in support of Army Transformation Initiative. This project supports the Mobile Tactical Cannon Directed Requirement (MTC-DR) to provide an enhanced capability reducing emplacement and displacement times, increasing crew survivability and protection, providing greater mobility, and affords improved fire support capability for Field Artillery formations well beyond the capability of the current howitzer systems. Fiscal Year (FY) 2026 funding supports the enhancements, integration, and testing of system of systems to include, but not limited to, artillery weapon system, ammunition, and fire control systems to achieve desired firing range and lethal fires effects on targets, as necessary for Artillery unit operations.

**A. Mission Description and Budget Item Justification**

Project HB6 supports the mobile howitzer program. The Mobile Howitzer is a Self-Propelled, Wheeled Howitzer that provides lethal, proactive counter-fire essential for the survivability of the maneuver formations and other close support fires as required. The Mobile Howitzer improves the Field Artillery Battalion's ability to maintain pace with its supporting maneuver formations and survive against responsive, counter-fire from near-peer threats with rapid displacement and emplacement times. The mobile howitzer will improve tactical mobility and system survivability compared to existing towed howitzer systems. Development efforts, prototyping, system evaluations, and technology evaluations will focus on attributes such as improved emplacement and displacement times, driving speed, and crew protection capabilities, all without sacrificing lethality versus existing and future towed howitzer systems. Technology evaluations will leverage both 105mm and 155mm howitzers to understand benefits and limitations of potential enabling technologies.

## A. Mission Description and Budget Item Justification

The Army Human Resource System Project (099) contains the following programs: ArmyIgnitED Modernization managed by the Program Executive Office Enterprise (PEO Enterprise) and Regional Level Applications Software (RLAS) managed by United States Army Reserves (USAR).

1. ArmyIgnitED: In support of recruiting and retention for a more educated workforce, ArmyIgnitED is an Army Credentialing and Continuing Education Services for Soldiers (ACCESS) program, 24/7 virtual financial management portal, and decision-support tool for 1) Active Duty, US Army Reserves and Army National Guard Soldiers to request Tuition Assistance (TA); 2) Cadets to request scholarship payments and 3) Department of the Army (DA) Civilians and Apprentices to request professional development funds. As an enterprise system, ArmyIgnitED streamlines eligibility verification for higher education funds and increases efficiencies through automated processes. The system supports Soldiers, Scholarship Cadets, DA civilians and apprentices pursuing post-secondary educational goals and professional development objectives. Army education counselors use it to provide educational guidance; Career Program Managers and Training Managers use it to manage civilian training; and Academic Institutions use it to deliver degree and course offerings and to report user progress and degree completions for approximately 1.4 million Soldiers, Cadets and civilians. ArmyIgnitED includes an automated registration tool that enforces policies and procedures, serves as a financial feeder for automated financial transactions, tracks academic / training progress within the system, and provides visibility of financial management and regulatory compliance of enrollment processes. ArmyIgnitED is hosted in the Air Force's Amazon Web Services (AWS) GovCloud (Cloud One) environment.

FY 2026 Base Dollars in the amount of \$1.374 million will continue to support enhancements during the CI/CD phase. FY 2026 planned capability enhancements include: Interfaces with Army Career Tracker (ACT), Academic Degree Training (ADT), Joint Service Transcript (JST), Interactive Media Instruction (IMI), Education Center Testing, and Institutional Delivered Credential (IDC). This is a decrease of \$1.556 million from the FY 2025 requested level.

2. Regional Level Application Software (RLAS): RLAS is the United States Army Reserve Command (USARC) developed web-based application designed to assist Army Reserve Unit Commanders in accomplishment of critical day to day administrative tasks that support data information flow throughout all echelons Command levels within the Army Reserve. As the Army Reserve is geographically dispersed, RLAS efficiently leverages technology and remote execution of the following tasks: (1) Processes personnel actions to update USARC's official personnel database of record and maintain functionality of personnel actions not subsumed by IPPS-A; (2) Initiate, process, approve, publish and distribute Soldier Active Duty (AD) orders for Annual Training (AT), Active Duty Training (ADT), Active Duty Training School (ADTS), and Active Duty Orders Special Army Reserve (ADOS-RC); (3) Distribute, control, and execute Reserve Personnel Army (RPA) Appropriation for Request for Orders and Additional Drill Assembly processing; (4) Automated preparation and submission of Army Reserve Soldier AD Orders and Inactive Duty Training (IDT) payment requests; (5) Automated preparation and maintenance of Army Reserve Unit training schedules; and (6) Maintains reporting capabilities of critical personnel and resource management data for Army Reserve Commanders, USARC Staff, and Command echelons above and throughout USARC. RLAS is a Legacy Information System that operates as a Financial Feeder System to General Fund Enterprise Business Solution (GFEBS) official Accounting System of record.

Exhibit R-2A, RDT&E Project Justification: PB 2026 Army		Date: June 2025		
Appropriation/Budget Activity 2040 / 5	R-1 Program Element (Number/Name) PE 0605013A / Information Technology Development	Project (Number/Name) 099 / Army Human Resource System		
RLAS does not have a RDT&E funding request in FY 2026.				
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Title: ArmyIgnitED		-	2.930	1.374
Description: ArmyIgnitED is an IT financial management portal and decision support tool for Soldiers, Cadets, and civilians to request Tuition Assistance (TA) and Credentialing Assistance (CA), Cadets to request scholarship payments, and Army civilians to request training funds online, anytime, for classroom, distance learning, and college courses. When fully deployed, ArmyIgnitED will be used by approximately 1.4 million end users at both Continental United States (CONUS) and Outside the CONUS (OCONUS) locations. It will be the Army's single, next-generation, enterprise-wide TA, CA, and reimbursement management software system. ArmyIgnitED develops a more educated workforce which strengthens the recruiting and retention effort. ArmyIgnitED is the virtual financial management portal and decision-support tool for 1) Active Duty (AD), US Army Reserves (USAR), and Army National Guard (ARNG) Soldiers to request TA; 2) Cadets to request scholarship payments and 3) Department of the Army (DA) civilians and apprentices to request professional development funds. ArmyIgnitED is hosted in the Air Force (AF) Cloud One and leverages Automated Education Management System (AFAEMS) code base as a Government Off-the-Shelf (GOTS) solution. Development maximizes re-configuration of the Air Force Voluntary Education platform, AFAEMS, to the greatest extent possible and performing only minimal necessary modifications to ensure implementation of Army laws, policies, regulations, and directives (LPRDs).				
FY 2025 Plans: FY 2025 supports the Continuous Integration / Continuous Delivery (CI/CD) phase. Capability enhancements include: Recoupments & Refunds from students and academic institutions, which will make the system possible to reclaim millions of dollars in funding annually; Expanding the GFEBs interface to accommodate additional transactions and lead greater efficiency and auditability; A new interface with Defense Civilian Personnel Data System (DCPDS) as the authoritative data source to retrieve required data; Basic Skills Education Program (BSEP) entry capability to comply with Vocational educational Management Information System (VEMIS) reporting requirements; Desk Audits.				
FY 2026 Plans: FY 2026 will continue to support the CI/CD phase. Planned capability enhancements include: Interfaces with Army Career Tracker (ACT), Academic Degree Training (ADT), Joint Service Transcript (JST), Interactive Media Instruction (IMI), Education Center Testing, and Institutional Delivered Credential (IDC).				
FY 2025 to FY 2026 Increase/Decrease Statement: FY 2026 funding decreases by \$1.556 million due to reduced enhancement requirements during the CI/CD phase.				
Title: Regional Level Application Software (RLAS)		0.536	0.305	-

## UNCLASSIFIED

<b>Exhibit R-2A, RDT&amp;E Project Justification:</b> PB 2026 Army		<b>Date:</b> June 2025	
<b>Appropriation/Budget Activity</b> 2040 / 5	<b>R-1 Program Element (Number/Name)</b> PE 0605013A / <i>Information Technology Development</i>	<b>Project (Number/Name)</b> 099 / <i>Army Human Resource System</i>	
<b>B. Accomplishments/Planned Programs (\$ in Millions)</b>		<b>FY 2024</b>	<b>FY 2025</b>
<p><b>Description:</b> The United States Army Reserve (USAR) utilizes the Regional Level Application Software (RLAS) as an enterprise system for duty attendance, military pay, Soldier records management and training calendar management to access, transact, store and manage Soldier and unit data required to conduct synchronized USAR operations. Unlike the Army Active Component (AC) where Soldier military pay is centrally managed and input at the installation level, the USAR utilizes RLAS to manage and input decentralized Soldier pay transactions at the unit level. RLAS consists of three modules: Training, Personnel, and Resource Management. R&amp;D authority and funding will meet the USAR Staff Judge Advocate (SJA) and Office of the Secretary of Defense Judge Advocate General (OTJAG) opinions regarding defense information Technology (IT) system for R&amp;D activities. Necessary RLAS system development and system modifications include: 1) Integrated Pay and Personnel System - Army (IPPS-A) interface requirements; 2) implementing Microsoft .net Framework 4.5 standards; 3) implementing new Operating Systems (OS), system utilities and other technology products. Enhanced development and modification will improve RLAS system capabilities and bring RLAS into compliance with various Army Cyber Command (ARCYBER) and audit readiness requirements.</p> <p><b>FY 2025 Plans:</b> Integrated Personnel Pay System - Army (IPPS-A) release for Personnel did not fully subsume Legacy RLAS for Personnel requirements. Legacy RLAS will maintain these personnel components within the Personnel Module of RLAS to support until such time it is subsumed by IPPS-A. RLAS still maintains Resource Management modules and Training Module in support of RLAS Order Writer processing Annual Training (AT), School, and Active Duty Operational Support - Reserve Component (ADOS-RC) for Active Duty Orders; and Inactive Duty Training (Battle Assembly and Additional Drill Assembly types) for Army Reserve Soldiers. RLAS also provides support to USARC G8 Pay Management Division (PMD) to support Military Pay processing with system interfacing between Defense Joint Military Pay System - Reserve Component and RLAS for Reserve Component Troop Program Unit members. The delay in IPPS-A release of Personnel in November of 2022 shifted funding requirements to maintain the Legacy RLAS as a Financial Feeder System.</p> <p>FY 2025 Base funds will support increased functionality and interface solutions between RLAS and Integrated Personnel Pay System - Army (IPPS-A). Required modification to RLAS Legacy Application to Modernized RLAS (mRLAS) required for Cloud and/or System Interfaces. Improvement of Audit standards for RLAS Application Access and Segregation of Duties (SOD) and provide Cloud enhancement for RLAS after migration in fourth quarter FY 2024.</p> <p><b>FY 2025 to FY 2026 Increase/Decrease Statement:</b> Regional Level Application Software (RLAS) decreases from \$0.305 million to \$0.000 million due to a projected deployment date in FY 2025.</p>

RLAS (Legacy): OA24, OMAR Appropriation, SAG 432.												
D. Acquisition Strategy												
ArmyIgnitED is the Army's instantiation of an existing, mature, Air Force Government off the shelf (GOTS) solution, Air Force Automated Education Management System (AFAEMS), that will be updated to ensure (1) compliance with Army LPRDs, and (2) data exchange with Army system partners to provide TA and CA management functionality for use by Army Soldiers, Cadets, and civilians. The Program Manager makes extensive use of Integrated Product Teams (IPTs). Sub-elements of the acquisition (engineering and design, logistics planning, testing, etc.) are intensively managed by integrated teams of government and contractor personnel. Task performance is tracked against the Work Breakdown Structure (WBS) and resources allocated to each task are adjusted based on performance against the WBS.												
Some additional ArmyIgnitED capabilities will be added and enhancements will occur as more interfaces, business processes, and features are automated. The Agile development methodology and CI/CD process will continue for both maintenance and enhancements to ensure ArmyIgnitED is frequently updated in response to emerging needs, to include adding / updating functionality as requirements evolve due to ever-changing, and more Army Enterprise operations are integrated. ArmyIgnitED will conduct a source selection for the follow-on Solution Provider through the Army Contracting Command (ACC) managed, Base +4, hybrid Firm Fixed Price & Time and Materials software support and development contract before the current contract expires in July 2025.												
RLAS - Will utilize General Services Administration (GSA) contract support to solicit FY 2024-2026 three-year software support & development contract - hybrid Firm Fixed Price & Time and Materials.												
RLAS will utilize existing USAR G6 hardware / servers/ virtual environment/ Active Directory/ level 1-2 help desk/ utility software/ OS/ DB/ and other necessary hardware and devices as needed to operate the RLAS system.

**A. Mission Description and Budget Item Justification**

This project supports the U.S. Army Coalition Interoperability Assurance and Validation (CIAV) Research Network. CIAV provides an enduring and agile capability to execute approved processes. The project provides a repeatable and persistent infrastructure within the assurance and validation Coalition partner environment designed to ensure the succinct exchange of critical mission data between Mission Partners throughout all phases of military operations. It also enables the Army's implementation of Mission Partner Environment (MPE) and Combined-Joint All Domain Command and Control. CIAV uses a mission-based interoperability approach to identify capabilities, limitations and associated operational impacts and provides recommendations to improve or resolve information exchange issues between the U.S. Army and its mission partners. Funding facilitates coalition interoperability information exchange issue in compliance with AR 34-1 Multinational Force Interoperability and DODI 8110.01, MPE Information Sharing Capability Implementation for the DOD.

FY 2026 Base dollars in the amount of \$0.629 million will fund comprehensive analysis of mission-based interoperability effectiveness, ensuring alignment with validated operational and technical requirements. Execute risk reduction events, mission network test cases, multinational interoperability assessments, and battle command system evaluations and support Coalition Interoperability Assessment and Validation (CIAV) testing with 22 nations connected to the CIAV test network.

**A. Mission Description and Budget Item Justification**

The Virtual Toolbox for Installation Mission Effectiveness (VTIME) is the Army's real-time planned installation common operating picture, analysis, visualization and planning tool. It serves as an integrating and processing hub for numerous Army Installation Modernization technologies supporting users across echelons. VTIME will support the Army installation enterprise with a near real-time common operating picture of data spanning functional areas and offer a modern analytic platform to support Army implementation of the Army Installations Strategy, Army Data Strategy, and Army Business Management Plan. VTIME has been prototyped as a hybrid cloud solution, being planned and prototyped to adapt commercially available technologies to integrate and understand diverse installation data sources and improve installation planning and operations. VTIME provides a novel capability able to apply artificial intelligence and machine learning to improve strategic, operational, and tactical installation decision-making, spanning functions such as facility investment planning, space and land assignment, master planning, and Garrison operations. VTIME is designed for hybrid-cloud implementations, to offer installations the ability to support operations under network-contested conditions. This integrated and comprehensive prototype can allow the senior commander to both maneuver in a complex battlespace by providing the ability to prevent, protect and recover from hazards and enable cost saving through improved decision-making and operational efficiencies, supporting future integrations of emerging installation operations modernizing technologies.

Work is performed by the United States Army Engineer Research and Development Center. Work in this Project is related to, and fully coordinated with, PE 0605013A (Information Technology Development) and Project T05 (Army Business System Modernization Initiatives). Work in this Project supports the Army Installations Strategy as a critical enabler (data analytics) for modernization. Work in this Project complements the Office of the Assistant Secretary of the Army (Installations, Energy & Environment)'s Installation Modernization Pilot Program (AIMP2).

FY 2026 Base dollars in the amount of \$1.625 million will fund the migration of the cloud Virtual Toolbox for Installation for Mission Effectiveness (VTIME) components to cArmy, hardening and authorization of the Integrated Installation Planning (VIIP) initial operating capability and data interface agreements. Funds will complete design and partial integration of VTIME real-time decision-support solutions with production systems at Fort Benning. Funds will support acquisition planning activities for VTIME scaling to Army wide implementation.

## A. Mission Description and Budget Item Justification

The Operational Medicine Information Systems-Army (OMIS-A) Program Office provides modernized Operational Health Information Technology (OHIT) software applications to deployed Army medical personnel and units around the world. The OHIT software allows medical providers to electronically document patient care through the phases of care on the battlefield, from the moment of injury until the patient reaches a definitive care facility. With so many different roles and locations providing specific medical interventions at different stages of the patient transport process, electronic health record (EHR) documentation is critical for reasons such as patient safety, improved coordination of care, documentation accessibility across the battlefield, efficiency, accuracy and reliability of documentation, and better data analytics and reporting.

The OMIS-A team collaborates with multiple stakeholders to ensure the battlefield EHR documentation data interfaces with other warfighting systems, such as the Army's Command and Control/Situational Awareness (C2/SA) systems so commanders at all echelons are informed in real-time on the patient movement status of injured Soldiers and the health status of their forces, allowing them to make informed decisions about troop readiness, resource allocation, and troop movement on the battlefield. The Soldier's battlefield EHR documentation data flows into the Military Health Systems EHR, MHS GENESIS, which will follow the Soldier through their military career and into the VA Healthcare system. The battlefield EHR data is critical for patient continuity of care and the availability of the battlefield EHR is pivotal in applying for and obtaining VA Disability compensation.

Requirements in the operational environment are constantly evolving and to ensure the Warfighter's needs are being met, the OMIS-A program provides the following capabilities:

- Develops and/or Integrates OHIT software applications onto numerous Army systems and networks, including the Army Integrated Tactical Network (ITN)
- Tests and Evaluates software provided by the Joint Operational Medicine Information Systems (JOMIS) program to ensure effective operation and cyber compliance on Army network infrastructures
- Develops OHIT software applications for Army specific requirements that JOMIS can/will not provide
- Maintain Authority to Operate/Authority to Connect for all OHIT software applications on Army infrastructure
- Field and train capabilities to all Army units

FY 2026 Base funding in the amount of \$5.188 million ensures continuous engineering solution and testing services of Army-adopted Joint OHIT applications, modernization of currently fielded Army-specific OHIT software, maintains system cybersecurity, develops system interfaces with other components of the Army and Joint systems, develops training materials for the Army, and ensures compliance with all Army networks, including the Integrated Tactical Network (ITN).

Exhibit R-2A, RDT&E Project Justification: PB 2026 Army		Date: June 2025		
Appropriation/Budget Activity 2040 / 5	R-1 Program Element (Number/Name) PE 0605013A / Information Technology Development	Project (Number/Name) DH1 / Operational Medicine Information System		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
<p><b>Title:</b> Modernization of OHIT Software</p> <p><b>Description:</b> Army evaluation, verification and validation, and integration of modernized JOMIS software and modernization of currently fielded Army-specific software solutions operating on Army infrastructure ensuring effective operation, data transfer, and cybersecurity.</p> <p><b>FY 2025 Plans:</b> The engineering integration effort will be accomplished by independent evaluation, verification, and validation of modernized JOMIS software operating on Army infrastructure. Effective operation and cyber security will be ensured and provide Authority to Operate/Authority to Connect on all networks where electronic health records may reside. Where necessary, any software artifacts (threads, reports, queries, scripts, data export schemas) will be developed for specific external system interfaces with other components of the Army systems. Configuration and quality assurance for the overall systems will be overseen and managed in this activity.</p> <p>The objective of this activity is to demonstrate that the engineering design and development of all OHIT software is complete, the design risks have been minimized, the systems will meet Army specifications, and that the engineering design is supportable (practical, maintainable, safe, etc.) in an operational environment.</p> <p>The goal of this activity is regular delivery of useful OHIT capabilities in multiple releases to deployed Army units.</p> <p><b>FY 2026 Plans:</b> The emphasis in FY 2026 will focus on ensuring the continuous testing and integration of Army-adopted Joint OHIT software applications and/or the Agile development and/or modernization of Army-specific OHIT software, maintaining OHIT software cybersecurity, and ensuring all OHIT software on Army networks, including the ITN.</p> <p><b>FY 2025 to FY 2026 Increase/Decrease Statement:</b> FY 2026 decrease of \$0.576 million is due to higher Army requirements.</p>		1.984	3.199	2.623
<p><b>Title:</b> Comprehensive Testing</p> <p><b>Description:</b> Continuous testing will support DevSecOps (Development/Security/Operations) to improve product quality and enable development teams to deliver stable and reliable software releases on shorter cycles. Continuous Network testing on all Army networks, and Army operations on networks in foreign countries will endure throughout the development process, while maintaining collaboration and communication with software developers. Cybersecurity testing will be specifically undertaken for maintaining Authority to Operate/Authority to Connect on all networks where electronic health records may reside.</p> <p><b>FY 2025 Plans:</b></p>		2.102	2.710	1.864

<b>Appropriation/Budget Activity</b> 2040 / 5		<b>R-1 Program Element (Number/Name)</b> PE 0605013A / <i>Information Technology Development</i>	<b>Project (Number/Name)</b> DH1 / <i>Operational Medicine Information System</i>		
<b>B. Accomplishments/Planned Programs (\$ in Millions)</b>			<b>FY 2024</b>	<b>FY 2025</b>	<b>FY 2026</b>
<p>All testing initiatives will fully adopt and incorporate Agile software methods and processes of developing, testing, and executing to deliver capabilities fast and effectively. The iterative testing process will support engineering and allow rapid response to changes in operations and technology.</p> <p>The testing strategy will address identification of test objectives, baselines and foundations to be tested, hardware and software configurations to be tested, development of Use Cases to fully exercise the application's functionality, step-by-step procedures at the key stroke level, Entrance/Exit criteria, Pass/Fail criteria, failure identification and analysis, and schedules. Regression testing will be performed to verify and ensure recent changes do not negatively affect existing features of the software, and also identify the scope of hardware specifications required to operate the system.</p> <p>Comprehensive testing will be accomplished on all Army networks, including the Army Cloud, cARMY, and other various methods of communication with complete documentation of the results of all testing developed and retained.</p> <p><b>FY 2026 Plans:</b>            All testing initiatives will fully adopt and incorporate Agile software methods and processes to develop, test, and execute to deliver capabilities quickly and effectively. The iterative testing process will include the functional community, support engineering and allow rapid response to changes in operations and technology. The test objectives will assess the design and implementation of each software delivery to ensure requirements down to the lowest level are satisfied as well as to ensure that new capability did not disrupt capability implemented in a previous delivery.</p> <p>Developmental testing is a continuous process throughout the development cycle permitting early identification of potential issues, delays, or product underperformance. Government integration testing will focus on the integration of software user stories and epics from the developer into end-to-end functionality for the user. Comprehensive testing will be accomplished to ensure interoperability with the ITN. Integral to this effort is ensuring effective operation and cybersecurity on Army infrastructure and that Authority to Operate/ Authority to Connect for all software applications on Army infrastructure can be maintained.</p> <p><b>FY 2025 to FY 2026 Increase/Decrease Statement:</b>            FY 2026 decrease of \$0.846 million is due to higher Army requirements.</p>					
<p><b>Title:</b> Development of training products and fielding methods</p> <p><b>Description:</b> Development of training products and software delivery methods for effective and efficient fielding to Army units.</p> <p><b>FY 2025 Plans:</b>            In FY 2025, training information and materials provided by Joint program for modernized capabilities will be modified for use by Army medical personnel via computer-based training (CBT). The purpose and benefits of CBTs over traditional in-person Army</p>			-	0.920	0.701

**A. Mission Description and Budget Item Justification**

Research related to the Army Suicide Prevention Program enhances the Army's ability to prevent suicidal behaviors by increasing understanding of risk and protective factors and by developing and testing interventions. Research in this area supports development and modification of policies, programs, and practices that address suicide prevention and related harmful behaviors that are devastating to the Total Army and its mission. This program also helps DoD ensure Service members start their military career with the skills and knowledge needed to be successful and to confront, overcome, and/or grow from challenges faced both in their military career and personal life.

Research in this program will result in more precise determinations of potential for future successful service, and more targeted identification of individual or unit-level needs (e.g., requirements for intervention, training, and/or behavioral health services). Continued funding supports a comprehensive approach to the prevention of harmful outcomes for Soldier and ensures the Army's ability to meet mission requirements in the current and future operating environments.

FY 2026 Base funding in the amount of \$2.145 million will fund will expand efforts to assess and address risk and protective factors related to suicide, particularly in high-risk formations like combat units. The study will examine links between harmful behaviors and identify ways to strengthen Army leaders' ability to foster protective environments and improve access to services. Funding will also support the development and validation of tools, training, and organizational frameworks aimed at reducing harmful behaviors and improving outcomes throughout the Soldier Lifecycle, from selection and training to leadership development.

**B. Accomplishments/Planned Programs (\$ in Millions)**

	<b>FY 2024</b>	<b>FY 2025</b>	<b>FY 2026</b>
<b>Title:</b> Army Suicide Prevention	2.204	2.151	2.145
<b>Description:</b> This program supports retention and readiness by enhancing the Army's ability to identify individuals with a higher likelihood of having already experienced, or of potentially experiencing, sub-clinical behavioral issues, and by addressing factors that contribute to increased risk and/or serve as protective factors for suicide. Research in this program has expanded the Army's understanding of risk and protective factors associated with suicide, examined suicide "clustering/contagion" in the military context, and identified current non-commissioned officer (NCO) knowledge, skills, and training associated with recognizing and addressing Soldier needs. Future research will build on previous efforts resulting in more precise measurement of individual resilience skills, trauma informed training for leaders who interact with high-risk Soldiers, and data on the effectiveness of existing and newly identified individual and unit prevention efforts.			
Work in this program is performed by the Directorate for Prevention, Resilience, and Readiness in Arlington, VA.

**A. Mission Description and Budget Item Justification**

The efforts under this project support the Army's Human Resources Information Technology needs.

1. Human Resource Command (HRC) Core IT: This program supports efforts to plan, design, develop, and test Information Technology (IT) solutions to fulfill the Army's Warfighter Support Mission, accommodate emerging Army requirements, and fulfill Future Army needs. Ongoing development efforts support multiple functional areas including logistics, personnel, transportation, training, medical/health protection, and the sustaining base. The focus of the rationalization effort is to identify value-added applications capable of serving a broader Army enterprise audience and garnering efficiencies through the elimination of outdated, legacy, and duplicative applications. Applications are upgraded or enhanced to meet compliance with Army Common Operating Environment standards in accordance with Enterprise Cloud Management Agency (ECMA). Additionally, program supports enhancements and modifications to the Interactive Personnel Electronic Records Management System (iPERMS) and iPERMS-Secure (iPERMS-S), as well as development of interfaces based upon emerging requirements, Cybersecurity, functionality and compliance with Army standards.

**FY 2025 Plans:**

FY 2025 funding continues to support iPERMS enhancements and modifications, as well as development of interfaces based upon emerging requirements, cybersecurity, functionality, and compliance with Army standards, cArmy Cloud Migration efforts, and ASBS 2.0 development which also supports all and DA G1 Talent Management Task Force Battalion Command Assessment Program (BCAP) and is estimated for completion by Sep 2027. Additionally, USAHRC has utilized all FY 2024 and FY 2025 funding towards the completion of a viable ASBS 2.0 product while enhancing iPERMS auditing features to achieve the Army Data Strategy, modernizing applications to leverage authoritative data sources to reduce duplicate application capabilities, resulting in data and applications requiring fewer infrastructure services. This data and application rationalization allows USAHRC to operate a standard infrastructure, reducing hardware and software complexities in support of modernization.

**FY 2026 Base Plan:**

FY 2026 funding continues ASBS 2.0 development which also supports DA G1 Talent Management Task Force Battalion Command Assessment Program (BCAP) which is estimated for completion by Sep 2027. Additionally, USAHRC will utilize FY 2026 funding to complete rationalize data and databases to achieve the Army Data Strategy, modernizing applications to leverage authoritative data sources to reduce duplicate application capabilities, resulting in data and applications requiring fewer infrastructure services. This data and application rationalization allows USAHRC to operate a standard infrastructure, reducing hardware and software complexities and meets compliance with Army Common Operating Environment standards in accordance with Army Application Management Business Office (AAMBO).

<b>Exhibit R-2A, RDT&amp;E Project Justification:</b> PB 2026 Army		<b>Date:</b> June 2025
<b>Appropriation/Budget Activity</b> 2040 / 5	<b>R-1 Program Element (Number/Name)</b> PE 0605013A / <i>Information Technology Development</i>	<b>Project (Number/Name)</b> FM7 / <i>Human Resources Information Technology</i>
<p>2. Army Records Information Management System (ARIMS) is the Army's policy and enterprise system deployed to meet statutory (36 CFR) and regulatory (AR 25-1, AR 25-400-2) requirements to manage records that document the policies, decisions, and actions of the Army both as a military department and federal institution. ARIMS supports approximately 58,000 registered users with tools and capabilities to collect and preserve Army records, serves as the records management component of the Army Electronic Archives (AEA), and the Secretary of the Army has mandated its use to collect and preserve Army records. ARIMS is in production on the SIPRNet with ARIMS-Classified (ARIMS-C) to provide similar capabilities for the collection and preservation of the Army's classified records. ARIMS is an integrated system that supports the SecArmy objective to integrate management systems for the Army's records management programs and business operations. This line item funds for system, network, and application sustainment for the ARIMS and ARIMS-C infrastructure. Technology changes, integration, and systems migration require contractor support to ensure the AEA continues to preserve essential electronic records. These activities support the ARIMS applications and comply with the SecArmy and Senior Army leadership to integrate and standardize management systems for business operations. Failure to fund will result in the loss of expertise and in extensive down time in the event of any hardware or software failure in the ARIMS infrastructure. ARIMS downtime precludes the collection and preservation of the Army long-term important records (such as past Contingency Operations (CONOPS) records). As a web-based and customized GOTS system, ARIMS is dependent on private industry expertise to conduct troubleshooting and correction of any application or operating system component that is the foundation of the ARIMS and ARIMS-C systems. These skill sets are not maintained by government staff and must, by DoD directive (C3I), be acquired from the private sector.</p> <p>Numerous Army-wide missions and programs which are supported with both enterprise and non-enterprise applications and a datacenter. All are designed to streamline production to meet statutory requirements, Presidential directives, and achieve senior leader guidance production for Army level requirements. Programs include: Army Declassification (ADAMS), FOIA (FACTS and FOIA Library), Privacy (PATS), Records Management (ARIMS/ARIMS-C/AAO/Army Capstone).</p> <ul style="list-style-type: none"> <li>- Records management including office symbols, correspondence, management information control, and addresses (5 USC, 36 CFR; 44 USC 3601-3606; overseeing compliance with Presidential Memorandum; Public Law (PL) 106-58; and OMB/National Archives and Records Administration (NARA) Directive Managing Government Records Directive M-12-18), and Memorandum M-23-07, Transition to Electronic Records.</li> <li>-Army FOIA Programs (Presidential Directives on Transparency and Open Government, FOIA Improvement Act of 2016, Open Government Act of 2007, E.O. 13392, 5 USC 552 and 552a (as amended), PL 110-53, and PL 106-554).</li> <li>- Army Privacy/Civil Liberties Programs, 5 USC 552a as amended, Section 803 of PL110-53 and DoDI 1000.29.</li> <li>- OURR support for PTSD and other health related case research and processing.</li> <li>- Army 508 Compliance program is being driven by federal law (Section 508 of the Rehabilitation Act of 1973, as amended (29 U.S.C. 794d.)), Department of Defense guidance (DoDM 8400.01 (Accessibility of Information and Communications Technology)), and guidance delivered in Executive Order 14035, Executive Order on Diversity, Equity, Inclusion, and Accessibility in the Federal Workforce.</li> </ul> <p>FY 2026 Base dollars in the amount of \$1.442 million will modernize record-keeping through advanced application software, improving efficiency, accessibility, security, and scalability. Automation will reduce human errors and streamline workflows, enabling cloud-based and mobile access for authorized personnel to enhance collaboration and decision-making.</p> <p>3. Family Advocacy System of Records (FASOR) is the information system used by the Army to manage child and adult based abuse incidents referred by the Family Advocacy Program (FAP). FASOR is used to capture/perform incident case management and allows for standardization of reviews and incident determinations. FASOR</p>		

**UNCLASSIFIED**

Exhibit R-2A, RDT&E Project Justification: PB 2026 Army		Date: June 2025
Appropriation/Budget Activity 2040 / 5	R-1 Program Element (Number/Name) PE 0605013A / Information Technology Development	Project (Number/Name) FM7 / Human Resources Information Technology
is a key system used in FAP Army Central Registry (ACR) background checks when determining suitability of individuals to be placed into "positions of trust". Finally, FASOR facilitates reporting and data analysis in support of internal, Army, DoD, FOIA and Congressional requirements.		
FY 2026 base dollars in the amount of \$1.115 million will support a new modernization contract focusing on extensive software development to ensure compliance with both NDAA Statutes and DoDI 6400 Series Regulations. This modernization contract ensures continued translation of the FASOR legacy code to the new database needed to sustain compliance with both DoD and Army FAP regulatory requirements while creating new effective modules in managing the Incident Management process.		
4. Army SHARP Data Management System (DMS) - Funding for Army Prevention Data Management supports the development of an integrated prevention data infrastructure that will provide stabilization and standardization for prevention data collection, analysis, visualization, and reporting requirements. Prior year dollars supported advanced analytics capabilities, business intelligence capabilities, and predictive analysis for SHARP Data to inform prevention efforts.		
FY 2026 Base dollars in the amount of \$1.047 million will expand these capabilities to a broader range of harmful behaviors to enable an integrated and comprehensive view of the prevention space.		
5. TRANSITION ASSISTANCE PROGRAM XXI (TAP XXI): The Transition Assistance Program XXI (TAP-XXI) application provides an interactive, multimedia approach to pre-separation counseling and job assistance training. This application uses full motion video, graphics, and sound to train clients; and schedules clients for classroom-type instruction. It integrates a complete range of transition services and benefits for service members, Department of Defense civilian employees, and their family members as they transition from the military. TAP-XXI is a web-based, three-tiered application with a centralized database for all Transition sites. The user interface is browser-based, the application is based on a storefront intranet model to provide access from within Transition centers. The user interface is browser-based, the application is based on a storefront intranet model to provide access from within Transition centers. The application also allows for access outside of Transition centers to support mobilizing and de-mobilizing during Yellow Ribbon Program events or delivery of services at home station. There is no application processing on the desktops located at Transition Centers. TAP-XXI application suite consists of the following subsystems: Transition Assistance Program - Support (TAP-Support), Transition Assistance Program -Online (TAP-Online) and TAP Virtual (Immersive Terf). The infrastructure modernization will provide system stability, support expansion requirements, and ensure reliable customer support.		
TAP XXI has no funding beyond FY 2024.

This data and application rationalization allows USAHRC to operate a standard infrastructure, reducing hardware and software complexities and meets compliance with Army Common Operating Environment standards in accordance with Army Application Management Business Office (AAMBO).</p> <p><b>FY 2025 to FY 2026 Increase/Decrease Statement:</b> FY 2026 decrease of \$1.776 million due to iPERMS enhancement and modifications expected to be completed by end of Fiscal Year 2026.</p>					
<p><b>Title:</b> ARIMS</p> <p><b>Description:</b> This funds contractor man-years for technical and analytical expertise in the integration and validation of operational databases including Army Historical Records Online (AHRO) used to store and research combat records from combat operations in Korea, Vietnam, Somalia, Panama, Persian Gulf, Afghanistan, Iraq, and other contingency operations. The effort supports unique operational databases that directly support research into Veteran claims for Post-Traumatic Stress Disorder, Agent Orange, and other medical conditions developed by Soldiers during combat and non-combat operations. Supports the Army's Data Center Consolidation by turning data base structure to be more efficient and reduce maintenance support costs.</p>			3.102	1.977	1.442

**UNCLASSIFIED**

<b>Exhibit R-2A, RDT&amp;E Project Justification:</b> PB 2026 Army			<b>Date:</b> June 2025		
<b>Appropriation/Budget Activity</b> 2040 / 5		<b>R-1 Program Element (Number/Name)</b> PE 0605013A / <i>Information Technology Development</i>		<b>Project (Number/Name)</b> FM7 / <i>Human Resources Information Technology</i>	
<b>B. Accomplishments/Planned Programs (\$ in Millions)</b>			<b>FY 2024</b>	<b>FY 2025</b>	<b>FY 2026</b>
<p>Increased Congressional inquiries and litigation have raised leadership awareness of the need to improve records management compliance Army-wide. SecArmy directed workgroup, led by the AASA, with participation by the CIO/G-6, NETCOM, OGC, and OCLL is to provide a comprehensive solution for the Army and integrate and standardize management systems for the Army's business operations. Enhancing and modernizing of existing ARIMS functionality and capability to support the SecArmy initiative includes updating ARIMS to support current technology such as Microsoft Office 365 environment, expanding storage capability, including network storage , and commensurate expansion of backup, security and communications capabilities over CONUS and OCONUS networks.</p> <p><b>FY 2025 Plans:</b> Funds are used to sustain technology refresh efforts ensuring the Army's records comply with statutory and regulatory requirements, preserves individual record integrity, mitigates the risk of historical information loss, and ensures official Army records are available for Congressional, Government Accountability Office, Executive Branch, and FOIA requirements. We fund contractor man-years to sustain this system through an IT Services contract.</p> <p><b>FY 2026 Plans:</b> The Army Records Management and Declassification programs are in needed of this funding to modernize the Army-wide records through application software development that will enhance efficiency, accessibility, security, and scalability. More specifically, the goal is to obtain application software that can automate manual record-keeping processes, reducing human errors, and streamline workflows. Through modernization, we can access records through cloud-based solutions or mobile applications. This accessibility ensures that authorized personnel can retrieve, update, and analyze records from various locations, improving collaboration, and decision-making. Army records that contain sensitive information must be safeguarded against unauthorized access and breaches. Through the use of information technology/modernized software, the Army can continue to implement and strengthen security measures such as encryption, access controls, and audit trails to protect data integrity and confidentiality. As the Army (electronic) records continue to grow or record-keeping needs continue to expand. Application software designed for Army-wide scalability is needed to accommodate increasing volumes of data and users without sacrificing performance or reliability. This investment in modernized software can help ensure compliance with public law/statutes and regulations by automating compliance checks, generating audit reports, and maintaining and safeguarding comprehensive records for the entire Army.</p> <p>Through continuously funding, the Army will be able to modernize it records programs through application software development allowing the Army to effectively manage their data/records assets, improve operational efficiency, mitigate risks, and stay competitive in today's digital environment. Currently these funds help to sustain an IT Applications Management and Support Services Contract - W52P1J-18-D-A042.</p>

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Critical risk of not obtaining this funding: Risk to national security, compliance, operational inefficiencies, and historical preservation; impact to maintaining Army's operational readiness, compliance with statutory requirements, and historical integrity. Will expose the Army to legal, regulatory, and compliance risks by unintentionally or unauthorized release of records including FOIA request, privacy breaches, classified material, and violations of accessibility standards-508 compliance.  <b>FY 2025 to FY 2026 Increase/Decrease Statement:</b> FY 2026 decrease of \$0.535 million due to inflation rate adjustments for non pay, no fuel requirements, and a reduction in advisory and assistance service contracts.				
<b>Title:</b> Family Advocacy System of Records (FASOR)  <b>Description:</b> Family Advocacy System of Records (FASOR) is the information system used by the US Army FAP to support adult and child abuse incident management, central registry of victims and offenders to authorized agencies, and to provide input for required Congressional and public reporting. FASOR is the authoritative source (registry) for all incidents of adult and child abuse in the Army. It is on the Army Human Resource Command's High Value Asset list.  <b>FY 2025 Plans:</b> FY 2025 funding will provide continued software development & architecture support as additional functionality is implemented while finalizing the migration of the legacy FASOR data into a new modernized structure. High level functionality modules include, but not limited to; Family Advocacy Program (FAP) Incident (Case) Management and FAP Data / Reporting.  <b>FY 2026 Plans:</b> FY 2026 Funding covers the new contract for Modernization that includes extensive software development of modules/ functionality to bring the Family Advocacy Program (FAP) in compliance with various NDAA and DoDI 6400 series requirements. New modules include, but are not limited to, Fatality Review, Incident (Case) Management, FAP Client Intake Portal, Incident Data Entry, Local Database Reports, Database Extraction (Army Central Registry) , Victim Advocacy, Commanders, Prevention, and Client Intake. When the NDAA, DoDI 6400 manuals or other directives contain changes for implementation across the FAP, the functional representatives prioritize these needs within existing requirements. These requirements have been approved within the current Capability Requirements Document (CRD) and validated by MEDCOM legal to require RDT&E funding.  <b>FY 2025 to FY 2026 Increase/Decrease Statement:</b> FY 2026 decrease of \$0.245 million due to completion of code modernization efforts to the FASOR database to allow it to migrate to the Army Cloud, reducing RDT&E costs.		1.488	1.360	1.115

**A. Mission Description and Budget Item Justification**

This project funds information technology systems that support Army Training. The two systems under FM8 are described below. Of those, the Army Training Information System (ATIS) is an Army priority and the focus of the major investment in FM8. ATIS directly supports two of the four Army Unit Readiness Priorities - Training and Leader Development and serves as an enabler for Manning, Equipping, and Scheduling.

**1. Army Training Information System (ATIS)**

**Problem Statement:** The Army's current collection of non-integrated training information systems provides limited utility with data that is unreliable, un-trusted, inaccessible, and not responsive to user needs. Sustaining these systems, with their various architectures, standards, and service providers results in higher operating and sustainment costs to the Army.

**Objective:** Collapse 20 legacy systems into a single portal supporting 5 training capability areas.

**Solution:** Utilizing Commercial Off the Shelf (COTS) software ATIS will deliver a single portal enterprise training environment capability encompassing scheduling, training development, learning content management, training management, and resource management for all individual, as well as collective training and education. As ATIS is fielded, the Army will reduce the overall cost of the training environment by retiring the duplicative, stove piped systems and improve performance with a data-centric, governed, and architecturally compliant system. ATIS will sunset 20 antiquated information training systems costing over \$75M annually.

- Training Development: provides ability to develop and coordinate information, including training packages, training events, courses, and exercises.
- Training Management: provides centralized ability to access and manage information, including individual and collective/unit training that supports mission tasks and individual training records.
- Enterprise Scheduling: provides a single integrated set of applications to schedule training resources, including transportation, classrooms, ranges, supplies, and mandated legal/social individual and unit training.
- Content Management: provides centralized access to training information anytime, anywhere, including educational and professional instruction.
- Resource Management: provides ability to manage availability/sustainability of training enablers and resources.

Without ATIS, Army organizations will continue to maintain an abundance of legacy systems that have redundancies across functionality and capability, which contributes to redundancy and discrepancies in data, thus inhibiting efficient use of training resources (people, time, money, material) and inhibiting leaders' ability

Exhibit R-2A, RDT&E Project Justification: PB 2026 Army		Date: June 2025
Appropriation/Budget Activity 2040 / 5	R-1 Program Element (Number/Name) PE 0605013A / Information Technology Development	Project (Number/Name) FM8 / Information Technology for Training Systems
to address training readiness at every echelon of the Army. ATIS is being postured to best support DoD and Army Digital Modernization Strategic Initiatives as the authoritative source of data for Training and Readiness information.		
FY 2026 RDTE Base dollars in the amount of \$10.970 million will enable ATIS to sunset the Digital Training Management System (DTMS) in 2QFY26. DTMS is the largest component of the Army Training Management System (ATMS) and its features will be delivered in continuous integrated releases of capability in accordance with Agile Project Management's Continuous Integration/Continuous Development (CI/CD) model. Development will utilize the robust ATIS infrastructure along with COTS products to continuously improve the quality of software features delivered, improve resource utilization, reduce manual errors through the use of automation in testing and integration, and ensure increased efficiency over time through the use of iterative processes.		
2. Defense Language Proficiency Test, version 5 (DLPT5) Content Analysis, Categorization & Modeling (CACM). The DLPT5 Content Analysis, Categorization, and Modeling (CACM) contract is in direct response to Defense Language Institute Foreign Language Center (DLIFLC)'s DoD Instruction assigned responsibilities for DLPT item bank maintenance, psychometric analysis, and informed pool management, and closely support the DLPT Validity Framework. This project enhances the DLIFLCs ability to efficiently execute high quality DLPT development processes through the integration of benchmark automation capabilities. Accomplishments include: developed and delivered initial AI assisted item generation capabilities; developed and delivered on-demand ordered similarity analysis capabilities; developed and delivered integrated audio quality analysis capabilities; developed and delivered integrated textual analysis capabilities; developed and delivered integrated conversational analysis capabilities; developed and delivered integrated audio quality analysis capabilities; developed auto-triage of examinee comments capabilities; developed and delivered automatic machine translation capabilities; developed and delivered integrated unordered similarity analysis capabilities; developed and delivered integrated Auto-ILR capabilities in 32 languages; developed and delivered integrated machine transcription capabilities in 6 languages; d- developed AI assisted English evaluation; and, developed and delivered annotator alignment analysis capabilities in 2 languages.		
FY 2026 Base dollars in the amount of \$1.139 million support the DLPT5 CACM. The DLPT5 CACM contract is in direct response to DLIFLC's DoD Instruction assigned responsibilities for DLPT item bank maintenance, psychometric analysis, and informed pool management, and closely support the DLPT Validity Framework. Continued development of these capabilities will ultimately result in cost savings for the Government due to reduced dependencies on contracts and outside-expert deliveries.		
B. Accomplishments/Planned Programs (\$ in Millions)		
Title: Army Training Information System (ATIS)		FY 2024
Description: Army Training Information System (ATIS) is a Defense Business System that will provide a common operational picture (COP) of the training environment in five integrated and interoperable capability areas: Training Development; Training Management; Training Enterprise Scheduling; Learning Content Management and Training Resource Management. These capabilities will enable Commanders, leaders, Soldiers, and civilians to better understand, visualize, describe, direct, lead, and assess training requirements so that they can more effectively plan, prepare, execute, and assess training. End result is an ATIS that enables Soldiers to train as they will fight, so they can effectively fight as they have trained.		FY 2025
FY 2025 Plans:		FY 2026

<p><b>D. Acquisition Strategy</b></p> <p>- Deliveries will be based on requirements, priorities, and funding</p> <p>- The ATIS Product Management Office (PMO) will utilize Commercial Solutions Openings (CSO) practices to procure Commercial Off-the-Shelf (COTS) products and integrate them seamlessly into the existing ATIS data-centric architecture. Recognizing the significant configuration, interface development, and workflow optimization required, integration support and architectural consistency will be critical to sustaining development environments and establishing standardized integration processes. This effort will leverage both in-house and contractor resources. By adopting Agile methodologies, the program will benefit from iterative development, continuous feedback, and the ability to rapidly adapt to evolving requirements. Additionally, the continued application of Software Acquisition Pathway (SWP) practices will provide substantial advantages as ATIS navigates the procurement, modification, development, and deployment of features across 20 legacy systems. These efforts will align with the five core capability areas defined by the ATIS project, ensuring a cohesive and efficient modernization strategy.</p> <p>- Currently a Business Category II (BCAT II) Defense Business System under DoD 5000.75. Updated requirements which focused on a more agile, and integrated product resulted in the Capability Requirement Document (CRD) being reassessed and approved in Apr 2024.</p>

**A. Mission Description and Budget Item Justification**

The project Criminal Investigation Management System (CIMS) is to develop, maintain, and operate a secure, unified comprehensive system of applications to support the Army's law enforcement (LE) mission and to transform the Department of the Army Criminal Investigative Division (DACID) Law Enforcement (LE) applications through continuous innovation and modernization to improve operational methodologies consistent with current LE community practices.

FY 2026 Base dollars in the amount of \$3.095 million will enable the continuous effort to increase and modernize the Criminal Investigation Management System (CIMS). Funds will allow the development and support of law enforcement data sharing in the Army Law Enforcement Community of Interest, as well as complying with mandated external sharing initiatives with DoD law enforcement agencies, select Army systems data sources which will be integrated into a single net-centric portal structure.

**B. Accomplishments/Planned Programs (\$ in Millions)**

	<b>FY 2024</b>	<b>FY 2025</b>	<b>FY 2026</b>
<b>Title:</b> Criminal Investigative Management System (CIMS)	2.599	3.139	3.095
<b>Description:</b> Criminal Investigative Management System (CIMS). CIMS is a collection of mission essential information technology (IT) systems that supports the DACID, the Office of the Provost Marshal General (OPMG), the U.S. Army Crime Records Center (USACRC), the Army Military Police School (USAMPS), and other DoD Law Enforcement (LE) entities and stakeholders. Through CIMS, the DACID and the OPMG developed an integrated and unified, comprehensive enterprise program / system that houses both classified and unclassified Law Enforcement Sensitive (LES) data, leveraging existing and future Army LE information technology assets and other external data sources, and providing a full range of law enforcement functions. The primary component of CIMS is a comprehensive enterprise system known as the Army Law Enforcement Reporting and Tracking System (ALERTS) providing Army LE stakeholders the enhanced capability to rapidly and efficiently manage a variety of LE and criminal intelligence functions, as well as a broader range of senior executive reporting requirements. Automatic, electronic data transfers between ALERTS and Integrated Personnel and Pay System - Army (IPPS-A) are being established to provide historical, up-to-date information assisting in agent hiring procedures. The Accreditations module of CIMS was developed from a stand-alone to an enterprise application providing access to multiple DACID personnel. The National Incident-Based Reporting System (NIBRS) electronic feed was updated incorporating FBI standards providing accurate DNA and fingerprint data. RDT&E dollars are required to transform ALERTS along with multiple DACID mission systems through software modernization from an Army-centric investigative LE agency into an elite Federal LE agency that is ahead of the threat, continuously evolving and

• OMA - Firm Fix Price: <i>Labor IT Support Services</i>	2.391	6.598	5.592	-	5.592	-	-	-	-	-	-
<b>Remarks</b>											
OMA dollars are used for the operations and maintenance of the CIMS environment which includes ensuring the mission applications are operational and available 24 hours, 365 days per year. It includes server patching with the latest security patches, backing up the data, providing customer service through a CIMS Help Desk, creating/deleting user accounts, monitoring the health of the server environment, operating the Army's Law Enforcement (LE) case management system.											
<b>D. Acquisition Strategy</b>											
DACID utilized Agile Development which is a process where development is broken up into several stages. It involves constant collaboration with the stakeholders for continuous improvement and changes in each stage. Development is delivered in Releases to the customer for testing and acceptance ensuring that the project stays on track. The new CIMS contract was put in place to continue the development of ALERTS and other CIMS applications.

## A. Mission Description and Budget Item Justification

The United States Military Entrance Processing Command (USMEPCOM) is an Office of the Secretary of Defense (OSD) Field Operating Activity with Army serving as its Executive Agent (EA). USMEPCOM reports to OSD Accession Policy (AP). USMEPCOM is the vital link between recruiting and training America's armed forces. The Command applies established DoD standards during military processing, thereby providing continual military enlistments to the Army, Navy, Air Force, Marines, Coast Guard, and Space Force. USMEPCOM processes applicants for military service through its 65 Military Entrance Processing Stations (MEPS) across the Continental United States (CONUS) as well as Non-Foreign Outside the Continental United States (OCONUS) locations.

USMEPCOM began processing applicants for service in the 1970s using a by-hand paper intensive process. In 1995, USMEPCOM introduced the United States Military Entrance Processing Command Integrated Resource System (USMIRS) 1.0. USMIRS provides automated support for conducting aptitude tests and medical examinations and administratively processing, enlisting, and shipping applicants for the Armed Forces, Reserves, and Coast Guard. This includes the support for automated versions of the Armed Services Vocational Aptitude Battery (ASVAB) tests. The system also initiates Social Security Administration (SSA) checks for identity verification, interfaces with US Citizenship & Immigration Services (USCIS) to verify citizenship status, and interfaces with the Federal Bureau of Investigation (FBI) for background screening. The system utilizes digital fingerprints to identify/eliminate individuals with criminal records from entering military service. USMIRS supports recruiting capabilities through electronic interfaces and data sharing, using standard Department of Defense (DoD) data elements with Recruiting Service systems (such as ARISS, AIE, DMDC, and DCSA etc.) In the event a military draft is required, USMIRS supports mobilization through electronic links with the Selective Service System (SSS) as well as automated support for conducting aptitude tests and medical examinations and administratively processing, inducting, and shipping SSS registrants.

In FY 2021, USMEPCOM launched the USMIRS 1.1 Minimal Viable Product (MVP). The MVP modernizes and expands the core functionality of USMIRS and migrates it to the cloud. The resulting system is automated, scalable, and secure. Further investment in the system is planned through FY 2035 to continue development of additional applications (to include a link to the Military Health System GENESIS (MHS GENESIS)), integrated analytics, predictive analytics (machine learning and power business intelligence), and data quality.

FY 2026 Base dollars in the amount of \$10.563 million will fund ongoing incremental modernization of the United States Military Entrance Processing Command Integrated Resource System (USMIRS), including legacy application upgrades, data transformation, and Artificial Intelligence (AI) integration.

## B. Accomplishments/Planned Programs (\$ in Millions)

<b>B. Accomplishments/Planned Programs (\$ in Millions)</b>		<b>FY 2024</b>	<b>FY 2025</b>
<p><b>Description:</b> As of March FY 2021, the USMIRS 1.1 Minimum Viable Product (MVP) was launched. This is the core functionality of the system. USMIRS 1.1 is a system that is comprised of multiple sub applications, and those non-core applications will need to be modernized. FY 2022 RDTE supports the further modernization of non-core applications in the USMIRS system of systems such as our testing and order writing applications.</p> <p><b>FY 2025 Plans:</b> FY 2025 funding supports the continual modernization of USMIRS 1.1 system of systems. Ensure incremental modernization efforts to keep the new system current and secure.</p> <p><b>FY 2026 Plans:</b> Continued incremental modernization efforts of the United States Military Entrance Processing Command Integrated Resource System (USMIRS). Efforts include upgrading legacy applications of the system, data transformation, and Artificial Intelligence (AI) integration.</p> <p><b>FY 2025 to FY 2026 Increase/Decrease Statement:</b> FY 2026 increase of \$8.305 million due to emerging growth that supports data transformation and AI integration into the USMIRS 1.1 system of systems.</p>			
<b>Accomplishments/Planned Programs Subtotals</b>		5.758	2.258
<b>C. Other Program Funding Summary (\$ in Millions)</b>			
N/A			
<b>Remarks</b>			
<b>D. Acquisition Strategy</b>			
<p>The overall effort of the USMEPCOM IT transformation is to modernize and fully digitize the US Military Entrance Processing Command Integrated Resource System (MIRS). The modernization of the system will minimize vulnerabilities and fully digitize 65 military entrance processing stations resulting in efficiencies to all six uniformed services.</p> <p>The modernization of the USMIRS system is being accomplished using the agile method of software development in short time-boxed "sprints". Program management functions were being performed by the Defense Digital Service (DDS). DDS managed an prototype development contract with a local consulting firm called Tandem (previously known as Devmynd. Based in Chicago IL). The DDS/Tandem effort ended in December of CY2019 and produced a prototype. An in-house program management element of USMEPCOM will manage a follow-on contract to turn the prototype USMIRS 1.1 into a deployable system in FY 2021.</p>

## A. Mission Description and Budget Item Justification

Army Business System Modernization Initiatives include:

1. Enterprise Business Systems-Convergence (EBS-C): SAP announced that the current application, Enterprise Central Component (ECC), would not be maintained after 2027 and customers will be required to upgrade to their new version SAP S/4 HANA. In response to this notification, the Army conducted studies in 2019/2020 by the Business Enterprise IT Leaders Group chaired by the Office of Business Transformation. Based on the results of these studies and direction from the Under Secretary of the Army, EBS-C is executing a strategic approach to modernize the Army business system landscape; align modern combat and combat support system capabilities with existing modernization efforts to enable Army force dominance during multi-domain large-scale combat operations in contested logistics environments; and improve overall Army financial operations resulting in improved financial management and successful audit outcomes. The Army is working EBS-C requirements to improve process agility and cross process integration; provide consistent user experiences with an intuitive user interface; and improve data integrity and security. At the enterprise level, EBS-C seeks to integrate financial and logistics processes and create opportunities to decrease overall Defense Business Systems (DBS) redundancies and duplications existing in the Army portfolio. The in-scope DBS for this effort includes General Funds Enterprise Business Systems (GFEBS) and GFEBS-Sensitive Activities (SA), Logistics Management Program (LMP), Global Combat Support System (GCSS)-Army, Army Enterprise System Integration Program (AESIP) Hub, and numerous non-ERP systems performing needed logistics and financial functions.

FY 2026 base dollars in the amount of \$64.905 million will enable the development of the EBS-C solution and the establishment of the Continuous Integration and Continuous Delivery (CI/CD) pipeline. The development will continue based on the Minimum Viable Capability Release in FY 2025 deployed to the EBS-C solution in FedRAMP compliant government provided cloud environments utilizing proven agile methodology.

2. Global Force Information Management (GFIM) is an automated, integrated, and interoperable digital environment that enables the Army's Deploy to Redeploy/ Retrograde (D2RR) end-to-end business processes in support of Dynamic Force Employment (DFE). The GFIM system will provide the core Global Force Management-Data Initiative (GFM-DI) compliant data necessary for ERP systems, Business Mission Area (BMA) systems, and Warfighting Mission Area (WMA) systems to execute business processes efficiently and effectively in support of Army warfighting operations and Title 10 responsibilities. Today, over 85% of these core Army Business Processes are accomplished manually or with tools that are end-of-life, do not meet current Cybersecurity/Technology requirements, and are hosted on disparate technology platforms that are unable to be integrated. GFIM will provide an integrated planning, programming, and production capability to dynamically develop, design, and document an Army at rest and an Army in motion. GFIM will evolve both long-term and immediate bridging solutions that integrate and automate Army operational business processes. The GFIM components will provide the Army with a functional and integrated transactional platform that creates and develops the requisite force structure, deployment, redeployment, retrograde, and readiness data needed to man, equip, train, ready, and resource the force and feed the Army's ERPs and Non-

# UNCLASSIFIED

<b>Exhibit R-2A, RDT&amp;E Project Justification:</b> PB 2026 Army		<b>Date:</b> June 2025
<b>Appropriation/Budget Activity</b> 2040 / 5	<b>R-1 Program Element (Number/Name)</b> PE 0605013A / <i>Information Technology Development</i>	<b>Project (Number/Name)</b> T05 / <i>Army Business System Modernization Initiatives</i>
<p>ERPs in support of multi-domain operations. The result will be an interoperable, collaborative environment to enable the seamless creation and exchange of authoritative data across the operational community of practice to provide rapid, accurate, and auditable outcomes that will support risk-informed senior leader decisions.</p> <p>FY 2026 RDTE funding in the amount of \$12.834 million will be used to continue development of the GFIM Objective Environment (OE) to provide an automated global force management solution for the Army's Deploy to Redeploy and Retrograde (D2RR) business process. The GFIM capability will deliver an enterprise solution that will more efficiently and effectively align and prepare forces and infrastructure, conduct mobilization, deployment, and employment activities, as well as re-deployment and demobilization activities.</p> <p>3. Installations, Energy, and the Environment (IEE) EBS BUILDER and PAVER DoD requires a standardized, auditable, process for facility condition assessments and the calculation of deferred maintenance. The DoD uses the Sustainment Management System (SMS) to conduct real property condition assessments, identify work requirements, and report on real property asset conditions. SMS provides a consistent baseline for condition assessment of all assets across DoD. This effort develops interfaces with EBS-C within the Army's Enterprise Business System Multi-Functional Capabilities Team (EBS-MFCT) for IEE domain related to construction and real property. This effort develops and integrates modules for buildings (BUILDER) and pavement (PAVER) to modernize and consolidate these modules so that installations can manage all assets in a single enterprise system called Enterprise SMS (ESMS).</p> <p>The Enterprise Sustainment Management System (ESMS) Web Application is a cloud-based solution, bringing all real property infrastructure domains under the umbrella of a single SMS application. Performing long-range work requirements projections across all SMS domains allows for a comprehensive analysis of various courses of action and the related effects and tradeoffs of each decision. In addition to the incorporation of all SMS domains in a single application. The ESMS application provides increased control of user permission definition, teaming, and how permissions are applied; updated business intelligence reporting capabilities; and improved user experience, leveraging state of the art web development techniques for more efficient use from beginning to end. ESMS helps all real property asset management stakeholders - from civil engineers, technicians and managers to headquarters - decide when, where and how to best maintain existing infrastructure. Because assets are so vast and diverse, a "knowledge-based" philosophy drives the SMS process.</p> <p>FY 2026 Base dollars in the amount of \$1.455 million will continue development of ESMS to optimize assessments for Pavement, Utilities, Rails, and other facility types.</p> <p>4. The Army Vantage Program is a data integration and visualization platform that enables the Army to "see itself" by providing Senior Leaders, Soldiers, Staff, and analytic communities with a common, integrated data platform to visualize and analyze the current and predicted future state(s) of the Army. It spans all data domains, powers a set of configurable views, and provides tools for making data-driven decisions at every level of the Army. The features and advantages of the platform allow the Army to (1) see itself clearly through its data, (2) meet its strategic modernization objectives, and (3) rapidly realize ROI.</p> <p>FY 2026 Base dollars in the amount of \$2.925 million will continue effort(s) to mitigate risk with enterprise data platform migration, pilot an open architecture universal data connection adapter to broker data with legacy systems, and further support the Army CIOs Application Programming Interface (API) layer enabling the enterprise data mesh construct. Additionally, investigate and test new technologies to be incorporated into Army Vantage to align with Army's Digital Modernization efforts.</p>

<p>5. Army Energy and Water Reporting System (AEWRS) is used to collect rollups of energy/water usage and program management at Army installations. AEWRS is the Army's official database of record for all energy and water usage data, and energy program management information. It provides the basis for documenting Army progress in meeting statutory and mandated performance metrics. Data is passed other systems and to DOD to be joined by similar energy and water data from the other services. AEWRS incorporated as a module the Solid Waste Annual Reporting for the Web (SWARWeb) which is the Army's official database of record for solid waste management and recycling data at the Installation, Subordinate Command, Major Command, Region and Army levels. Data is collected for disposal sites, disposal and recycling transactions, recycling revenues and recycling program management. Solid waste data collected throughout the fiscal year is submitted to higher command levels to fulfill reporting requirements and to track compliance with DoD waste reduction/recycling goals.</p> <p>FY 2026 Base dollars in the amount of \$0.868 million will continue to modernize application software for the AEWRS from earlier software to improve its risk management posture, as well as providing additional mandated reporting capabilities required by revised statutes and federal/DoD policies.</p> <p>6. The Enterprise Exceptional Family Member Program (E-EFMP) System streamlines enrollment, provides transparency, and synchronizes assignment coordination and Family support access, as the official EFMP system of record. E-EFMP supports Active Duty, Guard, and Reserve Soldiers. E-EFMP supports integration of data for the Office of the Surgeon General (OTSG), Medical Command (MEDCOM), Human Resource Command (HRC), Installation Management Command (IMCOM), and connects to Defense Enrollment Eligibility Reporting System (DEERS) and Integrated Personnel and Pay System - Army (IPPS-A).</p> <p>This subline has no funding after FY 2024.</p>					
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
Title: Enterprise Business Systems - Convergence (EBS-C)			31.630	41.819	64.905
Description: SAP announced that SAP would be moving to the next generation software, S4/HANA, as a replacement of the current software, ECC. As part of the risk reduction efforts, the Army is executing an Other Transaction Authority (OTA) to identify a Technical Integration Provider or multiple providers to support the development of the EBS-C solution. The in-scope Defense Business Systems (DBS) for this effort include GFEBS and GFEBS-SA, LMP, GCSS-Army, AESIP Hub, and numerous non-ERP systems performing needed logistics and financial functions. The Army is working EBS-C requirements to improve process agility and cross-process integration, provide consistent user experiences with an intuitive user interface, and improve data integrity and security. At the enterprise level, EBS-C seeks to integrate financial and logistics processes and create opportunities to decrease overall DBS redundancies and duplications existing in the Army portfolio.					
FY 2025 Plans: Acquisition Activities = \$9.283 million Acquisition activities for this BCAT Level 1 program continue the transition to the Software Acquisition Pathway which is planned for in FY 2024. The acquisition activities ensure the development of key acquisition pathway documentation in support of milestones and leadership execution checkpoints. In addition, the creation and support of multiple support contract awards for various technical support services, Agile implementation support, and software licensing agreements. Other key business

The program is scaling from three small agile prototyping teams to up to ten full agile development teams, focused on developing and deploying the MVCRR.</p>					
<p><b>Title:</b> Global Force Information Management (GFIM)</p> <p><b>Description:</b> GFIM will provide the Army an integrated, interoperable, and authoritative global force management transactional capability for lifecycle management of global force/organizational structure data for the entire Army. This effort is in direct support of dynamic force structure and dynamic force employment as directed in the National Defense Strategy. GFIM will establish a common standard for force structure data by implementing OSD's Global Force Management-Data Initiative (GFM-DI) directive and Army Data Standard. GFIM will replace the capabilities of 14 legacy systems and 26 subsystems that support the Army's end to end (E2E) business processes for Deploy to Redeploy and Retrograde of Materiel (D2RR). GFIM awarded an OTA Agreement for a Phase 1 Minimum Viable Product (MVP) (Develop the Future Force) and Phase 2 prototype (Provide the Current Force) activities. The OTA will also establish an IL5 and IL6 cloud environment and integrate with the other two components of the GFIM Objective Environment (OE) (D2RR Data Lake and Analytical Tool) to ensure an integrated and inter-operable environment is delivered and the Army can sunset legacy systems.</p> <p><b>FY 2025 Plans:</b> FY 2025 funding will be used to continue development of the GFIM Objective Environment (OE) to provide an automated global force management solution for the Army's Deploy to Redeploy and Retrograde (D2RR) business process. Activities include development and initial deployment of the Provide the Current Force (PCF) capability as well as bring the Define the Future Force (DFF) Minimum Viable Capability Release (MVCRR) to a production ready and deployable state. These capabilities will deliver an enterprise solution that will more efficiently and effectively align and prepare forces and infrastructure, conduct mobilization,</p>			20.328	12.024	12.834

deployment, and employment activities, as well as re-deployment and demobilization activities. The program is utilizing the Scaled Agile Framework (SAFe) development methodology enabling incremental release of capability to the user community. We will continue to deliver capability in alignment with Army goals for future sunset of legacy Force Management systems, target first quarter FY 2027.  <b>FY 2026 Plans:</b> FY 2026 funding will be used to award a Development OTA and continue development of the GFIM Objective Environment (OE), to include divestiture of Army Organization Structure (AOS), Force Management System (FMS), FMSweb in FY26. Additionally, program will continue to focus on migrating over reporting capabilities over to Army Vantage.  These capabilities will deliver an enterprise solution that will more efficiently and effectively align and prepare forces and infrastructure, conduct mobilization, deployment, and employment activities, as well as re-deployment and demobilization activities.  <b>FY 2025 to FY 2026 Increase/Decrease Statement:</b> In FY25 to FY26, funding nominally increases \$0.810M (6.7%) to cover slight increased RDTE effort.				
<b>Title:</b> IEE EBS BUILDER and PAVER  <b>Description:</b> In FY 2025, this effort develops and integrates domains within a single enterprise system called Enterprise Sustainment Maintenance System (ESMS) to conduct condition and functionality assessment for all facilities, including for buildings (BUILDER) and pavement (PAVER). This effort also develops interfaces related to construction and maintenance of real property with the Enterprise Business Systems-Convergence (EBS-C) within the Army's Enterprise Business System Multi-Functional Capabilities Team (EBS-MFCT) for Installations, Energy, and the Environment (IEE) domain.  <b>FY 2025 Plans:</b> Continue development of ESMS to optimize assessments for pavement, utilities, rails, and other facility types.  <b>FY 2026 Plans:</b> Continue development of ESMS to optimize assessments for pavement, utilities, rails, and other facility types.  <b>FY 2025 to FY 2026 Increase/Decrease Statement:</b> FY 2026 funding decreases \$1.830 million due to reduction in requirements of non-audit defense business systems.		2.553	3.285	1.455
<b>Title:</b> Army Vantage  <b>Description:</b> The Army Vantage Program is a data integration and visualization platform that enables the Army to "see itself" by providing Senior Leaders, Soldiers, Staff, and analytic communities with a common, integrated data platform to visualize and analyze the current and predicted future state(s) of the Army. It spans all data domains, powers a set of configurable views, and		2.903	3.006	2.925

provides tools for making data-driven decisions at every level of the Army. The features and advantages of the platform allow the Army to (1) see itself clearly through its data, (2) meet its strategic modernization objectives, and (3) rapidly realize ROI.					
<b>FY 2025 Plans:</b> FY 2025 funding will be used to continue effort(s) with ADVANA to mitigate risk with enterprise data platform migration, pilot an open architecture universal data connection adapter to broker data with legacy systems, and further support the Army CIOs API layer enabling the enterprise data mesh construct. The features and advantages of the platform allow the Army to (1) see itself clearly through its authoritative data, (2) meet its strategic modernization objectives, and (3) rapidly realize ROI through data transparency, data sharing through the Vantage Common Data Platform, and allowing for a consistent and unified analytical tool set for the Army enterprise.					
<b>FY 2026 Plans:</b> FY 2026 funding will be used to continue effort(s) to mitigate risk with enterprise data platform migration, pilot an open architecture universal data connection adapter to broker data with legacy systems, and further support the Army CIOs API layer enabling the enterprise data mesh construct. The features and advantages of the platform allow the Army to (1) see itself clearly through its authoritative data, (2) meet its strategic modernization objectives, and (3) rapidly realize ROI through data transparency, data sharing through the Vantage Common Data Platform, and allowing for a consistent and unified analytical tool set for the Army enterprise. RDTE will also be used for modernization efforts to include a commercial data connection adapter, supporting API pilots, and throughout the POM to prototype new technology for potential incorporation to the platform. Follow on capability will take the current platform and move it forward aligning with the digital transformation and UDRA guidance from the Senior Leaders. Additionally, the Army will be looking into extending the capability through a multivendor approach focused on platform, services and tools to enable greater efficiencies and cost savings.					
<b>FY 2025 to FY 2026 Increase/Decrease Statement:</b> FY 2026 funding decreases \$0.073 million due to economic assumptions/inflation adjustments.					
<b>Title:</b> IEE EBS FOR FACILITY & ENERGY SYSTEMS (AWERS AND SWARWeb)			0.390	-	0.868
<b>Description:</b> Update application software for the Army Energy and Water Reporting System (AEWRS). AEWRS is the Army's official database of record for all energy and water usage data, energy program management information, and solid waste management/recycling program information. AEWRS provides the basis for documenting and reporting Army progress in meeting statutory and mandated performance metrics for the active Army, National Guard, Reserves at the Installation, Subordinate Command, Major Command, Region, Headquarters, and supporting organization levels. Army data is reported to DoD to be joined with similar reporting from other services and reporting agencies. AEWRS incorporated as a module the Solid Waste

**Remarks**

**D. Acquisition Strategy**

EBS-C transitioned to the Execution Phase of the Software Acquisition Pathway in Q4 FY2024 under DoD Instruction 5000.87. The Execution Phase enables the initial delivery of capability within 12 months (target for end of FY 2025) and subsequent capabilities on the EBS-C portfolio roadmap. To enable this, the Army awarded an Other Transaction Authority (OTA) to a Technical Integration Provider in late FY 2024 to support the development of the EBS-C solution. In Late FY 2025 and early FY 2026, the program plans to award a production contract to deploy / field the solution and transition to modular contracting to bring additional vendors to increase velocity and capability delivery. This approach further enables the Continuous Integration / Continuous Deployment capability pipeline rapidly deploying capability to the cloud-solution in the cArmy infrastructure.

GFIM has been designated a Defense Business System Category II program, adhering to DoDI 5000.87, the DoD policy governing acquisition of Defense Business Systems. The PMO has transitioned from the 5000.75 pathway to the 5000.87 Software Acquisition Pathway, which will align better with the use of COTS software and the Agile development methodology the PMO has implemented. The GFIM PMO utilizes an OTA vehicle for development of the GFIM Prototypes and MVCR through Q1

<b>Appropriation/Budget Activity</b> 2040 / 5	<b>R-1 Program Element (Number/Name)</b> PE 0605013A / <i>Information Technology Development</i>	<b>Project (Number/Name)</b> T05 / <i>Army Business System Modernization Initiatives</i>

FY 2025. GFIM will provide the Army an enterprise, integrated authoritative force management capability for lifecycle management of force/organizational structure data for the total force. In addition, it will establish a common data standard for force structure data by implementing the Global Force Management - Data Initiative (GFM-DI).

Army Vantage is following the Business Capability Acquisition Cycle and is expected to be a BCAT II program. As a part of risk reduction efforts in the transition of the Other Transaction Authority (OTA) Army Vantage pilot, FY 2025 RDTE will be used to continue effort(s) with the ADVANA Army Community, pilot an open architecture universal data connector adapter to broker data with legacy systems, and further support the Army Chief Information Officer's (CIO) API layer pilots informing the enterprise data mesh construct.

**Note**

Project was renamed from Army Safety Management Information System - Revised (ASMIS-R) to Army Safety Management Information System 2.0.

**A. Mission Description and Budget Item Justification**

The Army Safety Management Information System (ASMIS) 2.0 is the Army's designated system of record for Army Safety and Occupational Health (SOH) data collection, information management, decision support, and reporting. It is built to holistically support the information management needs of the Army SOH program in accordance with Public Law 91-596, Executive Order 12196, DoDI 6055.01, The Army Strategy LOE 1: Build Readiness, LOE 2: Modernize, AR 385-10, and Assistant Secretary of the Army - Installations, Energy and Environment strategic guidance.

ASMIS 2.0 enables commanders and Army senior leaders to use data collected via these six key capabilities and other DoD data sources to prevent accidental losses, reduce associated costs, and enhance readiness. ASMIS 2.0 currently interfaces with 9 DoD systems and will interface with 22 upon completion. It directly supports the Warfighter through improved IT-enabled business processes and enterprise data analytics to enhance decision-making at all levels of the Army through greater use of leading indicators. In support of the Army Data Strategy, ASMIS 2.0 enables the Army to make SOH data visible, accessible, understandable, linked, trustworthy, interoperable, and secure (VAULTIS). Beyond the cost avoidance and reduction achieved by loss prevention, ASMIS 2.0 provides additional cost savings by eliminating 11 legacy systems.

In FY 2026, we plan to develop and field two key capabilities: (1) the Occupational Health/Medical Surveillance module, and (2) the Safety & Occupational Health Expense and Budget Management capability.

**B. Accomplishments/Planned Programs (\$ in Millions)**

	<b>FY 2024</b>	<b>FY 2025</b>	<b>FY 2026</b>
<b>Title:</b> ASMIS-R Development	3.151	3.170	1.459
<b>Description:</b> ASMIS 2.0 provides a framework of people, processes, and technology to synchronize, integrate and optimize Army SOH capabilities to preserve war fighting capabilities and enhance the force by providing a safe and healthy environment for Soldiers, Families, Civilians, and contractors. An analysis of Army SOH DOTMLPF-P in 2015 determined that the legacy system, a Defense Business System, was not able to satisfy current and emerging SOH capability requirements without modernization to resolve these capability gaps. Changes in requirements for the Army Safety and Health Management System (Programmatic) related to DoDI 6055.01, AR 385-10, Information Assurance requirements and direct feedback from the Safety professionals within the DoD and the Army have resulted in the need for changes in associated business processes. Additionally, a business gap analysis performed by the ASA(ESOH) revealed a deficiency in the system's requirements that would support

<b>Exhibit R-2A, RDT&amp;E Project Justification:</b> PB 2026 Army		<b>Date:</b> June 2025	
<b>Appropriation/Budget Activity</b> 2040 / 5	<b>R-1 Program Element (Number/Name)</b> PE 0605013A / <i>Information Technology Development</i>	<b>Project (Number/Name)</b> VR3 / <i>ASMIS-R (REPORTIT)</i>	
<b>B. Accomplishments/Planned Programs (\$ in Millions)</b>		<b>FY 2024</b>	<b>FY 2025</b>
<p>Army Commands in identifying hazards in the workplace, determining hazard mitigation strategies and controls, employing these strategies and controls, and measuring their potential for reducing mishaps. Addressing these problems will have an immediate and direct impact on meeting regulatory requirements, improving data integrity, improving information assurance posture (compliance), increasing the Army's ability to reduce mishaps across the force structure, and promoting ARFORGEN capabilities.</p> <p><b>FY 2025 Plans:</b> In FY 2025, the Explosives Safety Management Module is being developed as a component within the SOH Program Management module. This capability will encompass all aspects of explosives safety to include explosives site plan management, storage, disposal, and all workflows necessary to support those activities across the Army. We are also completing the SOH Training and Education module as the fifth key module of the ASMIS 2.0 family of systems.</p> <p><b>FY 2026 Plans:</b> In FY 2026, two capabilities are scheduled for implementation. Both of them are major deliverables and each brings benefit to the Army:</p> <p>1. ASMIS 2.0 Occupational Health/Medical Surveillance module. This module is the final of six distinct capabilities within the ASMIS 2.0 family of systems. It enables the Army to track and measure exposure to hazards that exist as the result of an individual's job series, location, and nature of work. This element of Occupational Health is not currently supported across the Army and we are therefore unable to effectively track medical appointments that occur to either prevent exposures or treat exposures after the fact. The ability to measure and track these events, their impact to Army Safety &amp; Occupational Health (SOH), and the cost incurred by the Army as a result is a critical element of management of the Army's SOH program, as directed via the DoDi 6055-01 and AR 385-10.</p> <p>2. ASMIS 2.0 Safety &amp; Occupational Health Expense and Budget Management. The Deputy Assistance Secretary of the Army for Environmental Safety and Occupational Health (DASA ESOH) is responsible for tracking all expenditures for Safety &amp; Occupational Health related expenditures across the Army annually to support planning and oversight of the abatement of hazards and other unsafe conditions. Currently, there is not an integrated, centralized capability that enables this tracking at the Army level. This capability will allow agencies and units to report these expenditures, track them to their annual budgets, and this data will automatically aggregate, regardless of PEG or MDEP, to enable leadership to make better decisions and to enable the DASA ESOH to manage the needs at the Army level</p> <p><b>FY 2025 to FY 2026 Increase/Decrease Statement:</b></p>

D. Acquisition Strategy				
ASMIS 2.0 is comprised of six distinct capabilities, as outlined on the previous page, and each of these is being developed incrementally with a strategic sequencing that enables the primary data collection modules to be completed first with the risk analysis and program management modules executed subsequently.				
The acquisition strategy employed is executed in compliance with Title 10, U.S.C. 2222 and follows the Capability Requirements Document (CRD) methodology. Implementation and management is provided via a base plus 4-year contract.				
Acquisition is executed and managed by the USACRC Program Management Office (PMO) and the organization is directly engaged with its Contracting Office and Contracting Office Representative.

**A. Mission Description and Budget Item Justification**

The Integrated Personnel and Pay System-Army Increment II (IPPS-A Inc II) provides an integrated, multi-Component, personnel and pay system that streamlines existing Human Resources (HR) systems and processes by enhancing efficiency and accuracy of personnel and pay procedures in support of 1.1 million Soldiers. This program is an essential building block to reform the Department of the Army towards achieving greater performance and affordability in support of the National Defense Strategy and the Congressional audit mandate.

The IPPS-A program to date has completed a phased deployment of Military Human Resource and talent management capabilities across all Army components (Active, Guard and Reserve). This includes all Army National Guard units in the 54 states and territories into one single solution. The program has subsumed 120 systems/instances and six partial capabilities bringing the Army's total military force into a single HR authoritative system.

In accordance with the Acquisition Strategy approved by the Army Acquisition Executive on 21 June 2022, the program office will incrementally release Army Military Payroll, additional Human Resource (HR) Capabilities (e.g., Archiving, Talent and Strength Management, and Audit), and HR Enhancements to the deployed baseline. In 4QFY24, IPPS-A began migration from the legacy infrastructure hosting solution with Defense Information Systems Agency (DISA) to a Cloud Hosting solution. As part of our transition from Waterfall Development to an Agile Development Framework, the program is transitioning to the Software Acquisition Pathway. In 1QFY25, the program awarded the Solution Provider bridge contract to enable competition for the new Product Support and Delivery contract to be awarded in 1QFY26 that provides maintenance and system enhancements enabling subsumption of legacy systems.

FY 2026 Base dollars in the amount of \$164.600 million supports Agile software development and incremental delivery of additional capabilities for Army Military Payroll as well as additional HR capabilities to enable subsumption of 18 full and four partial additional legacy systems. These funds will continue cloud migration prior to the legacy DISA infrastructure end of life in FY28. These critical investments support the Army to be audit ready and achieve cost savings through cloud migration, legacy system subsumption and delivery of the Army Military Payroll capability. Funds also support other enabling infrastructure and software upgrades to include support for Identity, Credential, Access Management (ICAM) implementation achieving zero-trust compliance. In 1QFY26, the program will award the new Product Support and Delivery contract that provides maintenance and system enhancements enabling subsumption of legacy systems.

**Remarks**

B66706000 (Other Procurement, Army) FY 2025 Base procurement dollars in the amount of \$5.430 million support training and training tools for the IPPS-A solution with 1.1 million users. Funds support training for the Army Military Payroll solution and Human Resource Enhancements which provides the delivery of new and updated training products and training teams, delivering both virtual and on-site support across the Army to assist end-user training and adoption for enhanced and new capabilities. For FY 2026, program has no OPA requirement.

432612000 (Operation and Maintenance, Army (OMA)) funding supports overall software system sustainment including Help Desk support (Tier I through Tier II), system maintenance break/fixes, minor enhancements, software licenses, cyber compliance, program office contractor support, civilian salaries, DISA and migration to Cloud Hosting, and program office operations. IPPS-A now supports 1.1 million system users as of January 17, 2023.

**D. Acquisition Strategy**

The Integrated Personnel and Pay System-Army Increment II (IPPS-A Inc II) provides an integrated, multi-Component, personnel and pay system that streamlines existing Human Resources (HR) systems and processes by enhancing efficiency and accuracy of personnel and pay procedures in support of 1.1 million Soldiers.

**UNCLASSIFIED**

<b>Exhibit R-2A, RDT&amp;E Project Justification:</b> PB 2026 Army		<b>Date:</b> June 2025
<b>Appropriation/Budget Activity</b> 2040 / 5	<b>R-1 Program Element (Number/Name)</b> PE 0605018A / <i>Integrated Personnel and Pay System-Army (IPPS-A)</i>	<b>Project (Number/Name)</b> ED9 / <i>Integrated Personnel and Pay System - Army Inc 2</i>
<p>The IPPS-A program achieved a Milestone B on 14 December 2014 under the authority of Department of Defense Instruction (DODI) 5000.02. The program transitioned to a Priority Defense Business System Category I (BCAT I) under the authority of the DODI 5000.75 and has implemented a tailored Acquisition approach for Defense Business Systems. In accordance with the Acquisition Strategy approved by the Army Acquisition Executive on 21 June 2022, the next major software capabilities, (previously referred to as Release 4) are Army Military Payroll, HR Enhancements, and Cloud Migration. On 25 July 2023, the Army Acquisition Executive (AAE) ordered IPPS-A to start work on Army Military Payroll (AMP) with Peoplesoft Global Payroll as the technical solution. In Dec 2024, the AAE concurred with IPPS-A's request to move to the software acquisition pathway (SWP) to better align with its current agile release cadence. In Feb 2025, the acquisition decision memorandum was signed allowing for IPPS-A to prepare for transitioning to the SWP, and to return NLT DEC 2025 for final authority to proceed.</p> <p>The program transitioned from waterfall development to agile development to better execute software development and fielding. The program has implemented the Scaled Agile Framework (SAFe) 6.0 and organized into multiple Agile Release Trains (ARTs) for the Baseline work, Army Military Payroll (AMP) effort, and supporting development across both Agile Release Trains. Both ARTs operate under a Solution Train in 13-week Planning Increments with five, 2-week development sprints and one, 3-week innovation and planning sprint. This structure affords the program the necessary flexibility while maintaining a common vision and a requirements management process to incrementally build, test, and deliver valuable and quality software to the Army's 1.1 million Soldiers.</p> <p>The IPPS-A program awarded the AMP development contract on 12 July 2024. AMP capabilities will be delivered incrementally beginning with limited capability and working towards Active Duty payroll. This will allow the program to deliver a minimum viable product that it can incrementally build upon. The first capability groupings will be one-time payments including death gratuity, temporary lodging allowance, and adoption reimbursement delivered throughout FY25 and into FY26. The program will follow with Reserve Component payroll in FY26/FY27 and Active Duty payroll in FY28/FY29.</p> <p>The IPPS-A program awarded a Joint Warfighting Cloud Capability (JWCC) contract in 4QFY24 to support a major cloud migration effort, including applications and data migration, re-platforming, and cybersecurity accreditation. The effort will modernize IPPS-A infrastructure and provide next generation technologies to increase development velocity, improve software quality, enhance system performance, and reduce total lifecycle costs. New cloud-based development and test environments will provide foundational capabilities necessary to support AMP development, integration, and testing beginning in FY25.</p> <p>In 1QFY25, the program awarded the Solution Provider bridge contract for enabling integration of the baseline IPPS-A software with the new cloud environments and AMP. The IPPS-A program is currently conducting a full and open competition for a new Product Support and Delivery contract in 1QFY26.</p>

## Note

Joint Tactical Networking Center (JTNC) is funded using a Joint budget strategy. Each Military Department (MILDEP) contributes one-third of total program Research Development Test & Evaluation (RDT&E) requirements for joint efforts. Funding reflects the full Army requirement with consolidated funding from Air Force and Navy for the JTNC.

PB25 lock realigned funding from Navy PE 0605030N and Air Force PE 0605030F to Army PE 0605030A for execution.

## A. Mission Description and Budget Item Justification

This program aligns with Army 2030/40 priorities.

This funding supports Joint and Next Generation Command and Control (NGC2) initiatives to modernize Command and Control (C2) systems.

The Joint Tactical Networking Center (JTNC) is chartered to enable the Department of Defense (DoD)'s rapid identification, characterization, procurement, fielding, and sustainment of modular, innovative tactical communications products that ensure secure, interoperable, and resilient Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR) capabilities. The JTNC provides technical expertise to facilitate tactical communications management, innovation, and standardization. The JTNC: (1) maintains a cyber-hardened DoD Information Repository (IR), (2) provides Technical Analyses/Capability Characterizations on tactical communications products, (3) provides Open Systems Architecture Standards, (4) provides exportability analysis and licensing reviews, and (5) serves as Technical Advisor to the Communications, Command, and Control Leadership Board (C3LB) and Tactical Communications Senior Steering Group (TCSSG).

JTNC mission is executed in coordination with key government stakeholders to include: C3LB, TCSSG, Communications Technologies and Waveforms Working Group (CTWWG), Resiliency Sub-Working Group (RSWG), the Department of Defense (DoD) Chief Information Officer (CIO), Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)), Joint Staff J6 (JS J6), the Under Secretary of Defense for Research and Engineering USD(R&E), and the Services. Particular attention is paid to ensuring that interagency work is collaborative and eliminates duplicative capability. The JTNC enables a common software baseline that is hardware agnostic leading to increased competition for Software Defined Radios (SDR).

Current JTNC directed requirements, outlined by the C3LB, consist of the CTWWG, Joint All-Domain Command and Control (JADC2) support, development/maturation of the DoD IR framework & Cloud migration, and development of the Joint Communications Marketplace (JCM) to meet DoD and Industry requirements in conjunction with DoD Instruction 4630.09. Through collaboration with USD R&E (INSS) and industry partners, JTNC is in the process of capturing information on resilient waveform

technologies and portfolio products. The ultimate goal is to expedite market research activities by collecting, analyzing, and making data available in support of emerging Government waveform acquisitions. The JTNC and Joint Interoperability Test Command (JITC) co-chair the High-Frequency Interoperability and Architecture Sub-Working Group (HF I&A SWG) to resolve HF 3G and 4G interoperability issues, thus facilitating next-generation HF systems. The JTNC HF team is also pathfinding for a new tactical MIL-STD to provide more resilient communications. Additionally, the JTNC is engaged in the analysis of software artifacts involving high assurance devices, such as Software Defined Radios (SDR) ported with specific waveforms to support National Security Agency (NSA) efforts. The JTNC participates in Standards-related activities such as the Interface Control Working Group (ICWG) and has been collaborating with the Army on the development of C4ISR/Electronic Warfare Modular Open Suite of Standards (CMOSS) specifications. Finally, the JTNC continues evolving its Waveform Assessment and Milestone Review (WASMR) and Capability Characterization processes.						
The FY 2026 request was reduced by \$0.167 million for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative."						
B. Program Change Summary (\$ in Millions)		FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
Previous President's Budget		18.662	20.191	20.605	-	20.605
Current President's Budget		17.981	20.191	20.954	-	20.954
Total Adjustments		-0.681	0.000	0.349	-	0.349
• Congressional General Reductions		-	-			
• Congressional Directed Reductions		-	-			
• Congressional Rescissions		-	-			
• Congressional Adds		-	-			
• Congressional Directed Transfers		-	-			
• Reprogrammings		-	-			
• SBIR/STTR Transfer		-0.681	-			
• Adjustments to Budget Years		-	-	0.349	-	0.349
Change Summary Explanation						
Increase is related to the requirement to develop and migrate DoD IR and JCM to IL5/IL6 cloud environments in support of DoD CIO objectives.

## Note

Joint Tactical Networking Center (JTNC) is funded using a Joint budget strategy. Each Military Department (MILDEP) contributes one-third of total program Research Development Test & Evaluation (RDT&E) requirements for joint efforts. Funding reflects the full Army requirement with consolidated funding from Air Force and Navy for the JTNC.

PB25 lock realigned funding from Navy PE 0605030N and Air Force PE 0605030F to Army PE 0605030A for execution.

## A. Mission Description and Budget Item Justification

The Joint Tactical Networking Center (JTNC) is chartered to enable the Department of Defense (DoD)'s rapid identification, characterization, procurement, fielding, and sustainment of modular, innovative tactical communications products that ensure secure, interoperable, and resilient Command, Control, Communications, Computers, Intelligence, Surveillance, and Reconnaissance (C4ISR) capabilities. The JTNC provides technical expertise to facilitate tactical communications management, innovation, and standardization. The JTNC: (1) maintains a cyber-hardened DoD Information Repository (IR), (2) provides Technical Analyses/Capability Characterizations on tactical communications products, (3) provides Open Systems Architecture Standards, (4) provides exportability analysis and licensing reviews, and (5) serves as Technical Advisor to the Communications, Command, and Control Leadership Board (C3LB) and Tactical Communications Senior Steering Group (TCSSG).

JTNC mission is executed in coordination with key government stakeholders to include: C3LB, TCSSG, Communications Technologies and Waveforms Working Group (CTWWG), Resiliency Sub-Working Group (RSWG), the Department of Defense (DoD) Chief Information Officer (CIO), Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)), Joint Staff J6 (JS J6), the Under Secretary of Defense for Research and Engineering, USD(R&E), and the Services. Particular attention is paid to ensuring that interagency work is collaborative and eliminates duplicative capability. The JTNC enables a common software baseline that is hardware agnostic leading to increased competition for Software Defined Radios (SDR).

Current JTNC directed requirements, outlined by the C3LB, consist of the CTWWG, Joint All-Domain Command and Control (JADC2) support, development/maturation of the DoD IR framework & Cloud migration, and development of the Joint Communications Marketplace (JCM) to meet DoD and Industry requirements in conjunction with DoD Instruction 4630.09. Through collaboration with USD R&E (INSS) and industry partners, JTNC is in the process of capturing information on resilient waveform technologies and portfolio products. The ultimate goal is to expedite market research activities by collecting, analyzing, and making data available in support of emerging Government waveform acquisitions. The JTNC and Joint Interoperability Test Command (JITC) co-chair the High-Frequency Interoperability and Architecture Sub-Working Group (HF I&A SWG) to resolve HF 3G and 4G interoperability issues, thus facilitating next-generation HF systems. The JTNC HF team is also pathfinding for a new tactical MIL-STD to provide more resilient communications. Additionally, the JTNC is engaged in the analysis of software artifacts involving high assurance devices,

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Title: DoD Waveform IR Support, Waveform Standards Evolution and Compliance & Certification Analysis		17.981	20.191	20.954
Description: Joint Tactical Networking Center (JTNC) aligns with the Communications, Command, and Control Leadership Board (C3LB), DoD Chief Information Officer (CIO), Joint Staff, the Services, and other key stakeholders for those JTNC chartered processes that ensure secure, interoperable, and resilient tactical communications. The JTNC provides technical expertise to facilitate tactical communications management, innovation, and standardization. The JTNC: (1) maintains a cyber-hardened DoD Information Repository (IR), (2) provides Technical Analyses/Capability Characterizations on tactical communications products, (3) provides Open Systems Architecture Standards, (4) provides exportability analysis and licensing reviews, and (5) serves as Technical Advisor to the Communications, Command, and Control Leadership Board (C3LB) and Tactical Communications Senior Steering Group (TCSSG). The Joint Tactical Networking Center aligns with Army 2030/40 priorities.				
FY 2025 Plans: JTNC will continue to serve as Chair of the Communications Waveforms and Technologies Working Group (CTWWG), supporting both TCSSG and C3LB efforts towards managing Joint warfighter challenges and fielding tactical communications solutions. JTNC will continue technical analysis efforts for C3LB approved waveforms, in accordance with Service priorities and the FY 2025 JTNC Management Plan. The JTNC will continue to support both the Services and Principal Staff Assistant (DoD CIO) in oversight of Lead Service activities as Technical Advisor, assisting in the identification and resolution of cross-service networking disconnects. The JTNC will remain engaged in Joint All Domain Command and Control (JADC2) Operational Planning Teams/ systems engineering support across the Services. The JTNC, through the efforts of the CTWWG's Resiliency Sub-Working Group, will coordinate and socialize resiliency terminology, processes, and support resources to design, test, compare, and field tactical radio products most capable of mitigating adversary detection, interception, geolocation, and jamming threats. The JTNC will continue managing and maintaining the DoD Information Repository (IR), providing controlled access for proprietary and nonproprietary waveforms and associated tactical communications products. The JTNC will enhance DoD IR capabilities by evolving framework compliance and Cloud migration.				
The JTNC will continue Joint Communications Marketplace (JCM) development to meet DoD and Industry requirements in conjunction with DoD Instruction 4630.09. The JTNC will manage evolution of the JCM to provide value-added collaborative environment tools, enabling Government and Industry to share information on innovative technologies and DoD capability gaps leading to rapid acquisition efforts to meet warfighter needs. JCM capabilities/communities will continue to support PEO C3T and Network Cross-Functional Team (N-CFT) requirements for Industry engagement, Technical Exchange Meetings (TEMs),

FY25 to FY26 increase is related to the requirement to develop and migrate DoD IR and JCM to IL5/IL6 cloud environments in support of DoD CIO objectives.			
<b>Accomplishments/Planned Programs Subtotals</b>		17.981	20.191
<b>C. Other Program Funding Summary (\$ in Millions)</b> N/A			
<b>Remarks</b> JTNC operates based on a Joint Funding Strategy, there is no prior year funding for JTNC in the other Service lines. JTNC funding has been consolidated in Army PE 0605030A for execution.			
<b>D. Acquisition Strategy</b> The Joint Tactical Networking Center (JTNC) is a Joint support program to the Services, the DoD Chief Information Officer (CIO), the Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)), and USD Research and Engineering (USD(R&E)). JTNC core functions as defined in the JTNC Acquisition Decision Memorandum and Charter signed on 20 January 2014 and revalidated on 13 September 2019 include execution in the following areas: Information Repository, Technical Analysis, Open Systems Architecture Standards, Exportability Analysis and Licensing Review, and Technical Advisor to the C3LB. The services derived from these core functions reinforce an acquisition environment which ensures that interoperable, secure, and resilient joint tactical waveforms and wireless communications applications can operate in a variety of hardware transport solutions.  The FY 2026 Budget supports continued development/maturation of the DoD IR, analysis of directed software and artifacts, support of the National Security Agency (NSA) Commercial Communications Security (COMSEC) Evaluation Program (CCEP), JTNC Standards Interface Control Working Group (ICWG), the Capabilities Characterization and Joint Communications Marketplace (CC & JCM). The FY 2026 budget supports the Lead Service Initiative where JTNC will serve as a technical advisor and source of engineering and analytic resources in the conduct of Joint enterprise-level systems engineering and analysis and support DoD CIO. The FY 2026 budget supports the continued management of Joint warfighter challenges and solutions as assigned by the TCSSG. The FY 2026 budget supports Modular Radio Architecture (MRA) work, where JTNC will lead development and promulgation of a framework containing a collection of DoD standards and a description or architecture of how to use these to compose or control a communications system. The MRA defines how to implement a communications system or radio on select platforms.

## **A. Mission Description and Budget Item Justification**

This funding supports Joint and Next Generation Command and Control (NGC2) initiatives to modernize Command and Control (C2) systems.

EF5 project: The Joint Enterprise Network Manager (JENM) / Joint Network Management Software for Radio Terminals provides a single, converged network management tool allowing the Warfighter to plan, configure, load, and manage the Joint Services' Tactical Radios and their networks in the field - a capability not available in legacy planning systems. Funding supports the full suite of Software defined radios across the services, enabling them to utilize Mobile Ad Hoc Networking (MANET) and other waveforms to include: Mobile User Objective System (MUOS), TrellisWare Scalable Manet (TSM), Warrior Robust Enhanced Network (WREN), Warrior Robust Enhanced Network-Narrowband (WREN-NB), Demand Assigned Multiple Access (DAMA) Satellite Communications (SATCOM), Integrated Waveform (IW), VHF-UHF Line Of Sight (VULOS), Second Generation Antijam Tactical UHF Radio for NATO (SATURN) and Single Channel Ground and Airborne Radio System (SINCGARS) waveform. The Network Management Software provides the Commander the ability to quickly reconfigure critical networks and enhances the S6's ability to conduct Course of Action (COA) Analysis and the Military Decision-Making Process (MDMP), providing commanders critical information regarding their ability to communicate.

EX6 project: Waveforms provides the transport technologies and capabilities necessary to support the overall connectivity of the Unified Network. Waveforms technology assessments, integration, and configuration management enable seamless updates and fluid communication between echelons of the Unified Network.

Waveforms delivers, maintains, and upgrades portable, interoperable, MANET waveforms, Advanced Networking Waveforms (ANWf), and network enterprise services in support of the Army's network modernization strategy.

Waveforms capabilities will remain agile to accommodate emerging warfighter needs by addressing the following:

(1) Waveform (WF) analysis and system engineering activities for DoD as Lead Service Activity for Ground/Line of Sight (LoS) Waveforms (currently TSM, WREN, and SINCGARS) in accordance with DoD Instruction 4630.09, Communications Waveform Management and Standardization, 23 November 2020. (2) Development and/or integration efforts of Broadcast Waveforms (i.e. SINCGARS, WREN, ANWf) and Radio Services (i.e. enterprise Over The Air Management (eOTAM)) in support of Army Network modernization, and agile mission support initiatives. (3) Viability assessments of ANWf in support of the Integrated Tactical Network (ITN) and future capability sets to ensure waveform performance in advance of formal ITN experimentation and fielding activities.

<b>Appropriation/Budget Activity</b> 2040: <i>Research, Development, Test &amp; Evaluation, Army</i> / BA 5: <i>System Development &amp; Demonstration (SDD)</i>	<b>R-1 Program Element (Number/Name)</b> PE 0605031A / <i>Joint Tactical Network (JTN)</i>
---	---

FY 2025 RDT&E dollars will fund the continued development, integration, and testing of new capabilities and waveform enhancements for SINCGARS, WREN, TSM, and ANWf. As well as fund the next generation Government developed waveforms and Radio Service applications, system and architectural engineering for ANWf radio communications technologies, post deployment software support for fielded versions of the waveforms and radio services, program management support, and examine modular and open system architectures (MOSA) to for future integration and waveform porting efficiencies.

The FY 2026 request was reduced by \$0.564 million for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative."

**Change Summary Explanation**

Joint Tactical Network (JTN) Joint Enterprise Network Manager (JENM) funding increased from FY 2025 to FY 2026 in support of new waveform development aligning to emerging joint service tactical network management requirements identified in accordance (IAW) with the Joint Network Management Software for Radio Terminals Memorandum of Agreement (MOA). FY 2026 funds represent only the Army's portion of funding. Out-year funding is programmed within the Army PE 0605031A, Navy PE 0605031N, and Air Force PE 0605031F.

Note												
Joint Tactical Network (JTN) 0605031A is funded using a Joint budget strategy. Each Military Department (MILDEP) budgets for approximately one-third of the total program RDT&E requirements for joint efforts. The original budget strategy agreement ends in FY 2026. The Army, as lead service, has coordinated with the Joint Services to establish an approved Memorandum of Agreement (MOA) that continues the joint budget strategy beginning in FY 2026. The Joint budget strategy provides annual realignments from the Navy and Air Force to the Army for execution.												
JTN funding in FY 2026 supports new waveform development, aligning to emerging joint service tactical network management requirements identified in the Joint Network Management Software for Radio Terminals MOA. Funding in FY 2026 and out reflects the Army's portion of funds. Out-year funding is programmed within the Army PE 0605031A, Navy PE 0605031N, and Air Force PE 0605031F.												
A. Mission Description and Budget Item Justification												
This funding supports Joint and Next Generation Command and Control (NGC2) initiatives to modernize Command and Control (C2) systems.												
The Joint Enterprise Network Manager (JENM) / Joint Network Management Software for Radio Terminals provides a single, converged network management tool allowing the Warfighter to plan, configure, load, and manage the Joint Services' Tactical Radios and their networks in the field - a capability not available in legacy planning systems. Funding supports the full suite of Software defined radios across the services, enabling them to utilize Mobile Ad Hoc Networking (MANET) and other waveforms to include: Mobile User Objective System (MUOS), TrellisWare Scalable Manet (TSM), Warrior Robust Enhanced Network (WREN), Warrior Robust Enhanced Network-Narrowband (WREN-NB), Demand Assigned Multiple Access (DAMA) Satellite Communications (SATCOM), Integrated Waveform (IW), VHF-UHF Line Of Sight (VULOS), Second Generation Antijam Tactical UHF Radio for NATO (SATURN) and Single Channel Ground and Airborne Radio System (SINCGARS) waveform. The Network Management Software provides the Commander the ability to quickly reconfigure critical networks and enhances the S6's ability to conduct Course of Action (COA) Analysis and the Military Decision-Making Process (MDMP), providing commanders critical information regarding their ability to communicate.												
FY 2026 funding will continue radio planner development efforts to design, engineer, integrate and test of planning and management capabilities for the Tactical Radio network in support of the Advanced Networking Waveforms (ANWf). Continued development provides further integration of the Joint Service Networks and Network Management of its emerging systems to enable Soldiers the ability to effectively manage their networks. Radio planner development efforts seek to continue development of joint service waveform support as identified in the Joint Network Management Software for Radio Terminals MOA. Planning applications are deployed on and critically tied to the Ruggedized Application Platform - Tactical Radios (RAP-TR) hardware from Division to the Company level.

**A. Mission Description and Budget Item Justification**

This funding line is directly aligned to the Army Network Modernization Priority.

This funding supports the Army's Next Generation Command and Control (NGC2) initiative to modernize Command and Control (C2) systems, Transport Layer.

This project provides the transport technologies necessary to support the overall connectivity of the Unified Network. Waveforms technology assessments, integration, and configuration management enable seamless updates and fluid communication between echelons of the Unified Network.

Waveforms delivers, maintains, and upgrades portable, interoperable, Mobile Ad-hoc Networking (MANET) waveforms, Advanced Networking Waveforms (ANWf), network management and monitoring protocols and standards, and network enterprise services in support of the ARMY network modernization strategy. These waveforms and services are deployed by technical insertion into production of, and field upgrades to, existing tactical radios.

Waveforms will remain agile to accommodate emerging warfighter needs by addressing the following:

- 1) Waveform (WF) analysis and system engineering activities for DoD as Lead Service Activity for Ground/Line of Sight (LoS) Waveforms (currently TSM), Warrior Robust Enhanced Network (WREN), and Single Channel Ground and Airborne Radio System (SINCGARS)) in accordance with (IAW) Deputy Secretary of Defense memo for Enhancing DoD's Joint Tactical Networks and Datalink Modernization, 29 March 2019
- 2) Development and/or integration efforts of Broadcast Waveforms (i.e. SINCGARS, WREN, ANWf) and Radio Services (i.e. enterprise Over The Air Management (eOTAM)) in support of Army Network modernization, and agile mission support initiatives
- 3) Viability assessments of ANWf in support of the Integrated Tactical Network (ITN) and future capability sets to ensure waveform performance in advance of formal ITN experimentation and fielding activities

FY 2026 RDT&E dollars (EX6) in the amount of \$24.595 million will fund the continued development, integration, and testing of new capabilities and waveform enhancements for SINCGARS, WREN, TSM, and ANWf. Additionally, funding supports the next generation Government developed waveforms and Radio Service applications, system and architectural engineering for ANWf radio communications technologies, post deployment software support for fielded versions of the waveforms and radio services, program management support, and examine modular and open system architectures (MOSA) to make future integration and waveform porting more efficient. IAW NDAA Section 168, evaluate the maturity of multiple COTS NDI waveforms for LPI/LPD/LPG features, for the purpose of inclusion or integration into tactical radio programs.

<b>FY 2025 to FY 2026 Increase/Decrease Statement:</b> Increase is due to SINCGARS FH4 development activities ramp up in FY26.					
<b>Title:</b> Waveforms Test and Evaluation			1.346	2.606	3.893
<b>Description:</b> PdM Waveforms performs test and evaluation activities to address interoperability, range, scalability, resiliency, Electronic Warfare (EW)/Cyber Electromagnetic Activities (CEMA), and readiness. Advanced Networking Waveforms (ANWf) assessments support inclusion and/or integration of technologies into Army experimentation and Capability Sets (CS's) Viability and Readiness Assessments including Technology Readiness Level (TRL) assessment, test and evaluation of EW and cyber capabilities in support of Integrated Tactical Network (ITN), performance and behavior analysis of waveforms against topologies, architectures, operational use cases and fielding activities.					
<b>FY 2025 Plans:</b> Funding will validate continued design and system engineering activities of SINCGARS Frequency Hopping (FH) 3. Validate and test the enhancements and problem fixes of the WREN waveforms in support of future releases. Validate implementation of fielded eOTAM versions and provide performance characterization and analysis of waveforms to meet current and future warfighter's requirements. Conduct analysis of Advanced Networking Waveforms (ANWf) / Non-Developmental Items (NDI).					
<b>FY 2026 Plans:</b> Funding will validate continued design and system engineering activities of SINCGARS TRANSEC enhancements and evaluations of FH4 development. Warrior Robust Enhanced Network (WREN) developmental Release B Lab and Field based risk reductions in support of 1QFY27 full Release B. Validate and test the enhancements and problem fixes of the WREN waveforms in support of full Release B. Functional Qualification Testing (FQT) and NSA certification of eOTAM 2.2.1 in support of full release. Validate implementation of fielded eOTAM versions and provide performance characterization and analysis of waveforms to meet current and future warfighter's requirements. Conduct analysis of Advanced Networking Waveforms (ANWf) / Non-Developmental Items (NDI).					
<b>FY 2025 to FY 2026 Increase/Decrease Statement:</b> Increase due to addition of SINCGARS FH4 evaluation in support of new development activities in FY26.					
<b>Title:</b> Waveforms Software Support and System Engineering			3.920	2.219	1.813
<b>Description:</b> PdM Waveforms software support and systems engineering for waveforms and network manager applications provides the following: 1) Radio Services applications that enable over-the-air (OTA) NSA cryptographic key, radio and network configuration tools and bandwidth efficient OTA protocols supporting the Unified Network Line of Effort (LOE) for CSs.

<b>Remarks</b>					
<b>D. Acquisition Strategy</b>					
PdM Waveforms is responsible for core activities, includes analyzing, developing, and updating legacy and current waveforms that operate on multiple radio sets supporting network-centric operational warfare. Waveform developments (upgrading, developing, and maintaining) will generally be procured through full and open contract competitions or through leveraging other government agencies.

Appropriation/Budget Activity 2040 / 5	R-1 Program Element (Number/Name) PE 0605031A / Joint Tactical Network (JTN)	Project (Number/Name) EX6 / Waveforms
<p>While maintaining legacy and current networking waveforms, PdM Waveforms implemented a strategy which focuses on vetting and analyzing ANWfs. The product office continues to establish working relationships with industry partners within the waveform market. The strategy consists of conducting initial analysis of commercial waveforms, identifying implementation strategies, documenting and remediating vulnerabilities, and making recommendations to senior leadership on potential Army and other Services' use cases.</p>

EB4: CIRCM	-	10.959	11.691	10.789	-	10.789	-	-	-	-	-	-

**A. Mission Description and Budget Item Justification**

This funding line is a key enabler of the Army Modernization Priorities in support of the Aircraft Survivability Equipment (ASE) program. The Common Infrared Countermeasure (CIRCM) budget line includes funding to support the development and integration of Aircraft Survivability Equipment (ASE) products onto rotary wing and fixed wing aircraft.

**CIRCM (EB4)**

CIRCM is the next generation lightweight, laser-based Infrared Countermeasure (IRCM) component that will interface with the Army's Common Missile Warning System (CMWS), Limited Interim Missile Warning System (LIMWS), Advanced Threat Warner (ATW), and future Improved Threat Detection System (ITDS) to defeat current and emerging missile threats that use multispectral technology for rotary-wing, tilt-rotor and small fixed-wing aircraft across the DoD. CIRCM receives an angular bearing hand-off from the MWS, employs a pointing and tracking system which acquires the handed-over threat and tracks the incoming missile during and after motor burnout. CIRCM jams the missile by using modulated laser energy in the missile seeker band, thus degrading the tracking capability of the missile and causing it to miss the aircraft. CIRCM is utilizing Open Systems Architecture which allows flexibility with software and hardware refreshes. Tech insertions, when coupled with future threat acquisition and integration, will ensure CIRCM performance to keep pace with future threats. CIRCM is part of the suite of ASE Mission Equipment for Future Long Range Assault Aircraft (FLRAA).

The CIRCM A-Kit includes mounting hardware, wiring harnesses, and other components necessary to install and interface the mission kit on host aircraft. The A-Kit ensures the mission kit is functionally and physically operational with a specific host aircraft type. The CIRCM B-Kit is the mission kit (laser, pointer tracker, and processor) required to achieve near spherical coverage for an aircraft.

Fiscal Year (FY) 2026 Base Research, Development, Test, and Evaluation (RDTE) funding in the amount of \$10.789 million will fund A-Kit development, integration and test activities on multi-variant platforms, acquiring additional B-Kit test Line Replaceable Units (LRUs) in the support of development / testing activities, as well as threat and vulnerability analysis.

A. Mission Description and Budget Item Justification												
This funding line is a key enabler of the Army Modernization Priorities in support of Future Long-Range Assault Aircraft (FLRAA).												
The Common Infrared Countermeasure (CIRCM) budget line funding supports continuing A-Kit development, model-based systems engineering, and integration activities for rotary wing and fixed wing aircraft.												
CIRCM (EB4) CIRCM is the next generation lightweight, laser-based Infrared Countermeasure (IRCM) component that will interface with the Army's Common Missile Warning System (CMWS), Limited Interim Missile Warning System (LIMWS), Advanced Threat Warner (ATW), and future Improved Threat Detection System (ITDS) system to defeat current and emerging missile threats that use multispectral technology for rotary-wing, tilt-rotor and small fixed-wing aircraft across the Department of Defense (DoD). CIRCM receives an angular bearing hand-off from the Missile Warning System (MWS), employs a pointing and tracking system which acquires the handed-over threat and tracks the incoming missile during and after motor burnout. CIRCM jams the missile by using modulated laser energy in the missile seeker band, thus degrading the tracking capability of the missile and causing it to miss the aircraft. CIRCM is utilizing Open Systems Architecture which allows flexibility with software and hardware refreshes. Tech insertions, when coupled with future threat acquisition and integration, will ensure CIRCM performance to keep pace with future threats. CIRCM is part of the suite of Aircraft Survivability Equipment (ASE) Mission Equipment for FLRAA.												
The CIRCM A-Kit includes mounting hardware, wiring harnesses, and other components necessary to install and interface the mission kit on host aircraft. The A-Kit ensures the mission kit is functionally and physically operational with a specific host aircraft type. The CIRCM B-Kit is the mission kit (laser, pointer tracker, and processor) required to achieve near spherical coverage for an aircraft.												
Fiscal Year (FY) 2026 Base Research, Development, Test, and Evaluation (RDTE) funding in the amount of \$10.789 million will fund A-Kit development, integration and test activities on multi-variant platforms, acquiring additional B-Kit test Line Replaceable Units (LRUs) in the support of development / testing activities, as well as threat and vulnerability analysis.

## Note

Combating Weapons of Mass Destruction (CWMD) is a new start in FY 2026.

## A. Mission Description and Budget Item Justification

The Combating Weapons of Mass Destruction (CWMD) line supports test and evaluation efforts for overall chemical, radiological, and biological detection and protection for the warfighter for multiple programs of record, including the Advanced Radiological, Nuclear Detection Family of Systems (ARND FoS), the Vehicle Integrated Platform Enhanced Radiac (VIPER), and the Chemically Protected Deployable Medical System (CP DEPMEDS).

The Advanced Radiological, Nuclear Detection Family of Systems (ARND FoS) will provide an enhanced standoff, wide area/ networked detection capability to produce a radiological nuclear site picture depicting radiological hot spots and facilitating the detection of high priority areas of interest/focus on an objective. ARND FoS benefits the warfighter with the capability that will provide enhanced radiological and nuclear detection to support search and find of sources of interest for Sensitive Site Assessment (SSA) and Sensitive Site Exploitation (SSE).? In FY26, ARND FoS will continue performance and integration testing to validate the capability meets the defined requirement.

The Vehicle Integrated Platform Enhanced Radiac (VIPER) is a small radiation sensor that modernizes the Army's capabilities to monitor for platform crew exposure to radiological/nuclear (rad/nuc) hazards. The system mounts within the crew compartment of multiple U.S. Army ground and aviation platforms. The system provides gamma dose rate, gamma dose, and gamma/neutron (i.e., prompt) dose measurements in a small, ruggedized form factor. In FY26, VIPER will award a contract to build test assets and provide test/integration support.

The CP DEPMEDS program procures equipment to provide chemical and biological protection to US Army Role 3 field hospitals. CP DEPMEDS RDTE BA5 funding discontinues after FY24 to transition to procurement.

FY26 Base amount of \$13.387 million supports ARND FoS (\$5.387M) and VIPER (\$8.000M).

The FY 2026 request was reduced by \$0.028 million for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative."

**Note**

Combating Weapons of Mass Destruction (CWMD) is a new start within the Combating Weapons of Mass Destruction (CWMD) program in FY 2026.

**A. Mission Description and Budget Item Justification**

The Combating Weapons of Mass Destruction (CWMD) line supports test and evaluation efforts for overall chemical, radiological, and biological detection and protection for the warfighter for multiple programs of record.

The Advanced Radiological, Nuclear Detection Family of Systems (ARND FoS) will provide an enhanced standoff, wide area/ networked detection capability to produce a radiological nuclear site picture depicting radiological hot spots and facilitating the detection of high priority areas of interest/focus on an objective. In FY 2026, ARND FoS will continue performance and integration testing to validate the capability meets defined requirements.

The Chemically Protected Deployable Medical System (CP DEPMEDS) program procures equipment to provide chemical and biological protection to US Army Role 3 field hospitals. CP DEPMEDS RDTE BA5 funding discontinues after FY 2024 to transition to procurement.

The Vehicle Integrated Platform Enhanced (VIPER) is a small radiation sensor that modernizes the Army's capabilities to monitor for platform crew exposure to radiological/nuclear (rad/nuc) hazards. The system mounts within the crew compartment of multiple U.S. Army ground and aviation platforms. It provides gamma dose rate, gamma dose, and gamma/neutron (i.e., prompt) dose measurements in a small, ruggedized form factor. In FY 2026, VIPER will award a contract to build test assets and provide test/integration support.

<b>Remarks</b>			
<b>D. Acquisition Strategy</b>			
Advanced Radiological and Nuclear Detection Family of Systems (ARND FoS) will utilize a Defense Threat Reduction Agency (DTRA) developed ground and air radiological detection system and fund via MIPR to Other Government Agency (OGA) to develop and build systems in FY25 to support developmental testing in FY26 and FY27. Program office will also continue to develop the logistics support for the capability.			
The Chemically Protected Deployable Medical System (CP DEPMEDS) will revise the program's technical manuals and other logistics documentation to reflect changes resulting from the program's modernization and re-configuration efforts.			
The AN/VDR-3 Vehicle Integrated Platform Enhanced RADIAC (VIPER) will replace the obsolete AN/VDR-2 and AN/UDR-13. The VIPER provides platform crews with the capability to monitor their exposure to radiological and nuclear hazards. The program management office will complete an acquisition shaping panel white paper in FY 2025 and will begin to write documentation to prepare for program initiation in FY 2026. Upon program initiation a milestone event will occur, and a contract will be awarded to procure hardware, test systems, and begin integration onto army ground and aviation platforms in accordance with the CDD.

DM1: Detainee Management, Accountability, and Reporting	-	-	-	4.619	-	4.619	-	-	-	-	-	-

Note

Evidence Collection and Detainee Processing is a new start in FY 2026.

A. Mission Description and Budget Item Justification

Detainee Management, Accountability, and Reporting (DMAR) (Project DM1) will be comprised of both an enterprise (connected) and stand-alone (denied/degraded) software instantiation that provides Military Police Commands with the capability and capacity to operate a national-level registry to account for detainees and generate reports on Detainee Operations to provide national and international organizations as required by law.  
DMAR will provide a high degree of situational understanding in Near Real Time (NRT) across Joint Domain Operations (JDO) during Detainee Operations. DMAR will replace the currently fielded systems, Detainee Information Management System - Fusion (DIMS-F) and Detainee Reporting System (DRS) which are obsolete and facing End of Useful Life (EUL).

B. Program Change Summary (\$ in Millions)

C. Other Program Funding Summary (\$ in Millions) N/A		
Remarks No other funding is currently associated with this line.		
D. Acquisition Strategy FY26 New Start Program. Project DM1 acquisition strategy will leverage the Adaptive Acquisition Framework to deliver operationally and tactically relevant sustainable software capabilities to the Warfighter. The Program Office will research, analyze, and utilize legacy software system data crosswalks, form fields, and pathways to authoritative databases to initiate development of DMAR. The Program Office will use an iterative approach with frequent touchpoints to the using community to ensure regulatory requirements are met. This process will also inform the follow-on Capability Development Document (CDD).

EQ7: NBC Reconnaissance Vehicle (NBCRV) Sensor Suite	-	-	7.886	13.459	-	13.459	-	-	-	-	-	-

**A. Mission Description and Budget Item Justification**

The Nuclear Biological Chemical Reconnaissance Vehicle Sensor Suite Upgrade (NBCRV SSU) will modernize Chemical, Biological, Radiological and Nuclear (CBRN) components of the current Stryker NBCRV Sensor Suite to increase maintainability, reliability, maneuverability of the force, and standoff distance from the threats. NBCRV SSU enhances CBRN standoff capabilities and integrates onto robotic platforms for human machine integration (HMI), optimizing the Stryker NBCRV maneuver formations ability to conduct mounted CBRN reconnaissance and surveillance. NBCRV SSU benefits the warfighter by reducing the risk to force and mission, providing decision quality data to answer Commander's priority intelligence requirements facilitating risk-based decisions, ensuring freedom of action and maintaining maneuver momentum during large scale combat operations.

FY2026 Base RDTE funds in the amount of \$13.459 million will be used to complete integration of Capability Set 2.2 (CS2.2) and continue CS2.2 development and operational testing.

The FY 2026 request was reduced by \$0.304 million for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative."

Appropriation/Budget Activity 2040 / 5	R-1 Program Element (Number/Name) PE 0605038A / Nuclear Biological Chemical / Reconnaissance Vehicle (NBCRV) Sensor Suite	Project (Number/Name) EQ7 / NBC Reconnaissance Vehicle (NBCRV) Sensor Suite
C. Other Program Funding Summary (\$ in Millions) N/A		
Remarks		
D. Acquisition Strategy Nuclear Biological Chemical Reconnaissance Vehicle (NBCRV SSU) program will integrate modular mission payloads onto platforms via a FAR based Sole Source contract in FY 2025-FY 2027, beginning component level testing in FY 2025 and system level testing FY 2027 through FY 2029 to achieve First Unit Equipped (FUE) in FY 2030. NBCRV SSU received an updated acquisition strategy on 07 April 2025 that aligned to support updated Army Priorities. Future procurement is aligned to support incremental capabilities for CBRN reconnaissance platforms. Capability Set 2.2 (CS2.2) will pivot to support the updated Army focus to deliver CB sensing payloads to the force. A new CDD will be developed to support the Army pivot with anticipated approval in FY26.

## Note

CY5: No funding requested in FY 2025 and beyond due to program divestment. Army approved program termination 11 June 2024.

XU3: Tactical DCO-I funding enables the Army's Next Generation Command and Control (NGC2) initiative to modernize Command and Control (C2) systems.

EV5 (Realigned): FY 2025 Defensive Cyber Operations (DCO) funding was realigned from PE 0605041A Project EV5 to PE 0608041A Defensive Cyber Software Prototype Development.

## A. Mission Description and Budget Item Justification

- Cyber Situational Understanding (Cyber SU): No funding requested in FY 2025 and beyond due to program divestment. Army approved program termination 11 June 2024.
- Tactical DCO-I (TDI) is a software only program that consists of pre-configured DCO applications that enable local and remote Cyber defenders to conduct cyberspace surveillance, and maneuver against an adversary traversing within the tactical network. The TDI capability is hosted on the Army's Tactical Network and will reside within the Command Post at the tactical level (up to Army Service Component Commands).
- FY 2026 funding in the amount of \$3.611 million will support the completion of development engineering and integration of CR 7, CR 8, and CR 9 and beyond including development engineering to collate and aggregate TDI data from various echelons; convergence with Tactical Data Fabric to align with Army Data Strategies, and implement Security Operations, Automated Response contractor and matrix support.

## A. Mission Description and Budget Item Justification

Cyber SU is a software-only, mission command application designed for use by maneuver commanders at the tactical level (Infantry, Armor, Stryker Brigade Combat Teams, Division, Corps, and Army Service Component Commands). Cyber SU is the first application of its kind designed for maneuver commanders focusing on tactical/expeditionary combat operations to detect and mitigate cyber and electronic warfare threats and assist with decision making during combat operations.

Cyber SU produces a Cyber Electromagnetic Activity overlay on the commander's Common Operational Picture within the Command Post Computing Environment / Tactical Services Infrastructure. Unlike Enterprise Cyber Mission Force(s) Tools, Cyber SU was designed using the CPCE Software Development Kit; to operate within the constraints of Tactical Services Infrastructure hardware, a bandwidth constrained tactical environment and support Common Operating Environment standards in the Army's Command Post. The underlying Cyber SU framework is also being leveraged by the US Air Force to ensure alignment with the Combined Joint All Domain Command and Control. The Army will ensure Cyber SU has an open systems architecture and will continue to explore options to integrate Cyber SU functionality and data ingests between other Services as well as explore insertion of third-party technology within the Cyber SU solution.

Cyber SU provides the maneuver commander the ability to visualize and understand any cyber related impacts/threats to physical (geographical), logical (at a specific network internet protocol), and cyber persona layers (bad actors, from individuals to nation states) of tactical cyberspace data. Supporting Cyber Electromagnetic Activity, Cyber SU ingests existing data sources from related programs (e.g., Tactical Defense Cyber Operations Infrastructure, Command Post Computing Environment, Electronic Warfare Planning and Management Tool, Unified Network Operations, Distributed Common Ground System-Army, Data Distribution System), synchronizes and integrates blue (friendly), red (enemy), and grey (commercial/private sector) data and enables collaboration therein at the tactical edge.

Cyber SU addressed the principal capability areas from its first Information Technology Box (FY2020 - FY2024), including See Yourself (Initial Capability), See Your Cyber Battlespace, and Understand Your Cyber Battlespace. Cyber SU Information Technology Box requirements will not be renewed.

To better meet Army needs, Cyber Electromagnetic Activity requirements captured in the Cyber SU System-Initial Capabilities Document are being subsumed into requirements documents for Informational Dimension, Electronic Warfare Planning & Management Tool. Next, the Unified Network Operations, Lower Tactical Tier, and Upper Tactical Tier requirements.

Remarks					
N/A					
D. Acquisition Strategy					
The Cyber SU System-Initial Capabilities Document was approved on 18 July 2018 by the Joint Requirements Oversight Council. The Requirements Definition Package was approved on 19 March 2019 by the Army Requirements Oversight Council Requirements Board. The program is utilizing an evolutionary and tailored acquisition approach under which Cyber SU will develop a series of testable, integrated subsets of capability to meet the overall functional values.					
Program Executive Office, Command, Control and Communications-Tactical, the Milestone Decision Authority, approved the Materiel Development Decision on 20 June 2018, designating Cyber SU as an Acquisition Category (ACAT) III program. Milestone B was approved on 8 April 2020.					
Execution of the Cyber SU program was a combination of government entities and commercial vendors. The program awarded a competitive prototyping/development Other Transaction Authority in 3QFY2020 to develop the initial Cyber SU capability. An Other Transaction Authority modification was awarded in June 2021, which extended the scope of the OTA to encompass See Your Cyber Battlespace and Understand Your Cyber Battlespace through Full Deployment FY2024. The Army has decided not to revalidate the Information Technology Box requirements and instead realign those requirements to better suit the Army's Vision for 2030. In October 2023, the Cyber Capability Development Integration Directorate issued a memo to begin the process of Cyber SU divestment. The Army approved program termination on 11 June 2024.

Quantity of RDT&E Articles	-	-	-	-	-	-	-	-	-	-		
Note This funding enables the Army's Next Generation Command and Control (NGC2) initiative to modernize Command and Control (C2) systems.  Beginning in FY2023, TDI funding transitioned from 0608041A CD1 Defensive Cyber- Software Prototype Development (BA-8 Software Pilot Program) to project code XU3 (Tactical DCO-I) within PE 0605041A Defensive CYBER Tool Development. TDI is funded with RDT&E only for development, engineering, testing, training development, and program management.  <b>A. Mission Description and Budget Item Justification</b> TDI is a software only program that pre-configures DCO applications to allow local and remote Cyber defenders the ability to conduct cyberspace surveillance and maneuver against an adversary traversing within the tactical network.  The TDI capability includes: 1) Mission Protection: Ability to automate deployment of DCO tools to protect the virtual server environment of the Command Post Computing Environment. 2) Discovery/Counter-Infiltration: Ability to auto detect multiple virtual cyber threats and facilitate the mitigation/denial of adversarial actions. 3) Cyberspace Support/Readiness: Allow global and regional cyberspace defenders to assist units with countering advanced persistent threats.  TDI follows a five-year, Information Technology (IT) Box construct to deliver capability over time, based on approved requirements. In IT Box (FY 2023-2027), TDI will develop Capability Releases (CR) (CR 1 - CR 12) to implement TDI software change activities and updates to provide value to Brigades to ASCCs. CR 1 collated and aggregated TDI data from various echelons and presented it into rolled-up status dashboards reflecting various roles and responsibilities. CR 2 integrated Security Orchestration, Automation, and Response and with Big Data Platform to initiate alignment with the Army's tactical data fabric efforts. CR 3 and CR 4 leveraged Artificial Intelligence/Machine Learning models generated from BDP and implemented it at the tactical edge. CR 5 and CR 6 supported capabilities and technologies to address emerging cyber threats and techniques, tactics, and procedures.  FY 2026 funding in the amount of \$3.611 million will support the completion of development engineering and integration of CR 7, CR 8, and CR 9 and beyond including development engineering to collate and aggregate TDI data from various echelons; convergence with Tactical Data Fabric to align with Army Data Strategies, and implement Security Operations, Automated Response contractor and matrix support.

<b>Appropriation/Budget Activity</b> 2040 / 5	<b>R-1 Program Element (Number/Name)</b> PE 0605041A / <i>Defensive CYBER Tool Development</i>	<b>Project (Number/Name)</b> XU3 / <i>Tactical DCO-I</i>
<p><b>D. Acquisition Strategy</b></p> <p>The Milestone Decision Authority, approved the TDI Materiel Development Decision on 13 April 2018, designating Tactical DCO Infrastructure as an Acquisition Category (ACAT) III program. In July 2019, the MDA approved an execution strategy based on a tailored defense unique software intensive acquisition approach and designated the Full Deployment Decision as the entry point into the acquisition life cycle. The FDD was approved on 30 September 2019. On 23 November 2021, the MDA re-designated TDI an ACAT IV program based on cost and low risk and complexity, and delegation MDA to the Project Manager (PM) Mission Command.</p> <p>The TDI program requirements were approved under an Information Technology (IT) Box construct with a five (5) year term, with multiple capability deliveries expected within each IT Box. Full Deployment is defined as when TDI has completed the development and testing of the last capability release within the IT Box and has transferred that capability to the Command Post Computing Environment/Tactical Services Infrastructure (CPCE/TSI) program for fielding.</p> <p>Full Deployment for the first IT Box (FY 2018-FY 2022), which consisted of three Capability Drops, was achieved with the delivery of CD 3 (1.3.4).</p> <p>IT Box #2 (FY 2023-FY 2027) consists of multiple Capability Releases (CRs) intended to implement TDI software change activities and updates aimed at providing value to Brigades - ASCCs more quickly. The CRs include software enhancements, and maintenance (defect repair, adaptations, updates, and reconfiguration) and cybersecurity updates. In order to bring the program into alignment with the Army of 2030 paradigm, the Capability Drop methodology has been replaced by the Capability Release methodology that enables TDI to be delivered more frequently throughout the year. Configuring the technical roadmap into smaller capability releases implements the agile development principles under a Continuous Integration/Continuous Delivery construct, which serves to increase reactivity to cyber threat profiles by allowing updates and patches to be pushed on a more consistent basis and soldier Touchpoint based feedback to be included more rapidly. CR 1 collated and aggregated TDI data from various echelons and presented it into a rolled-up status dashboards reflecting various roles and responsibilities. CR 2 integrated Security Orchestration, Automation, and Response (SOAR) and with Big Data Platform (BDP) to initiate alignment with the Army's tactical data fabric efforts. CR 3 and CR 4 leveraged Artificial Intelligence/Machine Learning models generated from BDP and implement it at the tactical edge. CR 5 and CR 6 supported capabilities and technologies to address emerging cyber threats and techniques, tactics, and procedures. CR 7 and beyond will collate and aggregate TDI data from various echelons, convergence with the Tactical Data Fabric to align with Army Data Strategies and implement SOAR.</p> <p>TDI utilizes government entities to develop and integrate software capabilities.</p>
